## **US warns Iraq** over any future threats to Kuwait

Armed with a new United Nations resolution warning of "serious consequences" if Iraq once again menaces Kuwait, the US threatened immedi-ate military action for any repetition of this month's huge Iraqi troop build-up near the Kuwaiti border. Warren Christopher, US secretary of state, said the UN resolution, passed unanimously by the security council late on Saturday night, put Iraq's President Saddam Hussein "on notice . . . that he must not again threaten Kuwait". # Kohl coalition claims victory in close-run German election

Ruling parties likely to remain in power with wafer-thin majority

By Quentin Peel in Bonn and Judy Dempsey in Berlin

Chancellor Helmut Kohl claimed victory last night in the German election, but looked set to rule with at best a wafer-thin majority for his conservative-liberal coali tion. The final result depended on the success of a handful of candidates belonging to the reformed communist party in east Germany.

The first projections of the outcome suggested the coalition would have a majority of between three and 10 seats over the combined forces of the left the Social Democratic party (SPD), the Green party, and the party of Democratic Socialism (PDS), the former communist party.

According to voting projections from the government statistical office in Berlin, the PDS would win four direct seats, one more than the minimum necessary to get its full proportional representation in the Bundestag, estimated at around 27 seats. Mr Kohl last night described

the predicted outcome, a majority of less than 10, as "a perfectly good working majority". He said the ex-Chancellor Helmut Schmidt had governed with a majority of just 10 in 1976.

The projections suggest that we have won the all-German elections," Mr Kohl told cheering party workers in Bonn.

HOW THEY VOTED (8pm exit polis)

	% of
CDU-CSU Free Democrats	41.8
Social Democrats	36.6
PDS	3.9
Alliance '90-Greens Others	6.9 3.9

Mr Rudolf Scharping, the SPD leader, appeared to be conceding defeat, when he said the coalition appeared to have a majority of e, two or three."

"It has been very narrowly endorsed," he said, "and therefore it is a coalition of losers." He said Mr Kohl was determined to go on with his present alliance, but he claimed: "We have a very strong position. We will use it to promote our policies of social justice and economic growth."

The biggest losers on the night were the Free Democratic party (FDP), the minority partners in the ruling coalition, who were set to lose about 30 seats.

In spite of the setback, how-ever, a delighted Mr Klaus Kin-kel, the party leader and foreign minister, was last night celebrating, because with its vote forecast at about 7 per cent of the vote, the party would keep

its place in the parliament. Mr Kohl's own Christian Democratic Union, with its Bavariabased sister party, is set to remain the largest group in the future Bundestag, with some 284 seats, against around 250 seats for the Social Democrats. Neither has an absolute majority alone, so the smaller parties in the elec-

coalition possibilities.

The forecasts would allow two possibilities for the future German government to the current alliance - a grand coalition between the CDU/CSU and SPD, or a so-called "rainbow coalition" between the SPD, Greens and

tion - the PDP, PDS and the

Greens - will dictate the final

However, both are less likely than the continuation of the present government. Mr Wolfgang Schäuble, parliamentary leader of the CDU/CSU group, said the result was "still a victory", and the coalition would continue. But Mr Ludger Vollmer, joint leader of the Greens, warned that the coalition would be unstable.

and Kinkel will be able to survive a full four years," he said. The Greens succeeded in regaining their seats in the Bundestag with about 7 per cent of the

# New York State plans takeover of power company

By Richard Tomkins in New York

The State of New York has decided to buck the worldwide trend towards privatisation by nnouncing plans for a \$2.53bn takeover of the Long Island Lighting Company, a private sec-tor electricity company quoted on the New York Stock

Exchange.
While some electricity companies in the US have always been publicly owned, this is believed to be the first time a state has proposed buying out the share-holders of a private-sector company and bringing it into public

Mr Mario Cuomo, the Demo-cratic governor of New York State, says the aim is to reduce electricity prices for Long Island consumers and business present, the rates charged by the Long Island Lighting Company -known to its few friends as Lilco - are the highest in the US, if not the world.

The bid is likely to prove popular with the voters of Long Island. Significantly, it also hap-pens to have been launched at a time when Mr Cuomo is locked in a fierce battle for re-election.

Lilco's electricity prices are high because the company is bur-dened with \$5.3bn worth of debt, the legacy of spending \$5,5bn between 1973 and 1984 building a nuclear power station at Shorebam on Long Island, which was dismantled because of public concerns about safety.

At present, Lilco's electricity rates are 16.1 cents per kWh for residential customers and 12,35 cents for industrial customers, roughly double the US average. Mr Cuomo says a takeover by the state will result in an immediate 10 per cent cut in those rates. historic shift for Finland, ruled plus another 10-15 per cent cut by Moscow until 1917, away from

The financial logic of the bid is beguiling. Mr Cuomo says that, under public ownership, Lilco will no longer need to pay federal taxes or shareholder dividends, resulting in immediate savings of \$250m e year. Later, its debt will be refinanced with cheaper public sector debt. The bid itself will be financed through an issue of

# Finland votes decisively for EU membership

By Hugh Carnegy in Heisinki

Finland voted decisively to join the European Union yesterday in Sweden and Norway has been the first of three Nordic ballots that could enlarge membership of the EU from 12 to 16.

The final result showed 57 per cent in favour of membership and 43 per cent against on a turnout of 74 per cent. The outcome was welcomed by Mr Esko Aho. the Finnish prime minister. However, the margin was less

than pro-EU supporters had hoped for, and fell below Austria's more convincing Yes vote of over 56 per cent in June. The toughest test for EU enlargement is still to come, as opposition to membership in

much stronger than in Finland and Austria. Both Sweden and Norway are due to hold referendums next month.

Both the Social Democratic leadership in Sweden and the Labour party government in Norway looked to Finland for added momentum in their campaigns for a Yes vote.

The Finnish vote was scheduled first in the hope of achieving a Nordic domino effect. The three countries have close ties through the Nordic co-operation organisation and pursued their EU applications in concert.

Result may boost Yes campaigns in Norway, Sweden In Sweden, which is next to vote on November 13, most opinion polls have shown a slight but unsteady lead for the Yes side since the summer. In Norway, where a referendum will be held on November 28, the No camp continues to hold a solid lead. But a weekeod opinion poll for the first time showed a clear majority for membership based on a Yes in both Finland and Sweden. The poll showed 48 per

# Ford to pay \$50m for 7% stake in Indian carmaker

By Kevin Done, Motor Industry Correspondent

Ford of the US, the world's second-largest vehicle maker, is taking a minority stake in Mahindra & Mahindra, one of the top 10 private sector groups in India.

Ford's move into the fast-growing Indian market follows recent, similar initiatives by several leading carmakers, including General Motors, Volkswagen, Mercedes-Benz and Daewoo. They are scrambling to establish a presence in newly emerging markets, particularly Asia and Latin America.

Ford said it would pay about \$50m (£31.6m) for a 7 per cent stake in Mahindra & Mahindra, the automotive and tractor man-

The two companies are to launch a feasibility study into the manufacture of Ford vehicles in India, which should be con-cluded by mid-1995. It is expected to lead to a joint venture company with equal Ford and Mahin-dra shareholdings, which will set up a new plant - probably for the assembly of vehicles developed by Ford in Europe.

stake in the Indian group must be approved by Mahindra shareholders at a meeting on Novem-

ber 10. Mr Alex Trotman, Ford chairman and chief executive, said the US carmaker intended "to be a significant participant in India's automotive industry in the near future". Last year, Ford started production of aluminium radiators in a plant near New Delhi in a joint venture with Sumitomo and Maruti. In other moves this year in

• GM of the US has formed a joint venture with Hindustan Motors to invest about \$100m to assemble the Opel Astra, GM's best-selling car in Europe, with production planned to begin in the third quarter of

· Mercedes-Benz, the automotive subsidiary of Daimler-Benz of Germany, has formed a joint venture with Tata Engineering & Locomotive (Telco) of India, one of the world's leading makers of commercial vehicles, with an investment of about DM250m (£102.4m) for the assembly in CONTENTS

Ford's acquisition of a minority India of Mercedes-Benz R-Class executive cars as well as petrol and diesel engines. Daimler-Benz holds a stake of just over 10 per

cent in Telco. Volkswagen of Germany, the leading European carmaker signed a memorandum of under standing last month with Richer Goodearth to study the feasibility of joint vehicle prodoction in India. The Eicher group produces Mitsubishi light commercial vehicles under licence in

· Daewoo, the South Korean conglomerate and the country's third-largest carmaker, has bought a majority stake in DCM-Toyota, an Indian truck maker, which it plans to transform into a carmaker under the name DCM-Daewoo Motors.

Volkswagen said that Asia offered the strongest prospects for growth in the world car market - annual sales in India are expected to double to between 450,000 and 500,000 by 2000. The Indian car market is dominated by Maruti, a car produced through a joint venture between the Indian government and Suzuki of Japan.

# Balladur acts to curb upheaval

By John Ridding in Paris

Mr Jose Rossi, general secretary of France's Republican party, was vesterday appointed minister for trade and industry in the country's comre-right government, repla-cing Mr Gérard Longuet who resigned on Friday following ladur in his undeclared contest with Gaullist rival Mr Jacques growing allegations of corrup-Chirac for the conservative

The swift appointment and the decision not to implement a broader cabinet reshuffle. reflect Prime Minister Edouard Balladur's attempt to limit the upheaval in his government with presidential elections little more than six months

Mr Balladur is seeking to play down the effects of the corruption scandals that have rocked the administration and which have prompted the resignation of two cabinet ministers in the past three

The appointment of Mr Rossi enables Mr Balladur to maintain the balance between the various parties in the ruling

RPR-UDF coalition. The Republican party, which is still headed by Mr Longuet, is the largest element of the UDF. Mr Rossl, 50, is thought to be to the right of the Republican party and is considered a potential supporter of Mr Bal-

candidacy in next year's presidential election. The new minister will inherit a hroad and sensitive hrief. In addition to trade and industry, the position also covers postal services and tele-

Mr Rossi will be presented with some important projects not completed at the time of Mr Longuet's resignation. These include the search for industrial partners for Groupe Bull, the loss-making computer manufacturer. Mr Longuet was also pushing for reform of the legal status of France Télécom. which would allow the exchange of equity investments with other international

tion at his prime minister's Matignon office on Friday evening, Mr Gérard Longuet, the industry minister, described himself as calm and serene. He claimed he could now counter allegations of corruption concerning the financ-ing of his Saint Tropez villa and a separate probe into the funding of his Republican

nnouncing his resigna-

For Mr Edouard Balladur. the prime minister, however, it is difficult to be so sanguine. Mr Longuet leaves a government badly shaken by corruption investigations which are threatening Mr Balladur's pres-idential aspirations and which have prompted comparisons with Italy's "clean hands" antigraft campaign. Mr Longuet's departure com-

pounds the blow sustained by the government a few days ear-lier when Mr Alain Carlgnon. the former communications minister, was detained in a Lyon jail. Mr Carignon had resigned in July after being accused by an investigating magistrate of receiving illicit payments in return for the award of public works contract in Grenohle, where be is

Although less dramatic, Mr Longuet's resignation is more

significant. A heavyweight in of the European Commission France's centre-right adminis- and a possible socialist canditration, the industry minister is the most senior figure yet ensnared by the corruption probes which are rocking French politics and business. His departure represents a landmark in the investigations and demonstrates the

Increased vulnerability of French establishment figures. For Mr Balladur, the events of the past week add up to his most serious challenge since his centre-right administration took office last year. In addition to the damage wrought by two ministerial resignations. his personal amhitions have been undermined. With his eyes set on next

spring's presidential elections, the Franch prime minister looked to Mr Longuet as a vital ally in his bettle with his Ganllist rival, Mr Jacques Chirac, for the conservative candidacy in the forthcoming polls. The French prime minister

now finds his strategy and his standing undermined. "It is no longer a question of cracks hut of gaping holes in the Balladur system", said Liberation, the daily newspaper, in an editorial. Le Figaro, the conservative daily highlighted the tive daily, highlighted the growing threat posed by Mr Jacques Delors, the president

date in the French presidential elections, who has closed the gap on Mr Balladur in recent opinion polls.

Corruption rocks French ship of state

Resignations have holed Balladur's government and ambitions, writes John Ridding

The risk is that the corruption affairs affecting his government may not be so easily tamed. A report into the party by Mr Reynand Van Ruymbeke, an investigating magistrate, could drag other senior party figures into the firing line, including Mr Francois Léotard, the defence minister, and Mr Alain Madelin, minister for economic develop-ment and small husinesses.

Of broader concern, are the growing wave of probes which have seen the chairmen of some of France's largest business groups, from Saint Gobain, the glass and building materials company, to Alcatel Alsthom, the transport, teleplaced under investigation for alleged corruption. The cases have ensured that corruption will he a central theme in the presidential polls and have fuelled pressure for an Italian-style "clean hands" operation.

Mr Balladur, along with other senior politicians and businessmen, deny that corrup-tion is endemic in France and

Mr Balladur tells Mr Mitterrand in this morning's Le Monde: Right, I will answer for those locked up or elsewhere

reject the comparison with Italy. He argues that the spate of investigations reflects a freer hand enjoyed by the judiciary in pursuing cases which mostly date back to the 1980s. Mr Pierre Méhaignerie, the justice minister, concurs. "We are cleaning up the problems of the past. On the ground, cor-ruption is receding."

There is some truth in these

claims. The case involving the Republicans, for example, centres on allegations that the party received illicit funds and favourable terms for the construction its Paris headquarters between 1987 and 1991. Few would claim, however. that the problem of corruption is resolved.

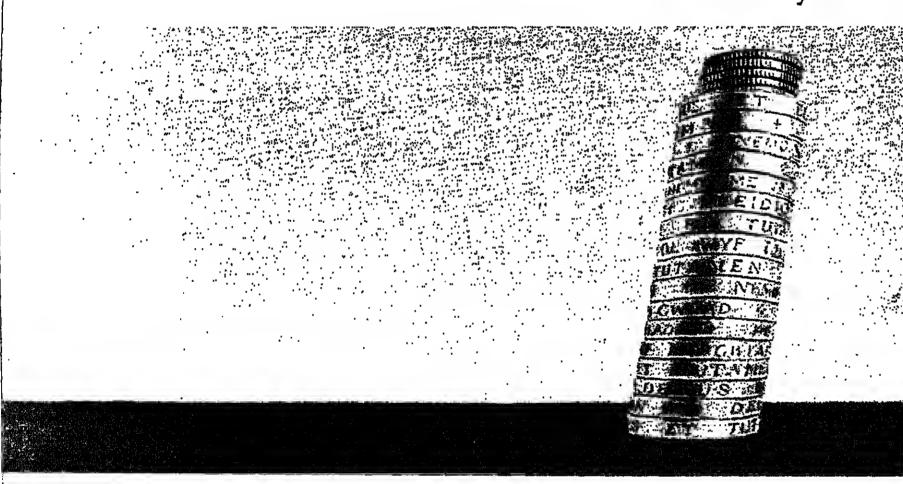

Despite his initial claims that the existing legislation

will resolve the problem, Mr Balladur has bowed to mounting pressure and proposed a strengthening of safeguards against corruption. He is call-ing for a panel to perform an annual audit of the assets of ministers, MPs and senior local officials. He also proposed that prefects, the chief government representatives in the regions. be empowered to suspend suspect public works contracts.

For some, however, such proposals do not go far enough. Mr Thierry Jean-Pierre, an investigating magistrate, and now a Euro-MP, demands increased resources for magistrates investigating political and white collar corruption and the formation of judicial teams to specialise in financial cases. According to Mr Jean-Pierre, failure to act swiftly against corruption will push France down the road to "ftalianisation", undermining political institutions and playing into the hands of demagogues such as Jean-Marie le Pen, leader of the extreme right

National Front. Such an analysis, is itself, extreme. But the rising wave of corruption probes have already rocked the French ship of state. Mr Balladur has yet to show that he can eteer it back

Save up to 16% on business fares to Italy.

With our new three-day executive fare, you can save a towering 16% off the standard Business Class fare to Italy.

All we ask is that you fly out from London and return within three days.

This means you can make a meeting in Milan from just £350 instead of £416. Or address friends. Romans and countrymen from only £450 rather than £524.

(And note that the Business Class Same Day Return fare is still £100 less than the stundard fare).

You'll find the service has improved, too. While sipping your welcome drink on board, for example, you might like to study the menu, which now has a choice of hot or cold cuisine - including Italian specialities.

On the ground, there are dedicated checkin desks and lounges at Rome and Milan.

Even Club Ulisse bas a new angle: members earn double points on flights to Italy until December 31st.

# Fears grow that Brussels will turn into Babel

By Emma Tucker in Brussels

Against the sombre backdrop of high unemployment, there are a few Europeans for whom job offers are overflowing: Finnish Portuguese speakers, Greeks able to translate complex documents into Norwegian, not to mention Spanish natives well versed in Swedish.

As Brussels prepares to open its arms to Norway, Sweden, Finland and Austria, the language services of the European Commission, parliament and council of ministers, are busily recruiting interpreters for the extra languages the newcom-ers will bring to European pro-

ceedings.
The cost of expanding the already elaborate language services has caused consternation in certain quarters. One speculation is that the total number of language combinations necessary at any official meeting will rise from 72 to 132; new booths will have to be built to house the translators, and the mound of printed translations

will topple over. Conservative MEP James Elles believes the EU's commitment to translate official documents into all nine, soon 12, languages, and to provide comprehensive translations at official meetings is unreelistic, and a drain on the public

"Can we really assume that all documents and all meetings can be covered in all the necessary languages? Why is it that an international institution such as the EU needs to have every single document in every single language when the United Nations and the Council of Europe seem able to oper ate with only a few?" he asks. Mr Elles, says the commisslon, exaggerates. First, the translation service commonly uses a "pivot" system for simultaneous translations. This means that a central interpreter translates from the less well-known languages,

or English, from which other interpreters then translate into, for example, Portuguese. "You don't have to have someone in the Danish booth who can translate into Portuguese or Greek," said a com-mission official. "The system is not perfect, as it slows down the rate of translation, but It does reduce the number of lan-

such as Danish, into a com-

monly-used one such as French

guage combinations." Second, at least as far as the commission is concerned, officials take a pragmatic approach to which language they use for everyday business. "The parliament, for all the usual democratic reasons, has to work in all the languages of the member states, whereas the commission just gets on with things in the three official languages: French, German and English," said an official As for documents, "we are reinforcing our language teams in order to produce documents in the final language, but that

is an obligation to the outside All this, says the commission, creates the need for about 400 extra language posts. A far more pressing problem is find-ing jobs at all levels of the commission for civil servants from the new member states.

needs to be found for about 1,300-1,700 Finns, Swedes, Austrians and Norwegians. In the past, space was created by offering golden handshakes to existing staff, but Mr Karel Van Miert, commissioner responsible for personnel issues, has ruled out this

approach as too expensive. Demographic factors could, however, come to his rescue. "The commission was set up in the 1960s, so people who joined then in their 30s are now retiring," pointed out an official. "If you allow for a lengthy transition period, we should be able to absorb the newcomers fairly

But this approach creates a problem: it will stop virtually all recruitment of existing member states for four to five years, something which certain countries, notably Spain and the UK who are under represented at the commission, may be unwilling to accept.

Meanwhile, tension over lan-

guage in the Commission press room is rising, with non-French speaking journalists increasingly unhappy about the obligatory use of French at the midday hriefings, for which no translation is provided.

Many non-French-speaking journalists do not understand the proceedings and have to put questions in faltering French to English-speaking spokesmen and women, who are obliged to answer in

French. "Je veux demander une ques tion sur les bent bananes," is not untypical of the type of mangled questions asked. With the arrival of the three Nordic countries and Austria, the case for providing an English trans-lation in the press room is strengthening. Last week journalists voted in favour of such a move. Their wish, however, may not be granted. Commis-sion officials fear that allowing in English means allowing in German, and Italian and Spanish and so on. This, they say,

would be too expensive. Further, Mr Jacques Delors, it is said, does not want to go down in history as the French president of the Community who allowed English into the press room.

# Muted effect on markets expected

GERMAN economists and is expected to ELECTIONS remove an ele-October 16 ment of uncer-teinty from financial merkets. Both the bond and stock markets have swing from pessimism about the possibility of an opposition victory to optimism and gains last week as polls showed Mr Kohl's government was likely to be re-elected. Although early

results indicated Mr Kohl's majority would be wafer-thin, there was relief that the Free Democrats (FDP), the junior coalition party, had succeeded in re-entering the Bonn parliament after failing in recent state elections.

Because a victory for Mr Kohl, head of the Christian Democratic party (CDU), had been discounted in financial markets, economists did not expect bond and equity markets to show further gains

today.
"If the results are as the exit polis suggest, the affect on markets will be rather modest," said Mr Kermit Schoenholtz, senior economist at Salomon Brothers International in London. "I would not be surprised to see the initial reaction rather muted," agreed Mr Richard Reid, Frankfurt based economist with UBS Global Research. Noting that bond markets had been affected by concern over global inflation, he said Mr. Kohl's likely victory had now removed any extra rates.

worries over political stability

"This has got to be good for bonds and stocks," he added. Even though the majority of the Bonn coalition, also including the Christian Social Union (CSU) of Bavaria, looked thin. he said: "These coalitions tend to work very closely."

He thought, too, the election result should make easier the Bundesbank's job of controlling the money supply and inflation. "It removes a big question mark." Ever since unification in 1990, the year of the last general election, the central bank has been concerned about the impact on prices of the high public spend-ing needed to rebuild the east

German economy.

Despite the coalition's apparent victory over the Social Democrats (SPD), Ms Alison Cottrell, international economist at Kidder Peabody's London operation, noted "it's going to be a very splintered parliament". The Greens won more seats and the east Ger-man-based Party of Democratic Socialism (PDS) looked likely to benefit from discontent in

Thus ehe thought that, while markets would react favourably to last night's result, investors and traders might consider Mr Kohl'e freedom of manoeuvre - especially in fis-cal policy - to be more limited.

As for the Bundeshank, she said the reaction there might be one of caution. If budgetary and tax packages, needed to continue paying the high cost of German integration, took too long to get through parliament, "the Bundesbank might flex its muscles". But this did not mean it would immediately

put interest rates up. Mr Schoenholtz thought the central bank could take comfort from steady economic growth which did need not need the aid of lower interest

# Kohl win removes uncertainty All party leaders find some cause for comfort

Chancellor Hslmnt Kohl eppeared beaming with self-confidence in front of his Christian Democratic Union party workers, declaring his water-thin majority, and the party's worst vote since 1949, a victory.
The CDU and its Bavaria-

based sister party, the Christian Social Union, remains the biggest single group in the Bundestag, but government will be difficult. Mr Rudolf Scharping, the Social Democratic party (SPD) leader, has failed to dislodge

Mr Kohl from his office. But he was able to cheer a 3 percentage-point improvement in the party's score, to around

37 per cent of the vote. He denounced the Kohl coalition as "a coalition of losers", although he had failed to win. As for Mr Klaus Kinkel, the foreign minister and leader of the Free Democratic party (FDP), anyone might have thought he had won, as be burst, confetti-covered, into his party headquarters.

happy," he said. "It was incredibly difficult to get there." What he meant was, getting back into the Bundestag at all. For the FDP had lost ground from 11 per cent of the vote last time to around 7 per cent yesterday, seeing its representation slump by 30 seats to under 50 in the 658-member parliament

In the other three state elections yesterday - In the Saar-land, Mecklenburg-Vorpom-mern and Thuringia - the FDP failed to cross the 5 per cent hurdle needed to get into the state parliaments. But it managed it in the federal parliament, which means that Mr Kohl'e coelition can just sur-

The man who really bad cause to celebrate, however. was Mr Gregor Gysl, the parlia-mentary leader of the PDS, the Party of Democratic Socialism, based on the old communist party of East Germany.

For according to mid-evening predictions, he and his colleagues were set to win four seats in east Berlin outright on the first vote, giving the party the right to full parliamentary representation of around 27

"It would have been good if we could have forced a change of government," he said. "But

SPD leader Rudolf Scharping gets a kiss yesterday from a wellwisher in Lahnstein

The PDS is also left holding the balance of power in both the east German states which

toric achievement, because we did it against the opposition of all the other parties."

According to the latest projections, the party polled 23.2 per cent in Mecklenburg Vornarries will have to form e coalition, unless the SPD does a deal - against everything the pommern, against 38.9 per cent for the CDU and 27.8 per cent party leadership has promised - with the PDS.

for the SPD.

against 43.2 per cent for the CDU and SPD 28.9 per cent. Neither the FDP nor the Greens managed to gain 5 per cent, leaving the PDS again controlling the balance of

The one party which suffered a complete defeat was the far-right Republicans, who looked unlikely to gain even 2 per cent of the vote, leading most political commentators to predict e total eclipse of the coming years.

The support of the PDS remains overwhelmingly in east Germany, where the party was forecast last night to win some 19.2 per cent of the vote, against just 0.9 per cent in west Germany.

The largest party in the east remains Mr Kohl's CDU, with a predicted 39.7 per cent, while the SPD was expected to win

31.5 per cent. In the Saarland, the third state to vote yesterday, Mr Oskar Lafontaine of the SPD narrowly retained his overall majority but saw a drop to around 50.1 per cent of the vote, compared with over 54 per cent four years ago.

Yet again, the FDP failed to get into the state parliament, although the Greens were on the verge of doing so, with 4.9

# FDP members jubilant after clearing poll hurdle

By Michael Lindernann in Bonn and Judy Dempsey in Berlin

It was all over in a second. An empty blue television screen, then a pie chart. First the two big parties and then yells and cheering of the sort reserved for football terraces: the Free Democratic party had made it

back into parliament.

People threw themselves into each other's arms, managing only just to keep their drinks in their glasses.

The first exit poll showed the FDP had won 7 per cent, 4 per cent less than in 1990 but enough to get its representatives back into the Bundestag, the lower house of parliament. For the first time in years it was a close shave for the party, which has only once scored more than 12 per

In recent weeks polls had shown FDP support slipping steadily. One poll even gave the party 4 per cent, a result which would have left it outside the federal parliament for the

The party lost out in five state elections this year and also lost its seats in the European parliament. Many people who had previously voted FDP now wondered whether there was any point; the liberals had moved too

Young Liberals in the northern state of Schleswig-Holstein. "Pve met (Kin-

first time since the second world war. Gärtner, a 21-year-old who runs the exit polls came in. The PDS had suc-

ceeded where the other parties failed. It relied on a loyal and large grassroots organisation whose members

are known locally. It tapped the vote of former Communist party members, many of whom were dismissed from

In Thuringia, the PDS was

The PDS was helped by the governing Christian Democrats

# US defence chief on China visit

Mr William Perry, US defence secretary, got an enthusiastic welcome in Beijing yesterday at the start of a brief visit to discuss increased Sino-US defence co-operation. He is the first US defence chief to visit China since before the Tiananmen killings of June 1989, when China's military turned its guns on pro-democracy protesters in and around Beijing's central

Mr Perry was greeted by General Chi Haotian. China's defence minister, and other senior officers, including the deputy chief of the general staff of the People's Liberation Army and the commander in chief of the navy. The visit follows that of other senior US officials, including most recently Mr Ron Brown, commerce secretary, who headed an investment mis-

These exchanges indicate a desire on both sides to upgrade a sometimes fractious relationship. Among issues to be discussed are regional security, arms control, defence conversion and peacekeeping activities. US officials say there are no plans to lift sanctions on military sales to China imposed after June 1999. Trans Walker in Resisters 1989. Tony Walker in Beijing

## Chinese investment surges

Capital spending in China in July and August surged by more Capital spending in China in July and August surged by more than 54 per cent per cent compared with the same period last year, adding to continuing worries about pressures on prices and an overheating economy. The State Statistical Bureau reported that the "overall scale of investment was still inappropriate". Fixed-asset investment in the first eight months far exceeded the 25 per cent growth target for the year.

The bureau said that to August, investment by state enterprises, which account for the hulk of capital spending, jumped by 44 per cent or Yn492.2bn (£33bn). Coastal regions were reported to be the main culprits in exceeding the capital-

reported to be the main culprits in exceeding the capitalspending growth targets. The bureau's report accused the prosperous east coast provinces of wilfully ignoring government directives. Tony Walker in Beijing

## Toy stores disarm in US

Toy stores across the US will this week be removing toy guns from their shelves, after a decision by some of the biggest retailers to stop selling weapons that could be mistaken for the real thing. The move has been prompted not by concerns that the sale of toy guns encourages violence, hut because of safety fears. With many young people in the US these days carrying real guns, there is a danger that children carrying imitation firearms could be seen as a threat. In two incidents in New York over the past few weeks, youths hrandishing toy guns have been shot by police who thought the weapons were real. One of the hoys, a 13-year-old, died,

Toys "R" Us, the biggest US toy retailer, announced at the end of last week that it would stop selling all look-tlike toy guns including western style rifles and revolvers, plastic handguns and any weapons that could be modified to look real. It was joined by Kay-Bee Toy Stores, another big toy retailer. which said it would immediately start removing and destroying guns that resembled military or police-style weapons. Richard Tamkins, New York

## Italian unions call protest

Italy's three main trade union federations have called for a mass demonstration in Rome on November 19, following up Friday's general strike to protest against proposed pension and welfare cuts. The unions also called for a further eight hours of strikes between now and the middle of next month. But most government ministers remained firmly committed to the 1995 budget, which looks to find savings and new revenues of L50,000bn (£20bn) to reduce next year's deficit.

Mr Silvio Beriusconi, Italy's prime minister, missed the general strike because he was on an official visit to Russia, but at the weekend he dismissed further industrial action as futile. "The government has inherited an economic situation with figures that no demonstration can alter," he told journalists in Moscow before returning to Italy. Friday's four hour general strike paralysed Italian cities and angry but peaceful demonstrations attracted at least 3m people onto the streets. according to organisers. Andrew Hill, Milan

## EU satellite liberalisation

The European Commission has used special powers to force through a directive on liberalisation of satellite equipment and services throughout the EU. The directive liberalises both establishment and operation of satellite networks, as well as associated satellite dishes, across the EU. The commission said the move would help husinesses in retailing distribution and the financial sector along with similar potential users who have pan-European requrements but limited means of exercising them.

"Due to liberalisation, a 10-fold increase in the volume of satellite communications before the year 2000 can be expected," said the commission. The situation in Europe contrasts sharply with the US, where an "Open Skies" policy in the early 1980s led to rapid stimulation of the satellite market. Emma Tucker, Brussels

## UK-Argentine gas venture

British Gas and YPF. Argentina's privatised oil company, have been discussing the formation of a joint venture to explore for hydrocarbons in disputed South Atlantic waters. "We would both like to form a long-term partnership," said Mr John Bueno, general manager of British Gas Argentina. Such an alliance would in addition to other projects, seek to explore waters between Argentina and the Falkland Islands.

British Gas already has a big presence in Argentina with

British Gas already has a big presence in Argentina with British Gas already has a big presence in Argentina with important stakes in privatised gas distribution and power companies. But Mr Bueno stressed that talks between the companies could go no further until the British and Argentine governments had constructed the political framework within which exploration could proceed. Although Argentina was defeated in the 1982 war over the Falklands, it has not relinquished its claim over the islands, ownership of which was recently enshrined in the constitution. Buenos Aires disputes Britain's right unilaterally to exploit a non-renewable resource in internationally disputed waters. David Pilling, Buenos Aires

## Confusion in Chechnya

The situation in Russia's breakaway Chechnya region grew ever more confused yesterday, when both the government and opposition forces claimed to have gained the upper hand after fighting in the capital, Grozny. The Chechen leader, Mr Dzhokhar Dudayev, appeared on TV to announce an attack hy Moscow-backed opposition forces on Grozny overnight had been repulsed, itar Tass news agency said. But sources within the frail coalition of opposition groups said the assault on Grozny had been a reconnaissance mission which showed the city could be captured at any time. Reuter. Moscow

# Big brother's Haiti blueprint

s soon as Haiti's President, Father Jean-Bertrand Aristide, stepped a out of a US military helicopter on to the grounds of his national palace, Mr Warren Christopher, US secretary of state. was studying his every move.

The Americans have made a big investment, both political and financial, in bringing Fr Aristide back to power, and now they want their dividend: a stable

That is why, on leaving Halti late on Saturday, Mr Christopher stressed the US would continue its military presence until the country was "secure", and President Aristide would be firmly pushed to bring his enemies into the political process.

In the task of "institution building", Haid would receive important guidance from the state department's Agency for

As the US military's Haltl mission was ambiguous on arrival and largely shaped by events on the ground, the US blueprint for creating democratic institutions and cusuring development of a political centre that will hold is in a constant state of revision. "Developing policy in Haiti is like going around a blind curve at 100mph." says one USAID official.. You

simply don't know what's next." Nevertheless, the central issues, culled from previous US experience in El Salva-dor. Panama and South Africa, have largely been defined. The Aristlde government is being pressured to construct a wide political centre that shuns mob vlohave and paramilitary terror, wrest judicual tasks away from the army and police force, and build up other branches of government, notably the legislature and municipalities.

Crucial to completing these tasks is finding the right mix of reconciliation and justice But here. US policy officials are

divided. Some feel a Truth Commission which would name those responsible for the estimated 5,000 murders under the milltary government but not prosecute them would be enough to calm many of Presi-dent Aristide's followers.

By doing this, President Aristide could quickly change himself from a polarising force into a cohesive, healing figure, similar to the political transformation under-gone by his friend Nelson Mandela. But unlike the anonymous death squads in El Salvador, Halti's killers are well-known public figures and President Aristide, without being specific, seems to be leaning towards some form of prosecution.

## Ted Bardacke on US efforts to create a workable government

"Aristide understands the need for recon ciliation but not so far as to establish impunity," said a US official who believes if Haitlans are ever to believe in their justice system, they must be shown that it

can produce upright results. Still, President Aristide may find that forgiveness is politically more astute, given his need to cajole moderates into legitimate political participation.

"In Halti, you don't have a governing class, you have a ruling class," says Mr Rick Barton of the State Department's office of transition initiatives (OTI). He says that for the political system to be inclusive, a broad coalition willing to play by new and unfamiliar rules must be created, and to do this, people must feel as if they are not under attack. The centre-right is expected to be held in check by liberal economic reform and what US officials hope will be a new prime minister from outside the president's inner circle. The violent and extreme right has

to deal with the US military. If a centre can be found and security ensured, then OTI's job of demobilising those ousted from the military for human rights violations will be easier. OTI is the brainchild of USAID head Mr Brian Atwood, who believes the cycle of poverty and bumanitarian assistance cannot be broken until hasic issues of governance

OTI will pay the salaries of former military and police officers for six months and voluntarily relocate them to other parts of the country, where their reputations are less of a threat to their own security. OTI teams will ask local community leaders to nominate upstanding young people as new members of Haiti's police force, who will then be trained by another state depart-

ment agency.
Interim budgets for local judges, to be autonomous from the military and police force for the first time, is also part of USAID's financial assistance package. Bringing in mentor judges from the nearby French-speaking countries of Guadaloupe and Martinique is also being considered. Much of the Americans' political development plans and budget will go towards providing a check on President Aristide's power by attempting to

strengthen other areas of government.

Programmes for raising tax revenue on a local level will be implemented, while the legislature is to be prodded into expanding the constitutional authority of local governments. The goal is to restrain both a president on the left and rural strongmen on the right.

# Crowning glory for the last of his line

Russia's harassed president will meet Queen Elizabeth II today

hen Queen Elizabeth meets Mr Boris Yelt-sin, on her first state visit to Russia which starts today, she will be greeting a man who is certainly the last of his line. No future president of Russia will he a former member of the Polithuro of the Communist Party of the Soviet

Mr Yeltsin has fought hard to avoid the fate of being "the Queen of England", as the dec-orative presidency to which the former Supreme Soviet of Russia wished to confine him was popularly known in Russian political circles.

## John Lloyd looks at the royal visit

But in that struggle, which reached its climax a year ago, he exhausted himself, unable now to muster the consistent energy needed to huild institutions of democracy. That leaves him occupying one of the most powerful presidential chairs in the world without the appetite or will to use its power in a way which will fully meet the challenges which press on him.

From the Queen's point of view, the timing of the publica-tion of Prince Charles's authorised biography has cast an unfortunate shadow over the beginning of her visit. That is not the only potential embarrassment. The last Tsar of Russia, Nicholas II, and the Tsarina Alexandra, both close relatives of the Queen's grand-father George V, were killed on

Lenin's personal orders. Mr Yeltsin, in his Bolsbevik period, levelled the house in Ekaterinburg where the Tsar's family met their deaths, in order to remove its potential as a shrine and presumably to

advance his career.

The bodies were buried in roadside graves from which they were exhumed only after the end of the Union of Soviet Socialist Republics: they have not yet been reburied, though are due to be, in the Peter and Paul Fortress in Petersburg. which the Queen will visit. The last Russian royal fam-ily is thus unlikely to come up

has made at different times hefore different audiences denunciations of communism and has apologised directly to the Japanese for Soviet treatment of their prisoners of war, he has not alluded publicly to the circumstances of the Tsar's death. Russia is not and perhaps cannot be a penitent nation as Germany has been.

as a subject of conversation

Mr Charles Anson, the

Queen's press secretary, said yesterday the issue had been discussed at diplomatic lavel

hut "the question of the rebu-

rial of the Russian royal family

and the Queen's visit are

entirely separate issues". Though President Yeltsin

between the toasts.

The British royal house also has a historical black spot which may inhihit it from pressing the matter. King George V, a man who professed Nicholas II to be a close friend Nicholas II to he a close friend as well as a relative and so like him physically as to seem in photographs more a twin than a cousin, personally refused the Tsar's family visas.

Professor Dominic Lieven, in his biography of Nicholas, says "the King...took the lead in closing off the possibilities of asylum...fearful of reaction from British socialists and the iabour movement, King George did not want his dynasty to be associated in the public eye with the hated and now fallen Russian Tsar, let alone with his half-English wife,

Awkwardness of a different kind now attends Queen Eliza-beth II as she a British mon-arch, comes to Russia for the first time. Still, the visit of western Europe's most prominent constitutional monarch serves the purpose of high-lighting President Yeltsin's crowning achievement.

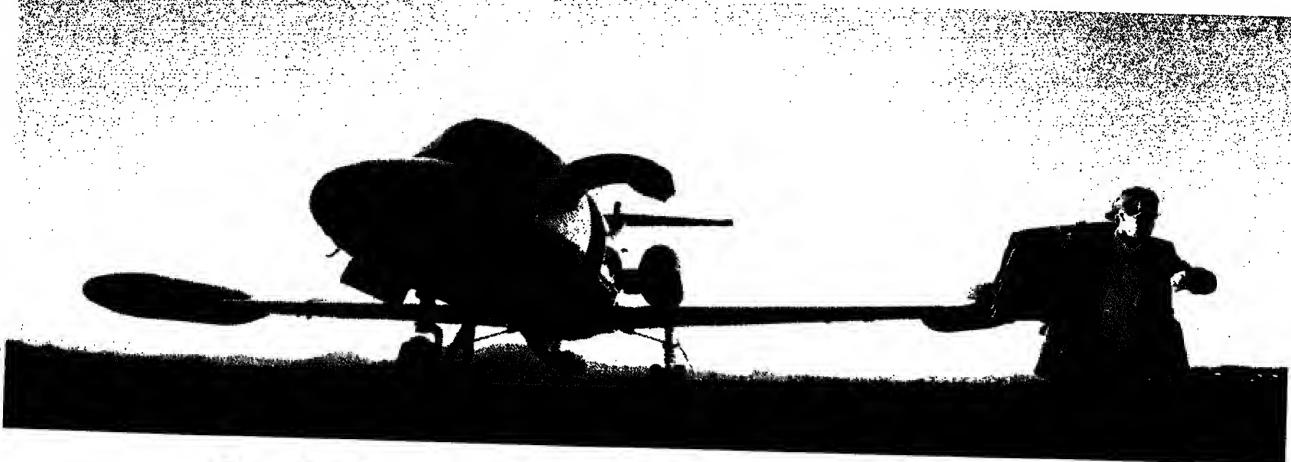

Like Mr Mikhail Gorbachev before him, he has realised, in what has been, for both men, the greatest test of their erratic but high courage, that it is not possible to take refuge for any length of time in the mailed

The process which Mr Yelt-sin inherited from Mr Gorbachev roars on; he rules over it a little more than the Queen rules over her kingdom, but not much.

# US warns Iraq on new build-ups

By George Grahem in Washington and Michael Littlejohns in New York

Armed with a new United Nations resolution warning of "serious consequences" if Iraq once again menaces Kuwait, the US yesterday threatened immediate military action for any repetition of this month's huge Iraqi troop

build-up near the Kuwaiti border.
Mr Warren Christopher, US secretary of state, said the UN resolution, passed unanimously by the Security Council late on Saturday night, put Iraq's President Saddam Hussein "on notice...that he must not again threaten Kuwait. If he does, we feel we have all the necessary authority to act against him. I think next time we'll probably not wait," Mr Christopher said yesterday.

The US does not expect to start withdrawing the tens of thousands of troops it has sent to Kuwait until several weeks after fraq has completed the reversal of its own troop build-up. US officials said they were still watching two brigades near Nasiriyah, although the Iraqi troops appeared to be moving in the right direction.

Washington is anxious not to have to perform the same costly troop deployment all over egain, weeks or months from now, if Iraq were to start moving troops back towards its border with Kuwait. The passage of Saturday's UN resolution followed a day of diplomatic wrangling in New York, as Russia and France quarrelled with the tough language proposed by the US and UK. Russia demanded the inclusion of lan-

guage welcoming "all diplomatic and other efforts to resolve the crisis," a reference to the mission of Mr Andrel Kozyrev, Russia's foreign minister, to

Mr Rozyrev is due to meet Mr Christopher in New York today, Mr Tariq Aziz, Iraq's deputy prime minister, was reported to be on his way to New York for talks with Security Council mem-bers. The next review of sanctions will be on November 14, which apparently is why Mr Aziz has decided to conduct yet another lobbying campaign, this time with help from Mr Kozyrev.

In a communiqué issued by Iraq and Russia after Mr Kozyrev's visit to Baghdad last week. Moscow promised to support an easing of the economic sanctions imposed by the UN, while Iraq

and sovereignty. But the US remains adamant that Saddam should not be rewarded for stepping back from the threat ha mounted 10 days ago. It continues to demand Iraq comply with the full list of UN resolutions against it.

"Our goal is to have him comply with all UN resolutions, all of them, including respect for ethnic minorities, including the return of Kuwaiti prisoners," Mr Christopher added. Arab diplomats say Mr Saddam is convinced the US will never allow the lifting of sanctions so long as he bolds power. although he has never come closa enough to compliance for this theory to be tested. Any possibility of relaxing sanctions depends on Baghdad's recognition of Kuwaiti independence.

Julian Ozanne writes on the PLO leader's choices r Yaesir Arafat's imposed on Gaza after the kidincreased security across the crackdown on the extremist Islamic

Hamas group has saved the Middle East peace process but has polarised Palestinian politics and raised the prospect of internal Palestinian conflict. Last week's kidnapping and death of an Israeli soldier during a raid by Israeli forces on the kidnappers' hideout, starkly revealed the difficult political choices facing the Palestinian leader, Mr Arafat must keep the peace process going by conceding Israeli and western demands for a decisive blow against Hamas, at least its military wing. However, this would risk conflict or the

in the tortuous peace negotia-tions which each day erode his popular support. Israeli cabinet ministers yesterday praised Mr Arafat's arrests of up to 300 Hamas activists in Gaza and decision to disarm the militant organisation which opposes peace

possibility of continuing delays

The Israeli government, embarrassed by the fact that the kidnapped soldier was being held in the Israeli-occupied West Bank and not, as they had insisted, in Palestinian-controlled Gaza, said they would today lift the closure napping. The cabinet also said it would resume suspended peace talks in Cairo tomorrow with the Palestine Liberation

Crackdown on Hamas

Organisation. Mr Shimon Peres, Israeli foreign minister, said over the weekend that Israel was satisfied with Mr Arafat's "readiness to counteract the dangers of Hamas". However, Mr Ara-

Israeli Prime Minister Yitzhak Rabin and Foreign Minister Shimon Peres yesterday flew to Jordan to meet King Husseln, a foreign ministry spokesman said, Reuter reports. He said the three would try to Iron out issues blocking a peace treaty. Israel and Jordan agreed in July to end 46 years of war.

fat's moves against the underground movement has divided Palestinian society. Hundreds of Hamas supporters, angry at the continuing crackdown, rioted near a Jewish settlement in Gaza yesterday and threw stones at Israeli police. On Saturday, up to 1,500 Hamas supporters demonstrated outside the Gaza central prison demanding the release of their activists. Pales-

tinian police, anticipating fur-

ther protests, yesterday

Strip. Weekend statements by Qassam, the military wing of Hamas, threatened Israel with more kidnappings and Mr Ara-fat with bloodshed if he continued his crackdown. Hamas officials accused Mr

Arafat of being the "poodle" of Israel, of carrying out "Zionist" policy by proxy, and of passing information to Israel about the location of the kidnappers. Hamas also blamed Mr Arafat for the death of three of its gummen in the raid on Friday. "If these arrests continue, Qassam hrigades will reply by setting the Gaza Strip ablaze on the heads of the Zionists and their lackeys." one statement

Despite Hamas threats of violence, both groups know they have more to lose than gain from confrontation. Mr Arafat's aides have repeatedly warned that the benefits of the peace process are still too few and limited to ensure success of the pro-peace forces.

Furthermore, Hamas is believed to have at least 15-20 per cent bedrock support in Gaza as well as a motivated and disciplined underground military wing. Hamas has built up an

impressive social welfare network across the Gaza Strip and

Orthodox Jews hang an obituary sign for kidnapped soldier Nachshon Waxman yesterday

West Bank, of schools, health clinics, the Islamic University in Gaza and benevolent societies that continue to spread the doctrine of Islamic values and build the organisation.

Hamas will be cautious to risk a conflict which could see its institutions destroyed and leave it hlamed by Palestinians for civil war. "Hamas and the PLO have to live together in Gaza," said Mr Roni Shaked, a Hamas expert at the Yediot Ahronot newspaper. "Both of them know if they cross the red lines they are going to destroy what they have achieved, because civil war inside Gaza Strip means the and of everything, and probably the return of Israeli occu-

But Mr Arafat must meet

and strike a blow at Hamas to keep the peace process going. He is clearly hoping to sepa-rate the political wing of Hamas from the military wing, and has indicated he will not release detainees associated with the Qassam brigades.

If his strategy pays off, and Hamas, concerned about the potential threat to its institutions and convinced that eventually the tide of Islam will be triumphant, allows him to curb Qassam, then the threat of widescale violence could be avoided. In the long term, Mr Arafat knows the battle against Hamas must be fought economically and culturally, alleviating the poverty and sense of alienation which breed

INTERNATIONAL PRESS REVIEW

# Tabloids find room to praise heroism

By Mark Nicholson

Tabloid journalism is increasingly a necessity in Iraq. Two of the country's leading dailies, al-Jumhuriya and al-Qaddissiya, have both in the past few months shrunk from broadsheet to tabloid formet for want of newsprint in sanc-tions-hit Baghdad. Gone are the sports pages and much of the local news - there is not a

lot of advertising either. But each of Iraq's main dailias yesterday, as all days, found plenty of room to bash away at their favourite topics: the heroic wisdom of President Saddam Hussein and the perfidious treachery of the west and above all, of course, the US

With extraordinary syn-chronisation, all the main dai-lies' photo editors chose for the front pages a low-action shot of Mr Saddam sitting at the head of a meeting of the Revolution-ary Command Council, Iraq's

highest ruling body. "Arab and world resentment at heinous American campaign against Iraq," blazed al-Jumhuriya. "Russians threaten to use veto at Security Council." So, "Has a world coup taken "Washington prolongs the place? Is the Iraqi victory near-

embargo to justify petroleum and financial interests in the region," roared al-Qaddissiya. "President presides over meet-ing of RCC," said Babel, Iraq's newest tabloid, edited by Mr Saddam's son, Uday, less blaz-

Inside Iraq's dailies, the tone is as consistent as the photographs - one of indignant selfrighteousness laced with mockery. "Any military officer or analyst with a reasonable degree of insight," intoned al-Thawra, the ruling Baath Party newspaper, "would be astonished et the biased American claim that two divisions (of Iraql troops) could attack Kuwait and occupy it, since it is logistically impossible."

In unison, all the papers hail Russia and Mr Andrei Kozyrev, the Russian foreign minister, who takes to the UN this week proposals that Iraq recognise Kuwait in exchange for soma movement on the embargo although iraq's papers fail anywhere to specify directly that Mr Saddam might recognise Knwait. Al-Jumhuriya speaks only, and typically, of "protecting the sovereignties and territories of the region'e countries.

whether Iraq or Kuwait".

ing," asked the editor of al-Jumhuriya. Of course, yes: With the failure of the American 'TV game' in Iraq, the TV success which Clinton wanted to bolster his very weak internal position has also fallen." Mr Clinton, the successor of "Bush the famous criminal". and his regime are reported variously as "sick", "unstable" and even "conniving with little

pygmies". Sanction-weary Iraqis will remain sceptical. For most, it is the email stories tucked away inside the papers which

actually mean things.
Such ea the story telling motorists who have lost their oil ration coupous that they can now re-register. Or, on the back page of Babel, which has made Itself Iraq's campaigning paper, the list of the day's donors to the newspaper's fund for the poor. Yesterday this included Ahmed Rathi and Laith Hussein, two Iraqi soccer stars playing in Qatar, who each donated ID40,000.

Or, the despatch from Basra telling how prices of basic com-modities fell during the past few days as tensions lessened. A 50kg bag of sugar fell to ID18,000 from ID25,000, while 50kg of flour fell from ID8,000

# Ceasefire in verbal war

KUWAIT

By Robin Allen For the past 10 days, e

ceasefire has broken out in the traditional rivalry between Kuwait's three main Arabic dailies. The reason: for the second time in four years, Iraq saemed to be threatening Kuwait's very existence.

The satirical wit of Kuwait's celebrated cartoonists was almed at Saddam Hussein rather than members of the government or rival factions of the opposition; and the subtle barbs of laborious editorials, composed by editors-in-chief

ers, were kept for those who seemed to be slow in showing support for Kuwait. All the dailies have run extra

pages devoted to the crisis; the English-language daily Arab Times broke all tradition by publishing on the Friday weekend; while the owner of Al Qabas, which many regard as the leading daily in both circulation and quality, outdid him-self in devotion to the cause, by voluntarily giving up the Crime Watch column. This is an episodic discussion among Kuwaitis about the rising crime rate; hardly a suitable

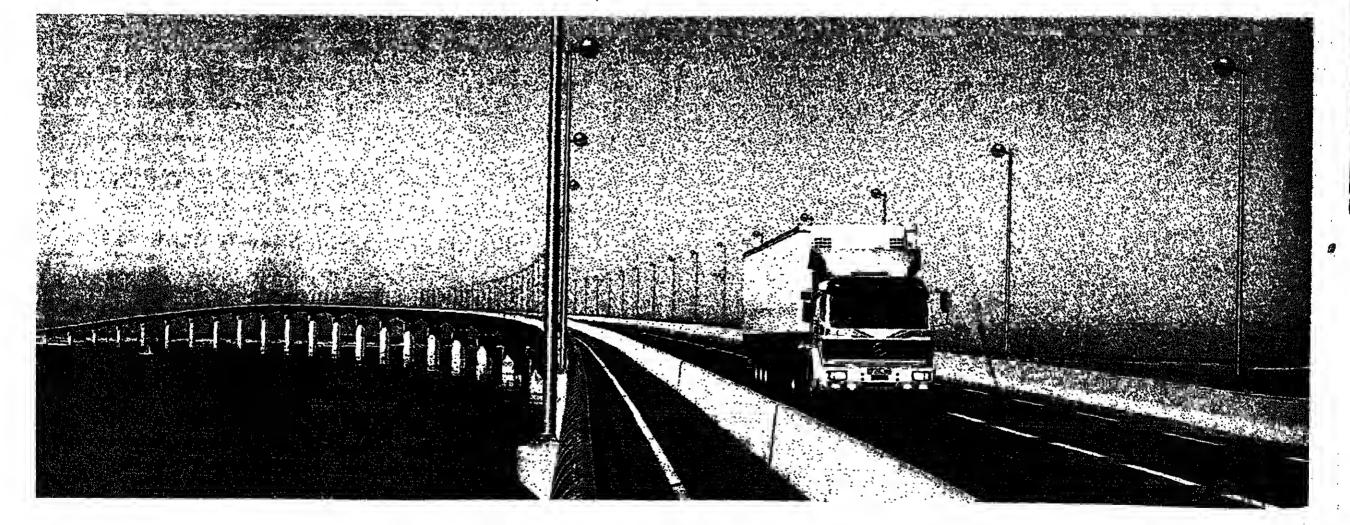

talking point when attention

needed to be focused on the chief enemy in Baghdad.

However, Arabic newspaper editorials and opinion columns kept their place on page one; a reminder that in Kuwait, as in many other Arab countries, those in authority imagine their views on current affairs to be more important for the reader than straight news.

Extraordinarily, in a country of just over 1m Arabic-speakers. Kuwait has five daily Arabic papers, plus two Arabic weeklies and two English-language dailies for the small minority of non-Arabic-speaking expatriates who would want to read an English paper.

# You don't have to buy a Mercedes to get the best truck on the road.

What's this? is Mercedes-Benz, the world's largest manufacturer of commercial vehicles, giving best to another manufacturer?

Sorry to get our rivals' hopes up. But no. A Mercedes still delivers economy, reliability, technology, whole life costs and re-sale values that set it apart from other vehicles.

All we're pointing out is that if it's a

Mercedee you're after, you don't have to buy ona. You can choose from any one of dozens of operating or acquisition methods, all with the advantage that they're backed by Mercedes-Benz

For the ultimate in convenience, a Mercedes-Benz CherterWay contract covers every aspect of e truck's operation. All you have to supply ie the fuel,

and the driver. Alternatively, e Mercedes-Benz Maintenance and Repair Contract could be the solution if you want to own the vehicle but need a fixed servicing cost to budget for. And when you see how low those costs are, you'll realise that uncompromising build quality really does pay off in the long run.

And if you want to keep your options

open? With a Mercedes-Benz Finance/ Mileage agreement, you pay a fixed deposit and monthly repayment, and decide at the end of the term whether to buy outright or start anew. Whichever method you choose, you'll find that a Mercedes-Benz is a very cost-effective way to run a business. All Mercedes-Benz service and finance

packages are available across the

Mercedes-Benz Trucks and Vans

range, from the 208D panel van right up to the 2550 6x2 tractor. And as you'd expect from the world's number one, there are literally hundreds of options and specifications open to you. To help you select the ideal vehicle for your needs, there's no better place to go than your nearest Mercedes-Benz dealer. It may be hard to persuade you not to buy it. But we'll try.

RELIEW

# 

Chinese Communist party cadres learned at the weekend that life in the fast lane would lose some of its allure as new regulations outlawed official use of imported luxury cars such as Mercedes and Cadillacs.

According to a directive from the party's central committee, high-rank-ing officials, including ministers and provincial governors, must ride in cars made in China. The regulations stipu-late that imported vehicles be replaced by locally made models.

If the regulations are enforced, Chi-nese officials will be deprived of one of their more cherished privileges. Like gold wrist-watches and expensive fountain pens, an imported luxury limou-

challenged in

advancement for status-conscious rep-

resentatives of the proletariat. No mention was made of any effect on top leadership figures, such as politburo members, who travel in fleets of black Mercedes.

Apart from Mercedes, Cadillacs, and Lincoln Continentals, other favoured foreign brands include BMW and Lexus. None of these marques is assembled in China.

The central committee directive seems certain to hasten the scramble among foreign automotive companies for the right to manufacture a luxmy car in China.

Prontrumers in negotiations now under way are thought to include Gen-

sine had become a coveted symbol of of the Buick, Ford with its Lincoln, and Toyota.

In the short-term, the new rules will benefit Volkswagen's Andi and Santana models under manufacture in China. The Audi is widely used by mid-dle-ranking officials, but has not been regarded as entirely suitable for minis-

China has been without a locally made luxury car since production stopped in the 1980s of the Red Flag usine, whose generous dimension were such that a meeting of the Polit-buro could be conducted in its capa-cious rear compartment. Chinese officials these days would not be seen dead in a Red Flag, which they regard as a bad advertisement for the modernising

Among those who might welcome the weekend edict are owners of luxnry cars in Hong Kong.

In the past few years there has been lively trade in stolen vehicles across the border into Guangdong province, where many have ended up in official hands, including those of the security

The security organs throughout China appear to be particularly well equipped with luxury vehicles. In Bei-jing, black Mercedes with dark-tinted windows are a favourite conveyance of high-ranking officials of the public security bureau.

The new regulations follow last month's meeting of the central commit-tee which resolved to clean up the

# Suharto to be Indonesia's forest fires fan fury in Malaysia

court on decree By Manuela Saragosa in Jakarta

Indonesia's political and economic stability belie the status and authority of the judiciary. It is a generally held view that President Suharto and senior cabinet ministers stand above the law and challenging authority at this level is largely taboo.

The next few weeks, however, will see two cases which challenge the government's authority at its highest level. Hearings on the first case start today and involve Indonesian environmentalists suing President Suharto for issuing a decree which allegedly allowed state money from a reforestation project fund to be diverted to non-environmental causes. While the president has said he will face the challenge, officials have also made clear that be

will not testify. In the second case, a prominent journalist. Mr Gunawan Mohamad, and former employees of the banned weekly magazine Tempo have filed a suit against Mr Harmoko, minister of information, challenging him for benning the magazine in June this year. Court hearings are expected to start a national aircraft industry.

within the next two weeks. Environmentalists and journalists admit their chances of winning are slim but they remain undeterred. "Winning or losing is not the target here," said Ms Emmy Hafild, project co-ordinator at Walhi the Indonesian Forum for the Environment, which is among the seven pressure groups bringing the case against President Suharto. "This suit is just

Barlier this month, a Jakarta court established at prelimi-nary hearings that the pressure groups and journalists have valid cases. Among other things, environmentalists are accusing President Suharto of violating the principles of good governance". They have criticised him for not seeking parliamentary approval before allegedly diverting the money from the reforestation fund.

No fewer than seven environmental and legal pressure groups have joined forces to file the suit against the 73-yearold president. They are contesting a presidential decree, issued on June 2, which, they say, allowed about \$200m (£133m) from a reforestation fund to be used for developing

and Singapore noticed something strange happening to the weather. On most days a thick haze, caused mainly by forest fires in neighbouring Indonesia, blanketed much of the Malay Peninsula. The authorities warned of the

dangers to health. There were

also air traffic control prob-

Indonesia has now admitted the extent of the damage, describing the fires as one of the worst ecological disasters in the country's history. Based on the latest reports, the current fires have covered up to 5.1m hectares," said Mr Diamaluddin Survohadikusumo, Indonesian forestry minister. In recent days, rains have doused many of the fires, but underground peat deposits continue to burn over an area

larger than the Netherlands. Within Indonesia, arguments over the cause of the fires continue, while Malaysia and Singapore worry about the effects of the haze. There have been worries about health; there are concerns that recent events could do serious damage to the multi-billion-dollar tourist industries of both countries, and in Malaysia there have been warnings of a dip in agricultural production.

The fires are believed to have initially broken out in ness to intervene and settle

early August, during a pro-longed drought. At first, the Jakarta euthorities did not seem over-concerned: the smoke did not affect the main Indonesian island of Java but

hlew north-west towards Singa-pore and Malaysia. Mr Djamaluddin is adamant that about 90 per cent of the fires were started by local communities who practise a slashand-burn form of farming to clear land for agricultural uses.

Kieran Cooke and Manuela Saragosa on an ecological disaster

But environmental groups in Indonesia blame the fires on plantation companies who took adventage of a prolonged dry season to burn land and plant palm oil. They also point the finger at logging companies who, they say, are recklessly degrading forests and leaving large amounts of combustible débris behind.

Critics say the Indonesian government not only lacks the necessary equipment to try to control such fires; they con-tend it has shown little willing

land disputes between settlers and logging companies, thought to be one of the other causes of the fires.

A fire on Kalimantan in 1982 destroyed a similar area of rain forest. "This present fire ranks as the worst." said Ms Emmy Hafild of the Indonesian forum for the environment, a leading non-governmental organisation. "This will happen every time we have a long drought, because most of our forests have been degraded."

Environmentalists are concerned ebout the increasing frequency of large forest fires in Indonesia. Apart from the big fire in 1982, serious blazes also occurred in 1987 and 1981. Neither Malaysia or Singapore have publicly criticised Indonesia over the fires. Malaysia has its own pollution problems. the result of eight years of more than 8 per cent economic growth, and is reluctant to lay all the blame on Indonesia. But there is also a wider issue.

Indonesia is seen much as the "hig brother" of the Association of South-East Astan nations (Asean). Asean prides itself on solving its problems through consensus. This can mean potentially tough issues are often ignored. So far, the only outside help accepted by Jakarta has been an offer from Singapore to give more weather information.

# may link in Europe with Rover

By Kevin Done, Motor

Mr Alex Trotman, chairman and chief executive of Ford, the US vehicle maker, said the group would decide "within the next month" whether to produce cars in Europe for sale under the Mazda badge.

Such a project has previously been rejected but it has been revived this year follow-ing moves by Ford to establish a stronger influence over

"We are studying again whether it is in our interests to give Mazda a Ford-besed vehicle in Europe," said Mr Trotman. It would be "a small passenger car and lead to higher levels of capacity utilis-etion at Ford plants in Europe. Mazda, which is 24.5 per cent owned by Ford, is the only one

of the leading Japanese car-makers without a car production base in Europe. Its sales in west Europe have fallen by 10 per cent in the first 9 months this year compared with a growth of 5 per cent in the

overall market. It is expected that a Mazda-badged Ford would be based on either the Ford Fiesta or Ford Eccort and built at one of Ford's European assembly plants in Germany, the UK or Spain. Under a long established arrangement some Mazda vehicles are sold under Ford badges in Asia. In Japan the Mazda 625 and the Mazda 323/Familia are sold respectively as the Ford Telstar and the Ford Laser.

Mr Trotman said that Mazda was unlikely to be used again. to engineer a mainstream car to be produced and sold by Ford in North America or Europe, as was the case with the North American Ford Escort developed by Mazda.

"If we can design at the lowest cost and we have the human resources we will do

it," he said. It was "very likely" that the next genera tion Recort for the European and North American markets would be developed by Ford in Europe, he said.

By Kevin Done

Rover, the UK subsidiary of BMW of Germany, has signed an agreement with Kie, the second largest South Korean carmaker, to jointly develop e built in the UK and Korea. Rover said that the joint engine development programme, the first it has under-

taken with a rival carmaker. would involve an investment of around £30m (\$47.4m). It is understood that the agreement with Kia is for the development of a range of V6

engines that will be developed from Rover's existing K-Series small car engines.
The 2.5 litre Rover V6 is expected to be fitted first in the

UK carmaker's flagship Rover 800 executive car late next year replacing the Honda V6 engine currently imported from Japan, It will be produced at Rover'e Longbridge, Birmingham plant.

The Kia version of the V6 engine will be produced in Korea for use in a new range of Kia executive cars under devel-

Rover is in the midst of an ambitious programme to develop the highly successful K-Series engine in order to give it far greater independence from Honda, its Japanese partner, in engine production. The K-Series, which was

launched in 1.1 and 1.4 litre versions in 1989 after a £200m investment programme, is also being developed in larger 1.6 and L8 litre versions for use respectively in the new Rover 400 family car and MG sports car ranges to be launched next

Separately Rover expects to begin its first car assembly in East Europe in spring next year with the start-up in Bulgaria of joint venture production of its Maestro small family car range. In Bulgaria, where Rover has

formed a joint venture with the Sofia-based Daru group, the UK carmaker expects to begin sembly of the ageing Maestro at a plant at Varna on the Black Sea coast in the spring

in engines deal

next year.

Output is expected to total 3,000 in 1995 and could rise in later years to 10,000 annually including exports to other east European markets.

Assembly in Bulgaria will be on the basis of SKD (semi-

knocked down) kits supplied from Rover's Cowley, Oxford plant. Painted bodies will be shipped from Cowley to Varna for local final assembly, but Rover is siming to increase gradually the purchase of com-

ponents in Bulgaria.

Production of the Maestro -launched in 1983 - for the UK market is expected to cease by the end of the year. Rover investment in the project is expected to total £2m-£3m.

Rover has taken a 51 per cent stake and management control in the joint venture. Daru, which will hold 49 per cent and is already the local BMW distributor, has also been appointed the distributor for Rover and Land Rover vehicles

in Bulgaria. The two groups have put out to local tender contracts for the conversion and refurbishment of a factory in Varna, which will be used for the Mae stro assembly.

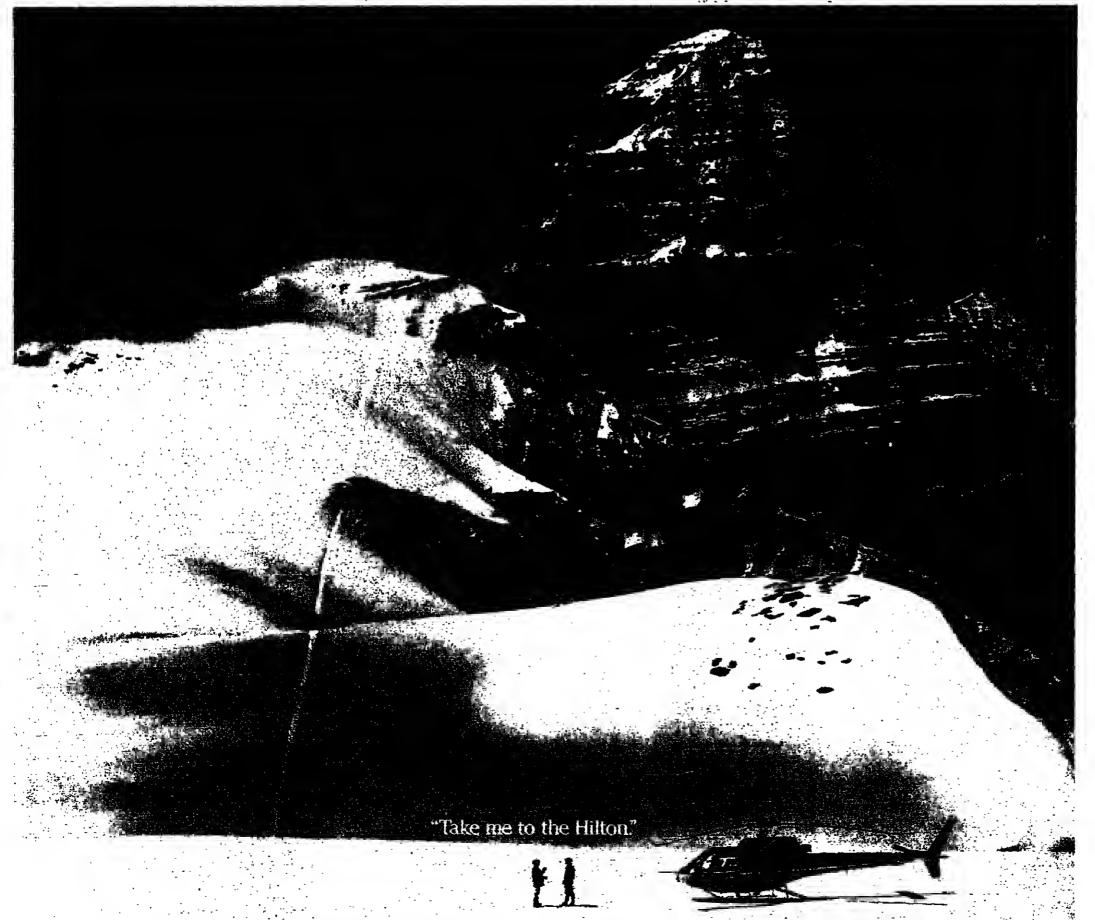

. The Rover group has taken several moves to internationalise it operations this year. These include:

 An agreement earlier this month to invest £10m in a new assembly facility and sales and marketing organisation for Land Rover Discovery and Defender models in South Africa with assembly taking place at an existing BMW plant at Rosslyn, near Pretoria.

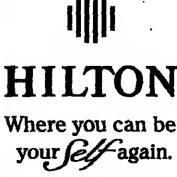

• The production under licence in Brazil by lochpe-Maxion of the Land Rover 300Tdi diesel engine.

Rover is also seeking to develop further a memorandum of understanding it has signed with the Sipani group in India for the local assembly of the Montego large family car and Rover's two-litre turbo-die-

It hadn't been the easiest of

assignments. But now I had the data and samples I wanted, and the weather was worsening. It was time to make a move. "Take me to the Hilton." Wherever my job took me, the Hilton was always my first choice: no-one looked after me better. The prospect of a warm welcome and a hot bath was distinctly inviting. Now, the only ice I wanted to see would be in a tall glass. I could feel myself relaxing already.

# Nissan UK chairman is paid £1.94m

Motor Industry Correspondent

Mr Octav Botnar, the chairman of Nissan UK, for whom an arrest warrant has been outstanding for more than 21/2 years, was paid £1.94m (\$3.06m) last year in his role as chairman of Nissao UK Holdings (NUKH) and its subsidiary Nissan UK (NUK).

His emoluments, excluding any pension contributions. increased by 514 per cent from \$316,000 in the previous year according to the latest annual reports filed by NUKH and NUK for the year ended July of £15.55m in the year to the

1993. Mr Botnar is also chairman of Automotive Financial Group Holdings, which owos AFG, one of the biggest UK motor dealer groups and a sister company of Nissan UK Holdings.

According to annual reports now filed for both holding companies, Mr Botnar increased his total pay from the two groups to £5.75m in the year to the end of July 1993, a 1,189 per cent increase from \$146,000 in the previous year. NUKH, which had a turnover

end of July 1993, made a pre-tax loss of £11.34m and paid its directors £5.6m to total

The company, whose ultimate parent undertaking, according to the annual report, is the Panama-incorporated European Motor Vehicles Corporation, now has only two directors, Mr Botnar and Mr Manfred Weder, a Swiss national and company director, according to NUKH filings at Companies House.

Payments were made to a total of seven directors during Britain's largest-ever tax fraud,

the seven are no longer directors. The annual report says that £1.028m was paid in "compensation for loss of office to former directors" as part of the £5.6m in total emoluments.

The second-highest-paid director after Mr Botnar received hetween £1.86m and The report says that Mr

Michael Hunt resigned as a director on June 28 1993. Mr Hunt was sentenced on June 30 last year to eight years in prison for his part in

the financial year, but five of in which he was convicted for conspiring to defraud the Inland Revenue of £55m in corporation tax. Mr Hunt's appeal against

## **Plenary** meetings nearer on N Ireland

By James Blitz in London and John Murray Brown in Belfast

Mr James Molyneaux, leader of the Ulster Unionist party, has opened the way to peace talks between the nalionalist Sinn Fein party and the British goverament by endorsing the prospecl of negotiations between both sides.

Amid clear indications that the Brilish government will drop its insistence that an IRA ceasefire should be declared "permanenl," Mr Molyneaux said yesterday that negotia-tions between London and the Irish nationalists would be a very, very important develop-

Speaking for the first time since the declaration of last week's reciprocal ceasefire by loyalist organisations, Mr Molyneaux said he did not see the word "permanent" as an essential obstacle.

His comments come amid strong expectations that Mr John Major will announce his government's readiness to initiate talks on the constitutional future of Northern Ireland in the next two weeks.

Mr Molyneaux made clear yesterday that he did not anticipate the UUP holding talks with Mr Gerry Adams, the

Asked whether he would shake Mr Adams' hand, he replied; "I don't quite see that happening for a long time because I don't see that we're going to be in the same com-

Speaking to bis party's annual conference in Carrickfergus, Northern Ireland, on Saturday, Mr Molyneaux restated its misgivings about the peace process. He reiterated its opposition to the idea of cross-border inslitutions, which is expected to be one of the main innovations in the framework document which the governments of the UK and Republic of Ireland are due to agree in the next few weeks. Reprasentatives from Sinn Féin, together with the nationalist SDLP and parties in the

Republic of Ireland, are due to hold meetings soon with Mr Albert Reynolds, prime minister of the republic, in a move to prepare for an early convening of Duhlin's Forum for Peace and Reconciliation.

"Things are changing and a lot faster than people thought," Mr Reynolds said

# Feudal claim alarms island

By Bill Brown in Jersey

private Jersey-based development company is using a feudal title to lay claim to the industrial foreshore of St Helier, the island's capital, estimated to be worth at least

Les Pas Holdings claims it owns the most developed section of the foresbore, including most of the island's busy barbour, the main power station, the fuel farm, a new underpass and most of a big area of reclaimed land.

The claim is being vigorously contested by crown officers in Jersey, largest of the Channel Islands. The figure at the centre of the bizarre wran-

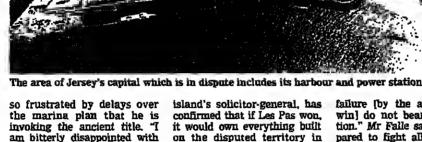

gle is Advocate Richard Falle, one of the island's leading lawvers and a director of Les Pas. Eight years ago be and a ted plans for a commercial marina which they said would belp alleviate the island's bousing problem and boost tourism. The plan has been

# Behaviour of consumers a challenge for analysts

Easy profits are out and the survey of distributive traders. canny consumer is king. That is the main message from the retail sector as it prepares to enter the crucial Christmas

trading season. But the question that will be raised this week, as a new set of retail data is published, is how far this cautious consumer mentality is affecting sales - and the instruments that are used to measure retail

behaviour. Consumers are adjusting to a new low-inflation environment, and the nature of the retail sector is itself changing. Making sense of the various sets of consumer data on offer is therefore hecoming increasingly complex. For example, the official retail sales data, to be published on Thursday, suggest that retail sales grew steadily this year on the back of the recovery amid heavy price competition, but fell back

in August Some analysts suspect this dip was due to the summer hollday. But others argue it points to a broader slowdown, not least because the Confederation of British Industry's own

published tomorrow, has recently been adopting a more sober tone.

The government's consumer spending data, published every three months, are even mora downbeat. They suggest that sales of non-durable goods started to drop as early as the But this appears to be at

odds with the Bank of England's data on the level of notes and coins in circulation. previously a good guide to consumer spending. These have been showing strong growth this year. Meanwhile consumer credit data, published last week, put borrowing at a record high. For some economists this

implies there might be defects in the official statistics, not least hecause many retailers say their experiences differ from the findings in the official

Mr Harry Moore, chief executive of Co-operative Retail Services, which has a variety of retail outlets including supermarkets and department stores, had little confidence in

the figures. "I often ask myself, where the devil do they get these figures from," he said. The main problem that may

he confronting economists is that tracking consumer behav-iour is particularly difficult because of broader changes occurring in this recovery. On the one hand, the nature of the retail sector is changing as large ratailers gain market share at the expense of smaller ones and mora retailars become multi-sector outlets. Meanwhile, as last week's inflation data showed, underlying inflation is at a record low, affecting retailers' perceptions

and consumer behaviour. The Central Statistical Office collects retail sales figures from about 5,000 retailers, and Mr Philip Gooding, CSO statistician, insists that the survey is representative. But Mr Richard Brown, deputy directorgeneral of the British Cham-bers of Commerce, said: "The official data does seem to hide the situation of smaller retail-

Search for electrical harmony nears end after 18 years

# Draft plug standards issued

By Andrew Baxter

Proposals for Europe-wida standards on electrical plugs and sockets have been devised hy a technical committee of Cenelec, the Brussels-based electrical standards hody for Europe and published hy the British Standards Institution.

Their appearance in the UK has moved controversy about the future of the UK's system of 13-amp plugs with three square pins into its final stages. The standards are for a system using a plug with two round pins and an adapter to facilitate changing to the Europe-wide system.

The standards are the culmination of years of lohhying among the 18 member countries of Cenelec, which run about 20 conflicting plng and socket systems. The Cenelec members will vote by March on the new system. If approved, conflicting standards such as the UK's BS1363, on which the 13-amp rectangular-pin plug is based, would have to be dropped unless opposing countries sought an exemption

or derogation. A technical committee of the British Standards Institution will cast the UK's vote, and tha institution said it was establishing a deadline of December 31 for public comments, in order to give the committee a clear two months in which to

assess opinion. Mr lan Campbell, head of the standards institution's electri-

cal standards development department, said: "We want to make absolutely sure that we have reached a consensus in this country before entering the wider arena."

Some British safety experts have argued that the proposed plugs could be inserted dangerously into existing UK sockets and that the unfused European plugs would not be safe with British ring networks. European electrical supplies work on a radial network

But supporters of the proposal reject these arguments. and say a standardised European system would benefit consumers and appliance manufacturars because of reduced costs and product compatibil-

Christopher Lorenz examines why so few companies are doing integrated product development

in southern England, is an unlikely birthplace for an innovation which may revolutionise the world computer graphics industry. But Criterion Software, a 17-person company which was founded there last year. bas launched a product which enables standard personal computers to produce three-dimensional graphics of a quality and speed hitherto feasible only on specialised and very expensive workstations.

waste of the visit

**20**00年による第一元章

The reaction of the US software and multimedia industry, and of and multimedia industry, and of computer games programmers worldwide, has been one of disbelief followed by great excitement. The product, called RenderWare, is being bought by a string of leading software development bouses and hardware makers. Unless Criterion's growth is crippled by the estab-lished leaders of the graphics indus-try as they rusb to clone its approach, the company's sales should climb rapidly from this

year's £1.5m. The Guildford company is also remarkable for a quite different reason. It is the second, fully-fledged new business to be spawned in just three years by the European research and development centre which Canon, the Japanese copier and camera maker, opened on Surrey University's research park there

in 1988. The first spin-off was Canon Audio, whose innovative, hemletshaped hi-fi loudspeakers are impressing the specialist music trade. Sales are expected to grow from £3m this year to £5m in 1995. Exports to the US bave already started, with Japan next on the list.

Most other Japanese R&D establishments in Europe, with the notahle exceptions of Sony's and Nissan's, are more limited than Canon's. They are of two very different kinds. One "upstream" group, also located in or near universities, monitors or actually conducts local research, mainly for transfer to Japan. The other, housed in or alongside Japanese factories in Europe, operates very much "downstream", merely adapting product designs from Japan for local manufacture and sale.

In theory, both kinds of operation are likely to expand gradually into the same central, or "midstream", territory as Canon: the design, development and engineering of products for global markets. This closely linked set of activities creates more added value than either research or manufacture do on their own. Yet it receives far less media sttention: the headlines are hogged by investments such as NEC's

called Robomom, to help

families control the amount of time

their children watch TV. Robomom

is a tamper-proof "electronic telesit-ter" that automatically turns your

set off after a certain time - a "form

of electronic agreement between

illusioned, whereas some, like me,

What a useful gadget. And what a

then elsewhere.

Many academics and government officials think the trend towards the midstream will occur automatically, as a series of pressures forces Japanese companies to do more design. development and engineering abroad. Apart from politics, pres-sures include the rising yen, the cost and supply of local engineers, the need to generate product designs direct from European markets, and a supposedly "natural" cycle of organisational evolution among multinationals of any origin.

Declarations of intent to join this trend have been made by Sharp and a few other Japanese companies which at present do only research or production in Europe. But the process is far less antomatic than many people think. Organisational and other factors are hampering such an expansion of design, development and engineering away from the companies' home base.

One long-standing barrier is the near-universal tendency to keep really key R&D programmes close to head office, Masahisa Fujita, a professor at the University of Pennsylvania, says this applies especially in fast-moving technologies such as electronics - the very sec-tor which accounts for most Japanese manufacturing companies in

Extra brakes on more Japanese heading for Europe include three options which did not exist for the Americans: first, locating in southeast Asia, or indeed the US; Japanese spending on R.D&D is already far greater in the US than in Europe, and growing faster. Second, doing more foreign design and development through alliances, rather than in-house. Third, subcontracting more work to the growing plethora of development consultancles in Europe and the US.

The last two options - part of a gathering surge of so-called "virtual R&D" around the world - will still benefit Europe in various ways. But the commitment is less far reaching than when a Japanese company invests in its own European design and development facilities.

The contrast between Canon's approach and that of most other Japanese companies was underlined this summer at the ninth annual conference of the UK-Japan High Technology Industry Forum, held at Gleneagies in Scotland. Of four pre-sentations in a session titled "Japanese R&D in the UK", Canon's was the only one to deal with the complete process of innovation, includ-

ing commercialisation. The other three companies at

£530m new semiconductor factory Gleneagles were Toshiba and in Scotland - announced last Hitachi, both of which have basic research centres in Cambridge working on quantum physics with the university's Cavendish laboratory, and Elsai, a drugs company which is spending £50m on a neu-rosciences lab at University College London. "Once we prove a project to be worth exploiting, it will be continued in Japan," the conference was told by Yutaka Tsuchiya, the

lab's administration director.

By coincidence, the one-in-four ratio at Gleneagles reflects slightly generously - the proportion of Japanese "R&D" units in the UK which do more than either just basic research or local modification of products. In continental Europe, the proportion is less favourable

According to the latest official government figures from Tokyo, Japanese companies claim to bave no fewer than 284 "R&D facilities" in Europe. The UK has the largest number, 83, followed by Germany with 53.

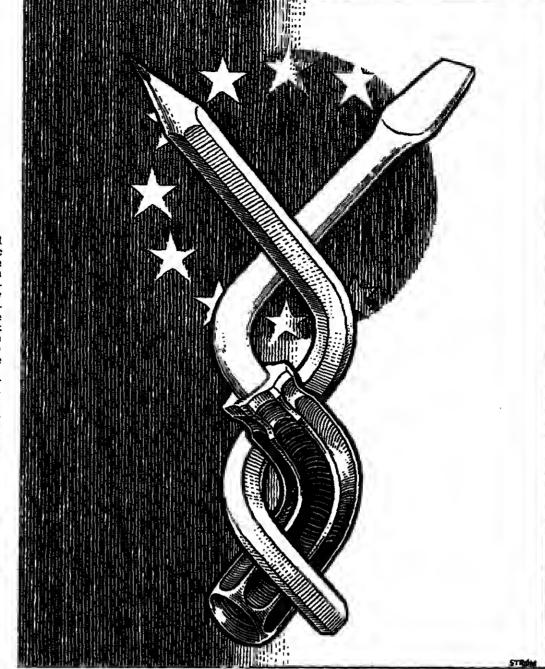

Kiyonori Sakakibara, an expert on international R&D based at the London Business School, confirms that the UK figure - and, by impli-cation, the German one - "is an over-estimate. It includes all sorts of preliminary technical activities".

A better indication of the amount of real Japanese R.D&D in Europe is the figure of 65 units which are classified as "independent", or not factory-based; 19 of them are based in the UK, 18 in Germany.

But even this classification is confusing. It mainly covers research units, including the three which presented at Gleneagles. But it also includes Nissan's European Technical (development) Centre north of London and NSK's ball-bearing facility near Nottingham, which are both linked to the companies' facto-ries in the UK and elsewhere.

Some of the reasons for doubt-lng whether research operations will move down-stream into design and development as automatically or smoothly as theorists suggest are examined by Sakakibara and Eleanor Westney of MIT in a paper on the evolution of cross-border technology manage-

ment by Japanese companies.\* One discouragement lies in the long success which many companies have had in collecting foreign technology for use in their laboratories back home. Even when top management makes a strategic commitment to push more real product development abroad, established relationships and patterns of communication lead the home country R&D organisation to continue

treating the growing local unit as just a listening post, say the aca-

As a result, the unit finds it difficult to recruit and keep good local technical people. "This difficulty reinforces the belief of the home country organisation that the local [unlt] can never match the product development capacity in Japan," say Sakakibara and Westney. A very strong commitment hy top technical management is needed to overcome this problem, they argue.

That may not be enough. Arroud de Meyer, a professor at Insead in France, Identifies a similar impediment, involving managers and technical staff at all levels. Foreign R&D centres take an inordinate time to establish credibility with staff at their home country bases, he says. The French R&D unit of Corning, a large American multinational took from 1969 to 1981 to win its spurs; it only did so when one of its research projects became a big commercial SUCCESS.

A further barrier cited by de Meyer is communication difficulties between foreign units and those at home. Electronic communication of various kinds is all very well, he

says, but "the thing companies don't understand is that information only becomes knowledge if it's consensually validated - if you can actually see people in the same room say yes or no, and feel how they say it. You don't get that on an electronic network. Even teleconferencing impairs the informality and

openness which people need to work together in complete trust." This is less a problem for standalone research units working on projects separate from those in the home country than for product development units working in an integrated fashion with the bome base - and sometimes with each other.

Although no Japanese company bas yet had the time to develop as much research, design or development activity in Europe as US multinationals such as Ford or IBM, the Japanese are aware of these co-ordination problems. As David Calracross, a UK aca-

demic, points out in a new book on Japanese multinationals\*\*, most long-established US multinationals still do most of their advanced design and development work at home. So it is not surprising that the current level of "real" Japanese activity in Europe is limited, however great its potential.

By the same token R&D spending

ahroad by Japanese companies is still ontranked considerably by expenditure by foreign companies in Japan. The average size of for-eign R&D units in Japan is also much larger, Cairneross reports: many have over 100 staff, whereas Japanese facilities in Europe and the US employ between 10 and 50. except in the motor industry.

Time may change this balance, but only gradually. That makes Canon's two spin-offs all the more striking. The true test of Canon's internationalisation, as for other Japanese companies, will be if it manages over the next decade or so to grow at least one big worldwide businsss based on products designed and developed abroad. It has made a better start than most. \* Technology and the Wealth of Nations. Edited by Nathan Rosen-

berg. Stanford University Press £13.25 \*\* Japanese Multinationals: Strutegies and Management in the Global Kaisha. Edited by Nigel Campbell

## PIONEERS AND **PROPHETS**

## Mary Parker **Follett**

Even in academic circles the name of this Bostonian polymath (1868-1933) occasionally provokes the question "Mary who?". Follett's posthumous fame, however, is growing and a new book due to be published in

January\* seems certain to bring her work to a wider audience. Peppered between extracts of her writings on conflict, power, leadership and other issues moreover, are glowing testimonials from distinguished authorities such as Rosabeth Moss Kanter, Peter Drucker, and

Henry Mintzberg. "Follett'a espousal of mutual problem solving foreshadows employee involvement, participative management. quality circles and other team-based approaches to involving the workforce in diagnosis, analysis and solution finding," says Moss Kanter.

Drucker enthuses: "Every one of her comments is fresh, pertinent and insightful, but her true importance lies in her vision. She saw the society of organisations and she saw nanagement as its generic function and specific organ well before either really existed . She was the prophet of

A political scientist who never worked in business, Follett applied her original ideas in the field of social work. She was profoundly interested in the individual in groups and in society, developing a brand of democractic governance based on participation and responsibility.
The seeds of late 20th century

empowerment, cross functional thinking and leadership styles are firmly planted in her writings.

differences of opinion and different interests should not be pushed under the carpet: ointly through searching for an "integrated" solution while imposed settlements, however benevolent, were ultimately doomed to failure.

Follett was eagerly listened to by senior managers in the 1920s, She developed her ideas in a series of lectures in New York in 1925 and just before her death at the manguration of the London School of Economics'. Department of Business

Administration. Her advocacy of conflict as a constructive and creative means of problem solving and her criticisms of hierarchical structures were out of tune with thinking after the second world war, and ber ideas fell into neelect in the west. Drucker rejects sexism as an explanation, Moss Kanter is not

so sure. The Japanese, however, were not so blinkered and incorporated much of Follett's teaching into their management culture in the late 1950s. Much of the credit for

nearthing the Follett story descries to go to Pauline Graham, editor of the forthcoming book. Graham, now a freelance lecturer and consultant in North London discovered her "mentor" in the

Years ago I was shown around Unilever's research laboratories at Port Sunlight, in the north of England. Everywhere I looked, washing machines and driers churned and whizzed. The researchers I was introduced to were preternaturally brainy. There were equations on black-boards. It was very bush-bush. The stuff

they were testing was doubtless a

As a result of that visit, I came to appreciate the intense technological and marketing effort that underpins the dull-sounding, but in fact mani-cally competitive, detergents market. Europe: £5bn a year.

But I have a small problem. My clothes last too long. I create no friction, so they never wear out. Some of them are older than Michael Portillo. I want them to shred and rot, so I can buy some new ones. I need Persil Power in its original formulation, or even something zanier: Persil Splatt!! With vicious Persil Splatti! I could become a new

Unilever should stop apologistng and switch to the attack.

It is easy to tease newspapers about their smugness and sluggishness. Jon Katz, a US media critic, wrote recently in Wired magazine that newspapers were besieged. Televi-sion has stolen much of their news, magazines their advertisers and best writers, cable many of their younger readers. And the digital revolution has pushed them still closer to the wall." Newspapers were "the biggest and saddest losers in the Information revolution...our least hip medium, relentlessly

one-way, non-interactive. Katz is unimpressed by newspapers' efforts to join the media revolution. So far, he says, on-line newspapers do not work conceptually or commercially. With few exceptions they seem to be expensive hedges against on-rushing technology with little rationale of their own.

We have heard all this before. But

are doomed to early wipe-out, even though they need to re-attract an alienated public. If newspapers are to invest heavily in anything, he says, perhaps it ought to be in younger, more talented, more diverse staffs so that they can rediscover their vibrancy and relevance.

Katz doesn't think that newspapers

I agree. I believe that newspapers will still be around when man is on Mars. But they need their own revolution. My crystal ball shows enormous clouds of advertising expenditure forming and massing, like inter-stellar gas, and sweeping this way. But to claim their share, newspapers must spend mightily.

They will have to bid competi-

tively against other media for the best writers, editors, investigative reporters, commentators and analysts, and for those rare souls who can inject pace, flair, quirkiness. eccentricity and fractiousness into newspapers' tired veins. This sort of thing is called old-product develop-ment. It can be just as exciting as Persil Splatt!!

## With corporate profits on the rise, now's the time to move into blue-chip equities with Robeco NV.

The managers of Robeco NV consider the world economy to be beginning a period of sustained non-intlationary growth. Around the world, corporate profits are rising; and many equities are attractively priced. The long-term outlook has seldom been better; but choosing the right investment will take expertise, timing and up-to-date

Access to global investment management

Robeco NV is the flagship international equity company of the Robeco Group. It aims to achieve a balance between dividend income and capital growth by investing in blue-chip companies with a proven record of success. To date, assets under management exceed \$5.5 billion. Not surprisingly, Robeco NV is often seen as the

standard by which investment managers are judged. Over the past ten years, Robeco NV has achieved an annual average return in US dollars of 16.6%. So if you had invested \$10,000 in September 1984, today it would be \$46,580. or send us your business card.

This underlines the validity of the Group's longterm, globally-diversified investment philosophy. For over 60 years, the Robeco Group has given investors the flexibility to profit from the world's equity, property, bond and money markets. To take advantage of growth and investment performance, wherever it is strongest.

The service that reflects your own values A Personal Investment Account with Robeco Bank gives you access to this wealth of investment expertise and to a reliable, confidential personal service. Now is the time to open one,

fred.

Likely weather in the leading business centres 

The recession in Europe may be over, but airline passengers and hotel customers are still being cautious with their money

# Dream of luxury loses its appeal

irline executives are the first to edmit that travelling business cless on short European flights these days is an expensive way to

drink champagne. This unexpected candour from an industry which relies on selling dreams of luxury travel that rarely live up to reality is no sudden occident. In recent months, eirlines have become increasingly worried by the continuing migration of their most profitable business customers to the economy cabins on their

European services. During the past four recession-hit years, many business travellers were forced by rigid company bud-gets to abandon first- or businessclass air travel. But with signs of economic recovery, many airlines were hoping to see business travellers flock back to business class.

Although first- and business-class traffic has picked up, especially on long distance, intercontinental flights, there has been no great rush to return to the business cabin in Europe. The reason is simple: husinessmen still find it hard to justify the heavy club-class premium on

A survey by the Gemini Consulting group of 50 leaders in the European aviation industry shows air-lines acutely aware of the challenge facing them. What they have to do, the airlines now realise, is rekindle passenger enthusiasm for air travel through product development and

Kieron Brennan, the Gemini vice-president who conducted the survey, says that all the airline executives interviewed agree that the European industry now has to adapt to a much more consumerdriven market.

"We've always said we were customer-locused, but over the next couple of years we are really going to have to prove it," explains one respondent. Another says: "In the US the customer plays a key role in pushing for lower fares. In Europe there is no visible consumer move-ment yet, although we're beginning to see the signs on the most competitive routes.

Many feel that consumer demand rather than European air transport liberalisation will become the driv-ing force for change. "Airlines are adapting to the same change in consumer attitudes that has taken place in the car industry," says Brennan. "A few years ago people were proud to pay a premium to buy a Mercedes. They are now proud to pay less for a Lexus."

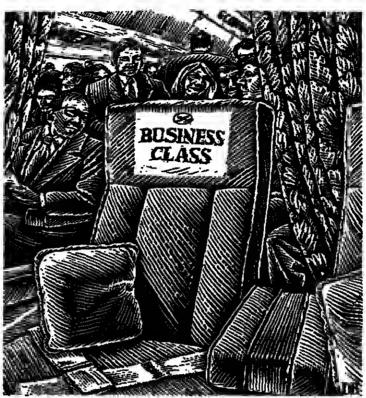

Airlines, it is acknowledged, will only survive if they respond to the demands of air travellers. "We used to think that liberalisation would create the environment to change. Now we believe the customer will. The customer has less loyalty to flag-carriers than governments have," remarks one respondent.

An airline executive adds: "The whole industry has been run for too long by aviation enthusiasts and civil servants. It's now time for a consumer-led, businesslike culture." The survey shows that the majority of respondents expect only one in five passengers to travel business

class by 2000. Competition for husiness passengers on long-distance flights has already led to significant changes in inflight services and products. An increasing number of airlines have dropped their first-class cabins on transcontinental rontes; instead they offer first-class service at business-class fare. In Europe, however, airlines are

still offering "an economy service at a business-class fare", as one airline executive puts it. Many travellers who fly business class on long-haul flights feel cheated by European business-class standards and prices after being treated like kings on transatlantic flights, Brennan says. In future, European businessclass passengers will have to be offered a wider menu of value-added

services (for example, baggage col-lection and delivery, improved lounges, better seating, chauffeur services). Airlines will also have to speed up their rate of product innovation and continually upgrade and improve business-class services.

"It simply won't be sufficient to launch with great faniare a complete revamp of business class and then do nothing more for five years," says Brennan, British Airways, for example, has just announced a £70m relaunch of its Club Europe business-class services. And high time. The original Club Europe brand was launched in 1988. Many airlines already offer some of these new and enhanced services

But the survey suggests that the

airlines' offerings are - at best patchy and fragmented. Such services are integrated only weakly with the airlines' sales and distribution channels, says the report, so that only the most assiduous customers can find out about them. As one executive traveller says: "I look forward to the day I am treated as well as a UPS or DHL parcel."

# Rooms with a budget price

who hope their employers

In the UK, it is only 3 per cent.

France's budget hotels cover a who hope their employers will allow them to return to huxury hotels now the recession is over should prepare themselves for some depressing news. All over Europe, hotel companies are convinced they are about to see a rapid increase in demand for the sort of budget hotel that has a Happy Eater

restaurant ettached to it. Forte, which owns the Happy Eater chain, is rapidly expanding its budget hotel business. It is building 22 new Travelodge hotels in the UK this year, bringing the total to 114. In 1990, Forte had only 50 Travelodge hotels in the UK. A room in a Travelodge costs £33.50 a night.
Forte is due to open two new

Travelodges in Spain over the next three months. It already has two in Ireland and four in France.

Holiday Inn is working with franchisees and joint-venture partners to build 60 Holiday Inn Express hotels in Europe over five years. The hotels will be in Germany, Poland and the UK and will charge £39 e night, including continental breakfast.

France has the most advanced budget hotel industry in Europe. but Forte and Holiday Inn believe the rest of the continent is about to catch up. John Miller, sales and marketing director of Forte's road-side restaurants business, says about 15 per cent of hotel rooms in Paul Betts France are in the budget category. In the US, the figure is 25 per cent.

wide range. At the Formule 1 chain, run by Accor, guests share bath-rooms and pey FFr130 (£15.50) e night. Miller does not think UK travellers would put up with shared bathrooms. Mr Jean-Claude Luttmann, co-chairman of Formule 1, thinks he might be right.

Accor has opened three Formule I hotels in the UK, but they have not been a success. The company has done better in France, where it has nearly 300. Accor's 400 Ibis hotels, which have private bathrooms and charge FFr260 (£31) a night, are probably closer competitors to Travelodge and Holiday Inn Express. Forte's Travelodge rooms are

built in a factory and then assembled on site. They have en-suite bethrooms, but no telephones, although the company is considering installing them. Holiday lnn Express hotels will have telephones.

While the hotel chains are convinced demand for these products is rising, they concede that some business travellers will escape them and stay somewhere more expensive.

Miller believes junior staff who were not allowed to travel during the recession will now stay in Travelodges. Tim Clarke, managing director of Holiday Inn in Europe, says the Express hotels will be for travellers arriving late.

Programme

# Whistleblowers blast the pirates

van Cox, European counsel for the Business Software Alliances, declared himself

Alan Cane reports on a promising start for Software Crimeline

Piracy is thought to cost the easily it can be accomplished. mised by being asked to work understand - and so on

satisfied. Tha first two days of operation of "Software Crimeline" bad produced more than two dozen telephone calls, and the work of sorting the genu-ine from the mistaken or malicious was already in progress all this three weeks before the organisation starts to reward whistle-blowers in earnest.

BSA is an aggressive indus-try lobby comprising the world's principal personal computer software suppliers. Software Crimeline, announced last week, is the latest initiative in the escalation of its war against software pirates - companies or individuals who copy software rather than pay for the genuine article. The alliance reckons to have brought more than 500 legal ections against euch organisations

industry more than £8.5bn a year in lost revenues, almost half of which is incurred in Europe. Tha figure for the UK is £328m. The UK Federation against Software Theft selzed £25m worth of illegal software in the first half of 1994. Nevertheless, Britain is one

of only aix countries where legal software sales exceed 50 per cent of the market. In Pakistan, Thailand and the United Arab Emiratee, for example, pirated software represents 99 per cent of the mar-

Software piracy is easily perpetrated and hard to detect. Copying software on to blank computer discs is simple. Soaring sales figures for glossy manuals covering the operation of popular pieces of soft-ware are one indication of how

Through Software Crimeline. individuals are being encouraged to ring a hotline number - 0800 510510 - to report the use of pirated software. The carrot, in this case, is the promise of a reward of up to

£2,500 in the case of a success ful prosecution. The scheme has already been tried successfully elsewhere. In Australia there were 150 calls in the first week alone. In the US, a hotline has proved successful although no reward is offered. What sort of motive do peo-ple have for shopping their employers or colleagues? Cox

by disgruntled ex-employees out to settle scores. But most calls, he believes. come from people who feel

accepts that a number of calls

are malicious - made, perhaps,

with illegally-copied software. This can happen when a company under-estimates its software budget and copies existing software.

Cox leaves no doubt that the BSA is losing patience with companies where senior executives plead ignorance of the law, and is ready to press for harsher action. Under Britain's software protection laws, penalties include up to two years' prison for executives of offend-

e says: "We have a feeling that the process of education has been going on long enough. We were prepared to give people the benefit of the doubt at first, but now we are tired of the nld excuses - 'We didn't know', 'We didn't

Cox makes the point that there have been changes in software industry practice which make piracy increas-ingly indefensible. High software prices used to be blamed, but costs have fallen, sharply in many cases. Equally, there were complaints about restrictive licensing practices from large companies with a requirement for many copies of

sing arrangements had been agreed, he said. A survey of computer ebuse carried out by the UK Audit Commission makes clear the kind of trouble software piracy can cause companies. It notes that one organisation had to pay £30,000 for new licences while another incurred costs of

a particular program (software is often licensed rather than bought outright). Easier licen-

£100,000 after a programmer was caught with 60 discs filled

with illegal programs. While nobody quarrels with BSA's aims, there are some qualms about its latest methods. Among the dangers is tha possibility that a malicious or greedy employee could install illegal software on his employ er's system - then tip off the BSA.

Typically, once the BSA believes it has anough evi-dence against a company, it obtains an "Anton Pillar" order from the courts, which enable it to search premises and seize suspect computers

The telephone hotline is just one of the ways the organisa-tion has for gathering informa-tion about illegal software use. But Cox has no intention of surrendering the element of surprise: "There are some things." he says, "that I am not prepared to talk about."

# Dixons to open specialist stores

Dixons, the UK's largest electrical retailer, is launching a new store called The Link, claimed to be the first specialist retailer of e range of communications, entertainment and information networks and services.

Although it will also sell equip-ment, The Link's main focus will be helping customers select and sign-up to services such as mobile telephone networks, satellite and cable television networks and on-line computer services - the first time all these services have been marketed under one

Dixons says that being a retailer of the latest technology means more than selling hardware such as video recorders or computers. It also means combining access to a network with a piece of equipment. This calls for a different store environment, with information and demonstrations provided by specialist staff.

"These products and services will be one of the fastest-growing consumer markets of the next few years", says John Clare, Dixons' chief execu-

unlike any retail format she has encountered in Europe or the US. It could help Dixons become a leading marketeer of interactive communica-tions services as these develop. The group is opening four Link stores in the London area, starting with King-ston on October 31, then Enfield, Chiswick and Lewisham. Four more open next February and the group will decide next May whether to extend

Although it acquired the Currys and PC World chains, and Silo in the US - later sold - this is the first time Dixons has launched e new concept.
Ideas for The Link developed out of plans for a mobile telephone

Stores will have large central desks, giving customers space to fill in applications for services, assisted by staff. The walls will carry information boards and hardware that can be tried out. A mobile communications area will offer details of consumer equipment, networks and tariffs - including Mercury One2One, Orange, Cellnet and Vodafone.

The pager area will offer both conventional pagers and services, and Sarah Carpenter; special projects new "calling-party pays" pagers, such director at Dixons, says The Link is as Mercury MiniCall and Swatch's

John Clare: "These products and services will be one of the fastest-growing consumer markets of the next few years."

new wristwatch pager, The Beep. A section devoted to satellite television will include five bays where customers can view different channels. Dixons hopes later to include cable TV operators.

A telephone area will sell a wide range of faxes, and will also market BT network services, such as call waiting, call diversion, and caller number display - the first time BT has sold such services through a third

A final section will be devoted to on-line computer services, including Delphi and CompuServe - both offering exclusive services such as computer shopping, plus a gateway to internet, the global computer network and Tel-me, a network aimed at

Dixons has not always enjoyed the best reputation for customer service, but says The Link's staff have been specially selected and given a threeweek course including instruction by magazines.

service providers. Stores will earn a normal retail

margin on hardware, and agency fees or commission on sales of services. Sarah Carpenter says that Dixons was selling some services in its other stores, but that these were not equipped to capitalise on the opportunity. Many consumers signed-up for services in specialist outlets, some run by service-providers themselves. or answered ads in newspapers or

## DEC tests over the Internet that it is a robust system when

No intelligent consumer would buy a car without first taking it for a test-drive. So what about computer products? Car buyers go to a showroom when they want to try a new model. but buyers of computer systems can now evaluate hardware or software without ever leaving their desks.

Digital Equipment Corporation, the US computer maker, is allowing users of the Internet, the self-regulating global computer network, to test the company's Alpha computers by using their own software programs on its hardware. Without having to go near the machines, users, via the Internet, can tap into one of four Alpha computers located in the US.

By activating a standard Internet file transfer protocol,

they can then transfer their software to a DEC machine and effectively use the hardware from any range.

So far, more than 7,500 users internationally have logged-on to try out DEC machines and test its product claims of speed

many systems in the

and efficiency.

James Bishop, faculty fellow
in the department of physics at

the University of Notre Dame, Indiana, says that when hardware bad to be shipped to customers for testing, time was The scheme also reduces

DEC's marketing costs. "We only have to manage a handful of machines connected to the Internet, rather than running marketplace, or loaning out a large inventory," says Russ Jones, DEC's marketing manager. Some users log on to

test their own programs. Software developers, for example, use DEC machinery to evaluate new codes before attempting to market them,

while software users use Alpha equipment to check for bugs in their own systems. "We have been encountering problems in running certain

software on our systems," says Ignacio Lizardo, an engineer et United Technologies Corporation's chemical systems division in San Jose, California. "By transferring our program codes to the DEC systems we can determine if it is e problem with our system

or see if we need to make hardware upgrades." DEC believes the Internet allows for more rigorous testing of its products. "The fact that it is in the public domain on the Internet allows people to satisfy themselves

they combine the hardware with their own software," says Obvier DeWandre, programme manager for education and research at DEC Europe. Software buyers can also test packages before they hand

over their cash. Unipalm, the UK's largest provider of Internet connections, allows network users to run several programs via the Internet before deciding to purchase. Users who want an

evaluation copy of a software program are given a "key" not unlike an ATM pin number that allows them to download programs on to their systems. The programs are "time-bombed" so that they work only for a limited period. "If you like the program you get in touch with us and we will sell you a permanent key," says a Unipalm spokesman.

## ARCHITECTURE

# 100 years of London pride

Colin Amery on centenary celebrations for the city's survey

hundred years ago a remarkable project was started that has become famous as the Survey of London. Its centenary is being marked by a display et the Museum of London in the Bar-bican (until November 27), and a slim volume has been produced by the survey's general editor. Hermione Hobbouse, as a permanent reminder of tha importance of a rare and continuing work of scholarship.

The idea of carefully recording the buildings of a whole capital city in measured words and drawings could have been pedestrian and boring. But for anyone interested in architecture, the existence of the survey is as reassuring as the presence of Saint Bartholomew's Hospital is to the City of It is good to know that quiet London.

and serious expertise is being supported from the public purse in the interests of learning, knowledge and excellence. However, unlike Barts' marvellous hospital and medical school, the survey is not in danger of being targetted by official vandals. Indeed, the survival of this

small group of dedicated schol-

something of a small miracle.
The survey started as a result of pressure from e group led by the great arts and crafts architect C R Ashbee in the 1890s, and thrived initially with the support of the London County

Council. That support was continued hy the Greater London Council until its abolition in 1986. The GLC had nurtured a specific to look after the historic architecture of London. Its historic buildings division wes e pio-neer in the care of listed buildings, and became an exemplar to English local authorities.

When politics intervened in the 1980s, the division was taken over by a quango, English Heritage. Thankfully, someone somewhere was wise enough to see that the scholarly survay belonged alsewhere, so it was given e bome in a non-departmental public body, the Royal Commission on the Historical Monuments

of England. This was inspired, because the founders of the royal com-mission bad an intellectual sympathy with the founders of

ometimes public money ars, historians and measurers torian and Edwardian states-is spent wisely. One in post-Thatcherite Britain is men like Sir John Lubbock, author of the first Ancient Monuments Act of 1892. During much of the 19th cen-

tury, government action to pre-serve or care for historic build-ings had been ineffectual. It took great energy and political manoeuvring by groups and individuals to change all this. As a result, the end of the 19th century saw the formation of the National Trust, the Society for the Protection of Ancient Buildings (created by William Morris and his friends), ths London Society and the London Topographical Society.

Te have bacome used to the system that evolved tem that evolved at that time, but it took a series of campaigns to alert politicisms to the need to preserve the past. It was the architect C R Ashbee who had the idea of creating local watch committees to draw attention to the historic fabric of the par-ishes of London, and to spot-light areas or specific buildings

under threat. In the words of Ashbee: "We plead that the object of the the London survey. There are work we have before us is to Commission on the Historical portraits in the exhibition at make nobler and more Monuments of England, at the Museum of London of Vic-

great city whose axisting record we seek to mark down; to preserve of it for ber children and those yet to come whatever is best in ber past or fairest in ber present, and to stimulate among ber citizens that historic and social conscience which to all great communities is their most sacred The work of the London survey represents in elegant and

disciplined form an expression

of those ideas. The display at the Museum of London shows

many of the glories of London

which are also manifest in the great volumes that have sppeared during the last 100 years and which continue to be produced by a dedicated team. There is a chance to hear much more about the work of the London survey in a series of lectures on Mondays (until November 17) at the Linnean Society, Burlington House. Piccadilly, London, Further information can be had from the Survey of London, Newlands House, 37-40, Berners Street, London, W1, 071-631 5065.

Having defended many cli-ents against charges of anti-

Competition lawyer John Swift tells Charles Batchelor that he is intrigued by the chance to change sides and start setting the rules

ride from Didcot Parkway, Oxfordshire, to Paddington, London, takes just over 40 minutes, a journey time that has stayed the same for 10 years, despite the investment that has gone into Britain's railway.

Swift's journey to work may not have changed, but almost all other aspects of the system are in flux. As the recentlyappointed regulator of an industry which is being made ready for privatisation, this QC and competitioo lawyer will play a starring role in shaping the railway of the future.

Swift, who has an engagingly dry sense of humour, is not the only new player in the rail game. Robert Horton, combat-ive head of Railtrack, which owns the rail infrastructure, and Roger Salmon, the more reflective merchant bankerturned-franchising-director, will also help forge the new network. But they and others wili require Swift's approval for any deals they put

At present, Swift and his team are attempting to impose order on the mass of agreements which are being drawn up between the 50 or so organisations that have replaced the monolith that was British Rail.

It is Swift's job to act as arbiter between the parties - to ensure fair play, for example, between Railtrack, say, with its monopoly of the 10,000-mile network, and a company such as Gatwick Express, which is hoping to win a franchise over a mere 27 miles of track.

Swift has already given notice of his intention to intervene vigorously. The consultation process he initiated last July suggested that Railtrack would have its work cut out justifying the returns the Treasury expects it to make on its

Swift chooses words carefully, but his intentions are clear. He says: "If I were to

form the view that Railtrack's charges were such as to give it risk for investors. a disproportionate return against tha risks it is running, or its costs, then you come close to an abuse of a domi-

Although Railtrack will have a dominant position by virtue of its size and sole ownership of the track, Swift says he is not there to pillory a particular company but to strike a bal-

There was little in Swift's The 50-year old Engen, who has been on the fast track background to suggest a legal career. The family company of Thomas Swift & Co was a firm since joining FTT as head of one of its defence electronics businesses nine years ago, was of Livarpool stevedores last week given operating responsibility for ITP's founded in the 1860s. Swift seemed set to continue in the family tradition, but won an insurance and communications open exhibition to University businesses. On top of his previous responsibilities, this College, Oxford, where he read classics and philosophy before leaves him in charge of businesses which generate While he was away at uni-\$17.4hm of the group's \$22.8bm versity, the family firm was in sales

Engen takes over his new responsibities from Dale Comey, 52, himself considered a potential successor to ITT hosa Rand Araskog, until he unexpectedly announced his

A lot could still happen before Araskog reaches the company's compulsory retirement age of 65 in October 1996, though, It was notable, according to one FTT insider, that Araskog did not take the opportunity last week to More personally, an efficient railway allows him to live in anoint Engen clearly as his heir apparent by naming him president and chief operating

That could still leave the door to the chairman's office aiar for Robert Bowman, 39, the chief financial officer. Though considered a long shot for the job, Bowman has wowed Wall Street in his two years with the company and has been talked about as a future ITT boss. Meanwhile, there seems little

chance of Araskog going before his two years are up. "We'll have to drag him out of here screaming as it is," says the

## EvA: audacious optimism

Eugene van As, the man who engineered South African paper producer Sappi's \$1.6bn takeover of US company S.D. Warren last week, has long had a reputation as one of South Africa's most aggressive and audacious businessmen, writes Mark Suzman An Afrikaner by birth, van

As speaks fluent English and German and has been Sappi's chief executive since 1978, becoming executive chairman in 1991, During that period, through a number of large-scale, high-risk deals, he has transformed Sappi from being a mid-size South African company to one of the world's largest paper producers.

Known within the com

by his initials EVA, van As is widely admired as a tough. no-nonsense manager with a fine grasp of the details of the paper business and an ambitious, but impressive vision of Sappi's future as a global paper company. Nevertheless, there is also

suspicion, particularly among shareholders, that he has a tendency to put his empire-building ambitions ead of their interest. Over the past decade he has consistently made new deals just when more conservative people might be consolidating existing operations.

His first big gamble was the construction of a R1.6bn Kraft paper mill in the eastern Transvaal in the early 1980 Then, in 1988, Sappi picked up Courtaulds' hage southern African pulp interests when the UK company disinvested In 1990, van As began Sappi's international expansion programme with the purchase of five UK paper mills, and in 1992 bought German-based Hannovier Papier. Despite van As's

trrepressible optimism however, nearly all the deals, and particularly the Hannovier takeover which seriously dented earnings over the past two years, have proved very difficult for Sappl to digest. As a result, the company has at various times been forced to take drastic action, such as suspending its dividend, before returning to an even keel.

Now, just as Hannovier appears to have turned the corner, van As has taken his biggest gamble yet, with the highly leveraged Warren deal.

Once again, he is confident he has guessed right on the cycle and paid a reasonable price; once again shareholders are nervous of the consequences. But as one analyst notes succinctly: "Whatever else you may think of him, the guy

## Musical chairs at Westpac

certainly has got balls.

Last week's changes at Westpac, the Australian bank, have increased options for succession to the managing director's chair, which will be occupied by expatriate American Robert Joss until early 1998, writes Bruce Jacques.

Joss, who earned his reputation reorganising US bank Wells Fargo, has reassigned the jobs of the internal contenders and brought in former Citibank Australia chairman, Michael Cannon-Brookes. Cannon-Brookes, currently managing director of law firm

Freehill Hollingdale and Page, has been appointed Westpac's group executive, operations. The new position confers stewardship of the bank's hurgeoning support operations and reports directly to Joss. But the bank's internal changes, styled by Joss as a new focus on performance and growth following an era of internal repair, may hold more

clues to the succession. They include moving the high profile former Treasury bureaucrat, David Morgan, from retail banking to head a new institutional and international banking division. Morgan's position at retail, which controls the bulk of the bank's assets, has been taken by former institutional banking head, Owen van der

Biggest promotion in the shuffle has gone to Barry Robertson who is overseeing the bank's extensive problem asset sale programme as chief of property finance and asset management. He adds the commercial banking division

Speculation on the changes has centred around Morgan who was touted for the top post before Joss was appointed last year. Morgan's new assignment has perhaps unfairly been interpreted as a classic sideways move.

But it would scarcely be out of character for Joss to play management musical chairs at least once more.

The twice-monthly ocwsletter covering current legal issues for lawyers advising industry in Europe. Business Law Europe combines up-to-date timely reporting with down-to-earth and practical comment, setting news io context and identifying the real meaning of events and their implications for European business.

## KEY AREAS COVERED INCLUDE

competition law - restrictive practices; monopolies; market domioance: merger control; deregulation of state-controlled sectors; cootrol of subsidies

intellectual property - copyright; patents; designs; trade marks: licensing; technology transfers market access - commercial laws: tort liability

regimes; international trade measures, regulations and agreements; export controls; public procurement regimes; GATT/WTO framework corporate law - the impact on cross-border business

of company luw; employment law; finance, tax. property and insolvency law

International dispute settlement - jurisdiction: arbitration

European law - current cases before the European courts that are likely to have an impact on the future of business

VIENNA

Europe's biggest and most popular contemporary music festival, Wien Modern, opens on Sunday. Founded by Claudia Abbado in 1988, the tival has a special focus this year on American composers, led by Morton Feldman and George Crumb. Wien Modern dominates concert life in the Austrian capital for a month: A general pass costing £40 ets you in to more than 40 events, including concerts by Abbado and other leading contemporary music interpreters.

COPENHAGEN The Royal Danish Ballet presents a programme of new choreography, including a creation by Kim Brandstrup, at the Royal Theatre.

**AMSTERDAM** A major retrospective of the

late 19th century French painter Odilon Redon opens at the Van Gogh Museum on Friday. It brings together 180 works, including soma important pieces which have The aim is to explore Redon's development sources and influence, and to demonstrate how the dreamlike nature and Symbolist aspects of his work provided a link between 19th century Romanticism and 20th century Surrealism. The exhibition comes from Chicago and moves to the Royal Academy In London in

# Royal Opera and the twisted Ring

Daved Murray looks at why the new cartoon-style version of Das Rheingold led to booing at Covent Garden

here was tempestuous booing after the Royal Opera'a new, cartoonstyle Das Rheingold last Thursday. It sounded genuinely angry and disappointed, not orchestrated in advance, and it was quite specific. Once the soloists and the conductor, Bernard Haitink, had been warmly applauded, ona after another, the producer and designer were greeted with howis of fury on a truly Wagnerian scale, unprecedented - within recent memory, anyhow - at Covent Gar-

You might think: Wagnerians are a conservative lot, they want all the hoary old paraphernalia intact, and the story enacted with uncritical piety. The Wagnerites, here including many Wagner-lovers who were seeing their first Ring in the flesh, would retort this Rheingold production is unforgivably silly, facetious, inconsequent, diminishing. Yet it is worth remarking that on the next night, Die Walkure - staged in just the same spirit - earned as much delighted applause as booing: less

fact. The seeds of the trouble (honestly fated, as I think) lay in Wag-ner's own notion of the Gesamthunstwerk, the complete artwork - which could only be opera in which everything heard and seen should be dictated by an overriding idea. In Wagner's case that was easy; his own taste was for picturesque naturalism, and at Bayreuth he used to supervise every detail of the sets, the costumes, the wigs, the action. Long after he died, the family establishment that Bayreuth came was still dedicated to preserving all those details.

Before then, producers and designers were barely nodded to. Their tasks were respectively to organise the chorus and help the singers avoid bumping into each other, and to illustrate the librettist's notional locales attractively, and when appropriate impressively. Earlier composers - Monteverdi, Mozart - ware often closely involved with the staging, but in the later 19th century the burgeoning of operatic apparatus made that unfeasible for anyone less despotinewsworthy, but an interesting cally privileged than Wagner, When

nal genius, was to realise it?

Part of the problem, as Wagnerians outside Bayreuth discovered, was that literal adherence to Wagner's detailed stage prescriptions soon looks naff, fusty, lifeless. Our tastes in stage manners change. The Royal Opera's clever producer and designer, Richard Jones and Nigel Lowery, must have decided early on that there was no mileage to be got out of staging Alberich's transformations into dragon and toad for real, nor the entry of the gods into Valhalla across the rainbow bridge, nor the wild ride of the Valkyries.

Part of the answer came from two visionary designers, Edward Craig and the Swiss Adolphe Appla, and it was driven home by Wagner's grandson Wieland. Simplify everything, even the visible action; take fussy visual details as read, and eliminate them; use modern lighting to set the stage suggestively and strip it down to an arena for the singing actors. Above all, honour

Wagner died, however, the concept of the work - which of the Gesamtkunstwerk lived on; and who, in the absence of the original work in the absence of the original work.

Never mind that some great operas seem not to be based on any "guiding concept" at all; for Wagner's, at least, we have the composer's own testimony that his were. Now, Der Ring des Nibelungen is a heady brew of despairing idealism and political prophecy, Jungian mythology before its time and importunate Affeki, fake-primeval epic and ripe 19th-century melo-drama. If there really was some overriding Wagnerian conception of the whole, to grasp it we should need to reformulate it in our own modern terms - which are inexorably different.

Ring producers in the 1970s and 1980s liked to fix it to some one modern concept: of political power, or class resentment, or familial tragedy. The peculiarity of the Jones/Lowery staging is simply that it is a pure post-modernist affair, where the designer's fancies have equal weight with anything else. It offers no all-in reading of tha operas, but plays catch-as-catch-can

with any ideas that they happen to trigger off, with visual cues taken from Picasso. Ernst, Klee and others too numsrous to mention. Making the giants Fasolt and Fafner into Siamese twins who share a suit is one such. Others include garbing the Rhinemaidens as gross rubber-ised nudes, having Fricka as well as Froh and Donner grow a long beard when deprived of the golden youth-apples, and putting Brünnhilde into a tracksuit with a Hallowe'en top and a dinky cheerleader's skirt. During the iunocent-age-of-theworld prologue, the Rhinemaidens had to weed their way among a hords of strange, blue-uniformed persons hustling in slow motion toward stage left, reminiscent of Thurber's cartoon for "The Day the

Dam Broke" but quite unexplained. In Die Walkire, those personages became corn-dolly figures with lofty headdresses. One of them, preternaturally tall, served as the tree from which Siegmund must draw the magic sword, and he had plainly outlined shoulder-pads. At the crunch point, Siegmund and Sieglinde pulled at his scarecrow arms

in opposite directions. Fricka's cart, originally "drawn by rams", was an armoured car: okay, but did it have

to sport push-button windows? For the epic battle which culminates in Siegmund's death, the lights go out at the crucial moment; and come on again, after an embarrassing pause, to reveal the remaining four characters in an absurd low-budget-sitcom row at the grave. The brute Hunding is not felled by Wotan's scathing gaze, but scram-bles off unharmed. Cruellest of all, when the loyal but guilty Brunnhilde prevails upon her father to mitigate her sentence - not to be snatched up by the first comer, but only by a great hero - and the heart-tearing crescendo reaches its climax, instead of the intended father-daughter clinch we have Wotan breaking suddenly away and retreating ecross half the stage. One of the great cathartic moments in opera is reduced to something shrinking and evasive.

his Rheingold founders upon inconsequence and sheer lack of purpose. At the close of the last Royal Opera Rheingold, Götz Friedrich had the effete gods tripping up Georges Guetary's "Stairway to Paradise" as decadently as could be, but at least they thought they were going some-where. Here they do nothing but chase a falling star, literally and ineffectually - and utterly at odds with Wagner's triumphalist music, though like all the rest of the score Haltink judges It to a nicety.

Even John Tomlinson's superbly Covent Garden's regular Alberich, Ekkebard Wlaschiha, is hobbled by being turned into a mere figure of fun. Robin Leggate's artful Mime awaits Siegfried for his fruition. Commendations to Paul Charles Clarke's Froh and Peter Sidhom's Donner for services in difficult circumstances, and to Jane Henschel. whose distinguished Fricka at last escapes her caricatured guise in Die Walkure; and to Gwynne Howell's unexpectedly sensitive Fasolt, Carsten Stabell's Fafner and Rita Cullis's Freia.

Robert Tear's Loge is of course incorrigibly engaging and musical. In Die Walkire, Ulla Gustafsson's very young, shy Sieglinde wields an affecting timbre and brave purpose, Poul Elming's Siegmund adds a raw, vulnerable edge to a finely developed portrayal (stopping short of the ultimate exposure), and Matthias Hölle is a Hunding of sterling menace. The great discovery is the tall American Deborah Polaski's Brünnhilde: recklessly heroic sing-ing, and a rare degree of wholehearted commitment. With some more intimately searching tone-colour, she must soon be one of the great Wagner singers of our day.

Nash Ensemble Lighting up the Wigmore

The Nash Ensemble, which over the last three decades has established itself as one of Britain's foremost chamber groups, invests so much in its performances that each concert becomes a special occasion. So much so, that Saturday's programme at the Wigmore Hall celebrating its 30th anniversary needed no "gala" trappings; it was imaginatively put together and no less

imaginatively played. The Nash musicians are almost legendary for being great communicators: they play with an obvious sense of enjoyment, balanced by that seriousness of approach that makes them such polished and stimulating performers. They are dedicated to exploring the byways of the repertory - the group'a make-up gives it versatility - with a special commitment to naw music. They are equally noted for their interpretations of French music. Indeed, Saturday's programme, the first in a series of six entitled A Golden Age of Parisian Music, was the start of a long birthday celebration. Between now and March, the Nash players will be covering the work of 13 composers from Saint-Saens to Poulenc, and providing audiences with many a rare treat.

We heard four composers on Saturday, beginning with Albert Roussel's busy Divertissement for piano and wind quintet. It made a piquent curtain-raiser, a complete contrast to the Ravel Trois Poèmes de Stê-phane Mallarme that followed, with Sarah Walker the consummate solorobust Wotan can make little of | ist. She projected the poet's lines that, and in the earlier stages | with intensity against the shimmerflutes, two clarinets, string quartet and piano. Saint-Saëns's Septet drew the audience back a musical generation to a more robust idiom and very different sonorities. It is not top-drawer Saint-Saens - the melodies are unadventurous, often unmemorable - but the Nash's smiling, spirited performance made good its shortcomings.

The second half of the evening was devoted to two works by Ernest Chausson: the Chanson perpetuelle, one of his last works, also exists in the version with piano quintet accompaniment performed here. Once again, Sarah Walker floated her mezzo with a perfect balance of ardour and lyricism. A ravishing performance of Chausson's Concerto for violin, piano and string quartet rounded off the evening, with Ian Brown the virtuosic piano soloist, and the violinist Marcia Crayford alert to the work's deeplyfelt emotion. This was music-making that brought a reminder of how the Nash Ensemble has enhanced the London music scene, and it whetted the appetite for more.

John Allison

Covent Garden's regular Alberich, Ekkehard Wlaschiha (left), is hobbled by being turned into a mere figure of fun

# INTERNATIONAL

## BERLIN

Staatsoper unter den Linden The Barenboim-Chéreau production of Wozzeck can be seen tonight and Sun, with a cast headed by Catherine Malfitano, Falk Struckmann and Graham Clark. SUNDAY NBC/Super Channel: FT Reports 2230 Sky News: FT Reports 0430,

fter several years of successful expansion. the UK publishing industry is experiencing a rare twitch of self-doubt. It has been shaken, a little, by the prospective demise of the net book agreement, which allows publishers to set the retail price of books to prevent discounting. The agreement is due to be reviewed by the restrictive practices court, but seams to be unravelling already as publishers and retailers divide over its contin-

ued usefulness. However, it is the growth in electronic media and new channels of information that has really got the industry stirred. The prominence of software stands at this month's Frankfurt Book Fair was a portent that publishers are finding hard to ignore: could developments such as these be the death-knell for the book-as-we-

The snapshot of a family at leisure in the 21st century, previously constructed by the fertile imaginations of science-fiction writers, is now a more tangible vicion: one parent snaps a credit card-sized disc of a novel into a compact computer with CD-Rom drive, sets the automatic scroll at the appropriate reading speed and relaxes for the evening; another prepares dinner from a recipe delivered in multimedia format on the kitchen screen; meanwhile, the children use interactive programmes to research their homework. That already assumes that all of them are not, en famille, watching television or a movie,

or listening to music.

The idea that the family home's booksbelves will be creaking with volumes of the Encuclopaedia Britannica, special interest reference books and a lifetime of novels seems

sadly anachronistic. Of course, publishers have been studying these developments for years; what has prompted the latest dip in confidence has been the recent check in the publishing resurgence of the past decade. From 1981 to 1993, the number of new titles (including new editions) published in the UK nearly doubled from 46,215 a year to 83,780. Even the expensive sector of scientific, academic and professional books recorded a near doubling of

This year, so far, has been a different story. Mr Clive Bradley, chief executive of the Publishers Association, describes the summer-to-Easter period as "disappointing". Despite a pick-up over the last couple of

# The final chapter

Electronic media are challenging the

book, says Peter Aspden

months, sceptics, who have all along insisted that the industry's expansion was unsustainable, are making their voices heard. They have long awaited a "turning-point" and, given the speed of developments in information technology, it is only natural that the very future of the book has become

a focus for concern. The two developments that threaten the book format are digitisation and the multimedia revolution. Digitisation, which allows text and graphics to be stored electronically, provides easy access to very large amounts of information. Multimedia packages present that information through text, graphics and sound which the

It is still common for people to find CD-Roms and screens relatively cumbersome'

user can manipulate. Vital markets such as education and business are expected increasingly to turn to such formats. Yet Mr Bradley points ont that the print medium is still holding its own: "Even in reference material, it is still a common reaction for people to find CD-Roms and screens relatively cumbersome, it is often much quicker to pick up a book.

"Multimedia, though it sounds fine in principle, needs to be well done to keep the attention for longer than a few minutes, almost like a movie. That costs a lot of money." He also points out that the information revolution has not

been matched by a revolution of the human mind: "We are all still waiting for someone who can awaken the mind in a new way, an Einstein for the era, but it has not happened

yat. Many of the new packages around do not offer a great deal more than modern text

When it comes to fiction, Mr Bradley finds it even more difficult to conceive of electronic publishing having a significant impact on book-buying habits. The most advanced development in this area is in interactive packages, allowing the reader to choose between several different endings, according to his or her mood.

central Belrut.

Once the novelty value has worn off, it is hard to see these packages competing against the attractions of a slim, cheap paperback that manages to maka up its own mind, Mr Bradley believes.

"Interactive media are fine for developing curiosity and search skills, but less satisfactory for books to be read sequentially," he said.

A measure of publishers' confidence in the book is their commitment to the most threatened sector of the market: the reference book. It might be thought that publishers would be bringing out new reference material only in CD-Rom form, phasing out the book in much the same way as record companies phased out vinyl records in favour of compact discs.

But that does not appear to be the case. Chambers, which specialises in reference books, has just brought out a new encyclopaedic English dictionary, aimed primarily at sec-ondary school children. Although it will come out in electronic form next year, Mr John Clement, chairman of Chambers Harrap, says he expects the book to out-sell the electronic version by about 10

"We are not expecting such books to die out in the near future," be said. "The book still has the buge advantage of sheer facility, primarily because of its portability and the pleasure which can be had from browsing it."

Mr Bradley echoes this sentiment: "The technology of producing a book is cheap, the cul-ture of reading a book is very well-established. That will take it a long way."

But once the costs of the new electronic media begin to spiral downwards, will the physi-cal frisson of leafing through a new volume he enough to ensure its survival? And will the new, computer-smart gen-

erations experience it at all? The view that curling up with a good book is one of the timeless pleasures of civilised life is about to face its most

CONTROL CONTROL CONTROL

The modern face here is a gaping hole where Beirut's heart used to be. Gone are the ancient markets, art deco cinemas, coffee shops of an ancient city and bordellos that made the Lebanese capital the Middle East's most glamorous play-ground and vibrant financial The remnants of the city's

Central Beirut has been razed in order to revive it as a financial capital, writes Mark Nicholson

Helene Rogers Beirnt's Martyr Square (left) will be demolished and (right) the artist's impression of the new city

American University of Beirut. "This is not all just for the public interest."

Mr Hariri maintains, however, that the prime minister's Solidere shares are held in trust and all profits will go to his charitable foundation, which has pald for the education of thousands of Lebanese in recent years.

Whether or not Mr Hariri stands to gain personally from the redevelopment, many are questioning the need to raze so much of the city in order to

revive it. Mr Assem Salaam, an archi tect in Beirut for more than 30 years and one of the hard core of vocal opponents, believes Solidere has destroyed the "social tissne" of downtown

Beirut, "Central Beirut had tradition and a memory. It played a role in being a meeting point of Lebanon's various communities. It played a role in the fusion of social classes. It had an enormous richness," be

He believes that no more than 20 buildings in the city centre were truly beyond redemption and can see no tustification for the scale of Solidere's redevelopment Landowners should have

been allowed to create smaller property companies to redevelop the city centre organically from its roins, he says. You are not developing from scratch an Abo Dhahi or a Jeddah or a Riyadh," he says alluding to Mr Hariri's back-

Beirut will be the biggest building site in the Middle East for the next couple of years

ground as a Gulf contractor. You are touching a medieval. Mediterranean city.

Solidere has adapted its plans in response to these criticisms, says Mr Nasser Chammaa, Solidere's chairman. The number of old buildings to be retained and restored has been increased to 266 from just over a hundred to begin with - and the company is canvassing architectural opinions on ways of recreating some of the old

"All of a sudden a portion of our memory has disappeared,"

he acknowledges. "For the public it's slightly difficult - but that will have to continue." Mr Hariri and his staff at Solidere believe that only through ambitious, comprehensive redevelopment can Leba-

non succeed. They liken Beirut's rehuilding to west Germany's reconstruction after the second world war - an unmissable opportunity to build an expanded and modernised infrastructure virtually from scratch. Mr Hariri is seeking to create

the kind of momentum necessary to bring back the skilled, Lebanese middle-class that fled the 15-year civil war - and revive the flows of private Gulf Arab wealth to the city. Both ingredients require confidence. Like Canary Wharf in London's Docklands, the project is an investment designed to gen-erate confidence. It is that confidence that will then lead to the city's revival

But in selling the new Belrut, even senior members of Lebanon's government differ over quite what a revived Beirut's economic role would be. Some, such as Mr Hariri. believe that Lebanon has a

fixture as a regional financial

hub, despite competition from Israel, which, with an economy 10 times larger, has its eyes set on the same target. Gulf Arabs would much rather invest in Lebanon, they argue, and Syria intends to use Beirut as a catalyst for its own gradual eco-

nomic opening.
Others, including Mr Riad Salame, the central bank governor, see Lebanon'e future as in complementary development with Israel. "We have different vocations," he says. "Israel is a predominantly industrial, high-tech country, but we will address the role of an intermediary. It is like the relation between, for instance, Japan and Singapore in the Far East."

There are also political uncertainties over the scheme. Mr Hariri and his hand-picked team at Solidere are identified with the project to such a degree that many doubt whether the country's rehabilitation could survive his departure - in a land where the tenure of political leaders has been as precarious as anywhere in the world. Similar fears revolve around the future of Syria. Mr Hariri recently called Syrian President Hafez al-Assad the "unknown sol-dier" of the reconstruction project. Few believe Lebanon, G and its economy, could eurvive a turbulent succession in

Damascus unscathed. Neither Mr Hariri nor Solidere can afford to be troubled by such concerns. Instead, they are hurrying to complete the basic infrastructure within the next two and a half years. "We will have the critical mass of central Beirut in place in five to seven years," says Mr Sal-

It will be a long time before anyone can tell whether Beirut can revive itself as a financial capital and become "the ancient city of the future" of Solidere's slogan.

There are some hopeful indicators. In the last two years, Gulf Arabs are believed to have pumped \$1bn into the city's real estate market and some 40,000 Lebanese expatriates have returned. Buying by Gulf Arabs has also pushed Solidere's share price from its issue price in June of \$100 to

nearly \$170.

The only certainty for the next couple of years is that Beirut is becoming the biggest building site in the Middle East, but Mr Hariri's supporters argue that there is no bet-ter alternative. "None of our critics have come up with al. project for rebuilding the centre which is different from ours," says Mr Chammaa.

# Right to livelihood, not 'pristine poverty'

From Mr Patrick McCully. Sir, The World Bank's Tim Cullen ("Sieepless and irritable in euburbia". October 10) mocks the position of those who seek to halt the World Bank's support of socially and environmentally destructive projects, in particular large dams. "This group", claims Cullen, "would like the bank to steer clear of any activities that challenge the right of people to live in pristine poverty...". Presumably Cullen counts among the members of "this group" International Rivers Network - author of the recently released Manibeli Declaration. This calls for a moratorium on World Bank-funding of large dams pending a com-prehensive review of the costs

and benefits of its past dam projects - and the more than 2,000 organisations from 44 countries who have endorsed the declaration.

Cullen arrogantly dismisses the misery caused by the Bank's large dam programme, saying merely that people "may have to be resettled". In reality, about 10m people have been directly displaced by World Bank-supported dams over the past 50 years. More enlightened employees of the Bank admit that dam displacement takes part on a massive scale and tears apart poor, but often self-sufficient, communities, robbing them of their land and jobs, and increasing rates of malnourishment, sickness

At stake is not people'e right | most cases failed to support to live in "pristine poverty", but their right not to have their cultures, self-respect and livelihoods destroyed. Large infrastructure projects, says Cullen, merely "have the potential to cause environmen-

tal damage": in the real world, Bank-funded dame have destroyed hundreds of rivers, wiped out riverine and coastal fisheries, and drowned huge areas of fertile farmland and diverse forests.

If the World Bank were, as Cullen claims, really concerned about the well-being of the billions of people without access to electricity or clean water, it would not be promoting uneconomic and technically flawed | 1847 Berkeley Way, dam projects which have in | Berkeley, California 94703, US

rural water supply or electrification programmes. The World Bank's own "self-critical reports" which Cullen boasts of (and which the Bank invariably ignores) show that its large irrigation projects have been stunningly inefficient, and have had serious environmental side effects. A 1991 World Bank study revealed that in almost half of the irrigation projects surveyed, crop production had actually fallen after project construction. Patrick McCully.

## How loan pricing is set

From Mr Paul J L Rec.
Sir, I could not disagree more strongly with Dominique de la Barre d'Erquelinnes' let-ter (October 5) which propounds one of the central errors committed by many lending banks. Even a cursory reading of the comments on the syndicated loans market in Monday's FT gives a clear picture of how loan pricing is

actually being set at present. The banking industry has been characterised by extreme overcapacity for much of the past two decades. As in any other industry, this inevitably pushes down prices, and many decisions to lend at low rates have been rationalised by an over-optimistic view of the general provisioning costs which must be covered by the loan margin. Since actual loan losses are highly sensitive to the economic cycle, inadequate pricing is often masked in the early years of development of Fairplace Consulting. loan portfolios until heavier, 36-38 Combill,

and enter a new one, only to repeat the same mistake in a different setting creating a "cascade" of problem loans. A more rational decision would have been, as Ms de la

Barre suggests, to refuse to lend, but this would have involved many lending officers and their line managers putting themselves out of work. Annual provisioning charges linked to the riskiness of the underlying transactions will not solve the problem of overcapacity. However, they will force bank managements to confront the explicit cost of pursuing a given lending strat-egy and make it clear that much lending business is lossmaking over the course of the

# Not economic sophistry, required. Once the pricing inadequacy is exposed, many banks exit one lending sector From Mr Stephen Butler.

Sir, Stephen Beer (Letters, October 8) perpetuates a common misconception about the supposed impracticality of "simple economic theory" by confusing two aspects of mar-ket behaviour. All market actors who seek returns want to be correct in their forecasts, not just those concerned for their political reputations.

Such motivations are not only no guarantee of good judgment (witnese former chancellor Norman Lamont's hapless performance on Black Wednesday), but are in fact irrelevant in considering markets' real utility as the best available collectors, processors, and disseminators of informa-

Mr Beer's "casual observation" that "most market participants can be wrong some of the time" in fact demonstrates this virtue.

No single person or group will likely be right about the future, or even about very much of the present However, in generating prices out of countless individual calculations, markets co-ordinate the limited bits of information that participants actually do have and far more regularly and capably than any central institution.

This is not sophistry, but historically verifiable reality. Yes, financial markets are full of small traders who Combridge CB5 &BL

blindly follow trends, which may themselves be based on unreasonable or unfounded expectations. Yes, they are prone to panics and the occa-sional disproportionate influence of a George Soros, and sometimes require correction. They are indeed imperfect and an inappropriate object of anyone's "faith".

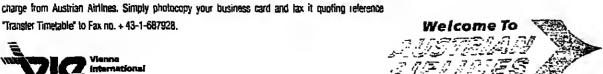

Nonetheless, their collective best guesses about future developments such as inflation are based on far more information than could ever fit into a brief on Bank of England governor Eddie George's desk.

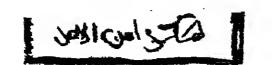

Distortions in markets are exceptional by definition, and they correct themselves as new or hitherto under-appreciated information comes to light. In central banks however, under the guise of "correction", distortion is the name of the game.

Casual observation suggests to me that such intervention is very rarely successful or beneficial - an odd foundation for such important and expensive

institutions. Practical experience has exposed the folly of attempting to direct goods and services centrally.

Why are we still willing to countenance similar discretionary power regarding bonds and currencies? Stephen Butler

that

abel

The loyalists, like the mainstream Ulster Unionists but so far unlike the Rev Ian Paisley's Demo-cratic Unionists, have apparently decided that "the union is safe" in Mr Major's hands. They believe the IRA's cessation of violence since August 31 (except as a brutal method of policing its own urban strongholds) is an admission of defeat. They do not believe, as Mr Paisley does and as Sinn Féin claims to, that the IRA ceased fire only because Britain has lost interest in Northern Ireland and is looking for a way out. Mr Major's promise of a referendum on any new arrangement has reassured them, as it has unionist opinion generally. That pledge gives the majority in the province a veto which was not granted to it when Mr Major's predecessor negotiated the 1985 Angio-Irish agreement.

Opposite expectations

So Northern Ireland begins this week free from the immediate fear of terrorism, for the first time in 25 years. That is a blessed relief, for which Mr Major certainly deserves his share of credit, along with his Irish opposite number, Albert Reynolds, and the leader of the main nationalist party in Northern Ireland, John Hume.

But to call this ceasefire "peace" would be premature because it is based on opposite expectations. Loyalists believe the United Kingdom is safe; republicans that they are on the way to a united Ireland. At least one of those expectations is going to be disappointed; the British and Irish governments may even, as they try to square the circle, convince both sides that they have been betrayed.

That is the fear. The hope must be that peace will find its own momentum; that on neither side will paramilitary leaders wish to That depends in part on those

John Major's political skills seen as "men of peace" rather than "men of violence". The effort managing the internal politics of to include them in negotiations is than "men of violence". The effort to include them in negotiations is therefore justified. But no one should lose sight of the fact that in electoral terms these are fringe parties. They may have the ability to wreck a settlement. They do not have a mandate to negotiate one.

Crucial breakthrough

Much has been made of the parallels between the "peace process" in Northern Ireland and those in South Africa and the Middle East. In so far as such parallels have any value, they suggest that the crucial breakthrough must be achieved by establishing a new relationship of trust and mutual understanding between the leaders of mainstream, representative parties in two hitherto bitterly polarised communities. That was achieved in South Africa between FW de Klerk and Nelson Mandela: the relationship reached a point where their respective communities' confidence in them depended on their ability to continue co-operating with each other and to demonstrate progress, and both understood that. Between Yassir Arafat and Yltzhak Rabin the same is objectively true, but the process is in difficulties because neither seems to be confident that the other has understood it.

Between John Hume and James Molyneaux, who would be the analogous figures in Northern Ireland, the process has not really started. The job of creating such a relationship has been left to the British and Irish prime ministers. The latter certainly need to be involved, because nationalists in Northern Ireland would not have confidence in a purely internal settlement. But in the last resort trust has to be built between the two communities, and the leaders of the mainstream, representative political parties on both sides

have a crucial part to play. Up to now Mr Hume has devoted his main energies to building an alliance of nationalist parties committed to constitu tional methods; and Mr Moly neaux has been mainly concerned to keep the British government committed to maintaining the union, Both have succeeded, and Now they need to concentrate on leaders themselves gaining psy-chological benefits from being other.

# Snail's pace at Japan's MoF

two decades that the rigid compartmentalisation of the Japanese banking system is based on functional divisions that no longer correspond with market reality. Yet the deregulation of the system has been a peculiarly tortured exercise in gradualism, as last week's events demonstrated once again.

The decision by the Ministry of Finance (MoF) to sanction the plans of five city banks to set up securities subsidiaries is an important step. Yet it amounts to no more than a partial retreat from the restrictions of Article 65 of the Japanese Securities and Exchange Act - the equivalent of the US Glass-Steagall Act, which prevents banks from conducting securities business. While the city banks will now be permitted to underwrite corporate bond issues, their desire to compete in the wider securities area has been frustrated by the lobbying of the securities firms, whose profits have suffered in the aftermath of the bubble economy, and by the conservatism

of the Mor's own officials. That is not to say that limited concessions are worthless. In a world where corporations increas-ingly cut out the banking middleman and go direct to the markets for funds, an entree into the bond markets will be welcome to the city banks, just as it has already been welcomed by the long-term credit banks. But if regulation is to be aligned with market logic in bonds, why not in equities too?

Motor for change

Of the main forces for financial deregulation in Japan, bad debts are proving a far more potent motor for change than external pressure from the US and elsewhere. Last week, no doubt with a nudge from the MoF, Mitsubishi Bank paid Y200bn (£1.3hn) for a controlling stake in Nippon Trust, the troubled trust bank that is expected to record the first posttax loss in Japanese banking history in its current financial year. Mitsubishi has, in compensation, been granted a mandate to explore all those trust bank activities which another recent set of semiliberalising measures from the MoF has kept off-limits for the city banks as a group. In particular, Mitsubishi will have access to potentially lucrative pension fund international trade.

be a source of envy to its peers. There are plenty of precedents for such a regulatory trade-off. In the US in the 1980s inter-state regulatory boundaries and functional dividing lines between banks and savings and loans were dropped on an ad hoc basis to divert the cost of socialising bank losses away from the federal budget. And in Japan last year Daiwa Bank was given carte blanche to conduct the full range of securities activities in exchange for rescuing the medium-sized broking firm Cosmo Securities.

Deficiency of assets

If there is a difference in the approach on either side of the Pacific, it is simply that the scale of the down payments on a regulatory exeat in Japan looks excep tionally large. For Mitsubishi Bank Y200bn is not enough to make a significant dent in its capital ratios, but it is still a high price to pay for a trust bank that has a sizeable deficiency of assets against liabilities.

Also striking is that liberalisation has not, in Japan, been syn-onymous with profit. Those foreigners who obtained seats on the Tokyo Stock Exchange just in time for the collapse of the Japanese stock market know that the experience can be as expensive as it is liberating. And despite the enormous freedom that Daiwa Bank now enjoys across the financial services markets, it has yet to translate it into a notably superior

performance Given the extent of the bad debt problem in Japaness banking. there will probably be further cases where the MoF is prepared to drop its regulatory guard in the interests of stabilising the system more cheaply. Yet the overall pace of deregulation looks set to remain turgid. That will be a profound relief to the less efficient players in the system. The same applies to bankers in more flexibly regulated financial centres in other countries, since a disproportionate amount of Japanese financial business will continue to be diverted off-shore. It is a remarkable feature of this otherwise profoundly competitive nation that it should offer such generosity to its rivals in an important area of Taiwan/South Korea: in the fast lane

Increasing regional competition is forcing he seemingly unstoppa-ble rise of east Asia's "tiger" economies is one of the industrial mira-Taiwan and South Korea to run faster to cles of the late 20th censtay ahead, says Guy de Jonquières tury. Admired, envied and sometimes feared, their vigorous export-led growth is often held up as a model for poorer economies -

# The tigers face a challenge

taken the US to become Korea's biggest export markst. Despite Taiwan's ban on direct transport links with China, its exports to the mainland are expected this year to match those to the US.

But both countries are keenly aware that, to stay ahead of regional rivals, they need to raise their performance closer to levels in the industrialised world by shifting into activities with higher margins and value-added.

Each brings to that task contrasting competitive strengths, reflecting distinctive industrial structures evolved over the past 30 years.

Taiwan's economy is built on the spirited entrepreneurship of swarms of small manufacturing businesses, which account for most of its exports. Niche producers par excellence, they have prospered in sectors ruled by fashion or rapid technical change and have made Taiwan the world's largest exporter of bicycles and printed circuit boards for personal computers.

If Taiwanese are east Asia's skilled artisans, Koreans are its forgemasters. The sprawling chaebol, or family-controlled conglomerates that dominate the Korean economy, have long sought advantage in large-scale heavy industry, gambling ever larger investments in giant mass-production facilities.

encouraged and underwritten by government support - has made Korea the world's biggest shipbuilder and its sixth largest producer of steel and cars. In all these sectors, further ambitious expansion is planned.

Despite these differences, the two countries share some important weaknesses. Both depend heavily on imported technology and components, above all from Japan, with which they run large trade deficits. These amounted last year to 6.5 per cent of Taiwan's gross national product and 3.5 per cent of Korea's.

Though Korean semiconductor makers have recently gained world market share in D-Ram memory chips, their achievement owes less to trail-blazing technology than to continued heavy investment in production capacity at a time when recession-bound Japanese producers were cutting back.

tional manufacturing industries are concentrated, have been hit hard. Much of exploit. South-east Asia has over-Taiwan's output is still sub-contract distribute the products under their own names. Some Korean groups, such as Hyundai and Samsung, are trying to establish their brands overseas. But despite increased attention to quality, their products have yet to overcome a nondescript image as second-best alternatives to

Japanese goods. As a consequence, the two countries' exports still sell heavily on price, leaving them highly sensitive to exchange rate movements. In Korea's case, the problem is com-pounded by the fact that many of its exports are in sectors where Japan is the acknowledged quality and technology leader.

Similar doubts were, of course, expressed about Japan's prospects as recently as 15 years ago, How-ever, there are important differences. Western manufacturers, which once provided soft targets for Japanese exporters, have grown

Protection has exacted a price by encouraging excess capacity and slowing industrial rationalisation

tougher, as global competition has forced them to restructure, improve quality and innovate faster. Japan also controls access to its

most sensitive industrial know-how more strictly than did the western countries whose technology it borrowed freely early in its development. Even though Korea's Sam-sung recently developed the world's first 256MB D-Ram, it must still rely on Japanese equipment to make the

Faced with these obstacles, Korcan and Taiwanese businessmen no longer talk as though emulating Japan's industrial ascendancy were just a matter of time. They increasingly accept that their economies can aspire to match its achieve-ments only in selected areas. Some Korean exporters are also

placing less emphasis on the US and western Europe, after losing market share there. They aim instead to concentrate in the next few years on less demanding third world markets. Many are also eyeing keenly the potential of North Korea's market, in the belief that the two countries may soon be uni-

Longer term, the two tigers are pinning hopes to government-backed pushes in high-technology. Both countries are stepping up spending on research and dsvelop ment, investing in science parks and have ambitious plans to develop aerospace and biotechnology industries.

Their most valuable assets are skilled labour forces and sizeable pools of western-educated engineers and scientists, many of whom they are now seeking to entice back home from jobs abroad. "Engineers here are good but cost less than in Japan, so we can afford a bigger effort," says Mr Winston Wang, head of Nan-Yang Plastics, one of Taiwan's largest manufacturers.

The catch, however, is that other countries can play the same game, "China has 20 or 30 times more engineers than Korea or Taiwan, and they are even cheaper," says one western businessman. Taiwan also wants to develop its

service sector and attract foreign capital and technology by becoming a centre for the regional operations of multinational companies. But it faces daunting handicaps. As well as its diplomatic isolation and lack of direct links with China, Taiwan has poor infrastructure, countless barriers to foreign investment and opaque rules of business conduct. Both tigers have surprised the

world before by achieving apparently impossible feats. But while their efforts in the past have been geared to storming other countries markets, the challenge today is increasingly to tackle structural weaknesses in their own.

Historically, the tigers' overriding priorities have been to replace imports with home-produced goods and promote export-led growth. They have targeted "strategic" industries and sheltered their home markets with extensive non-tariff

Such protection has exacted a price by encouraging excess capacity and slowing industrial rationalisation. Korea, which imported 1,300 cars last year, has four - possibly soon to be five - volume producers, while in Taiwan 11 car assemblers

serve only 20m people. Financial markets, meanwhile, have been constrained by tight exchange controls. Policies which directed credit to "strategic" sectors on preferential terms have turned many commercial banks into extensions of industrial policy.

In short, policies that have helped make the two countries champion

exporters have insulated their economies from global market forces and stunted domestic demand. Lacking strong pressure from con-sumers at home to innovate and develop sophisticated marketing skills, their industries have followed, rather than led, interna-

tional market trends.
Gradually, though, the old order is starting to crumble. In both countries, authoritarian military regimes were replaced by democratic gov-ernments in recent years. This has loosened governments' grip on industrial policy and encouraged lobbies to press for economic and financial reform.

The search for a bigger world role is also increasing pressures for change. Korea's impending application for membership of the Organisation for Economic Co-operation and Development, the club for the world's leading economies, will expose its restrictions on capital flows to critical scrutiny. Taiwan's bid to join the General Agreement on Tariffs and Trade as an industri-alised economy this year will require it to adopt a more liberal

trade policy. But although both governments say they are committed to liberalisation, progress to date has proven halting and haphazard. The political drive from on high faces formidable obstruction from bureaucrats below, who fear deregulation will erode their power.

n Taiwan, democracy is also blamed for slowing reform efforts, "Democracy makes the economy more transpar-ent and fair, but less efficient," says Mr Vincent Siew, chatrman of the government's Council for Economic Planning. "In the days of martial law, we just did what was right for the country. It is much harder to push through decisions now."

Such interventionism has traditionally been even more pronounced in Korea, where the government seems even more reluctant to accept that genuine liberalisation would restrict its scope in the economy.

Ministers' continuing inclination to meddle is exemplified by their strenuous behind-the-scenes efforts to prevent Samsung from starting car production and Hyundai from competing in steel on the grounds that they would undermine the profitability of existing producers.

Ministers and officials think they have to plan liberalisation in every detail," says Dr Jwa of the Korea Development Institute, who acts as an adviser to the finance ministry. "They have no clear concent of what a free market means." All the evidence suggests that entrenching market-based reforms in Korea and Taiwan will take time. Perhaps the biggest barrier of all is the self-confidence bred by the giant economic strides they have made in

the past 30 years. As Dr Young Soogil, an eminent Korean economist puts it: "We think we are changing very rapidly because we only compare ourselves to our own past. What people don't realise is that the rest of the world is changing just as quickly, and we are in danger of being left out."

# **OBSERVER**

## Vision of an empty chair

The Millennium Commission has made a decision. The body entrusted with dispensing £1.5bn to mark the new era may be lamentably ill-equipped to explain how it plans to spot things millennialistic. What it can say is that the man picked less than two months ago as its chief executive Nicholas Hinton from Save the Children Fund - is unsuitable for the job. And he was only meant to start today.

One can imagine what happened. The nine commissioners, a geographically representative but not especially eminent band of worthies, have been travelling the country together soliciting ideas and bolstering their own sense of importance as the vastness of their financial power sinks in. Along comes Hinton, a man accustomed to throwing his weight around after nearly a decade building Save tha Children. He threatens to have an opinion or two, so is sent packing as summarily as an unsuccessful supplicant for an Arts Council

Back to the drawing board, then, with the advertisement for a boss who, first time around, was supposed to possess "presence, authority and ingenuity". Obviously a misprint for a

masquerading as a yes-man.

Meanwhile, the commissioners
might care to consider that, while they understandably wish to wallow in the glory of picking the dozen or so really big projects, the bulk of the funds is destined for a multiplicity of rather less glamorous, but in the end much more significant, endeavours. When it is time to choose those, that may be the moment when the bigwigs regret letting Hinton go.

Down and out

■ Calling all those with next June's G7 summit pencilled in to the diary. Book now to avoid disappointment The powers-that-be have just twigged that the picturesque but sleepy city of Halifax, Nova Scotia (population 300,000) cannot possibly accommodate those thousands of officials, journalists and assorted hangers-on who grace these lavish

Having jettisoned the notion of using vacationing students' empty dies to house the overflow. members of the Canadian organising committee are now hastily calling up the big cruise lines. Any chance of piloting a luxury vessel or two from the Med or the Caribbean up into Halifax's

notoriously polluted - harbour? Well, not much, actually. The reaction to date has been remarkably cool. Either the budget even for a G7 jolly will not stretch . or else the cruise operators can

Commence of the commence of th

think of better ways to market themselves than filling their cabins with squabbling bureaucrats.

One step forward

■ Absent from the massed military forces guarding the return of Jean-Bertrand Aristide to Haiti's capital Port-an-Prince over the weekend were the fifty soldiers President Lech Walesa so readily promised Bill Clinton last month. But not for want of trying. The first hurdle was a reluctant

domestic cabinet, miffed at Walesa's freelance activities, and initially unwilling to produce funds for tropical uniforms and medical jabs. But the defence ministry has finally stumped up and the troops are kitted out and awaiting an American aircraft. Only trouble is, they have now mustered so much equipment that a single machine may be insufficient. The US State Department counters that it is "between financial years" and hence not in a position to fund additional transport. Oh, the trials of a country on the long march to NATO membership.

Not at liberté? Having endured months

watching vest quantities of red ink haemorrhaging from the state-run French bank, staff at Crédit Lyonnais apparently reckon the worst is now over. That, at least is the promising sounding finding of an internal opinion poll, assiduously leaked to a number of French newspapers last week. But then, just how believable is a survey in which it also emerges that 89 per cent of staff purport to be "very" or "fairly" satisfied with the level of interest in their jobs?

Rank outsiders

■ The rich are not like you and me especially when they live in Switzerland. Nearly half of the country's 50 richest residents are not Swiss nationals, according to the latest rankings in Swiss business magazine Bilanz. Among

the 25 Swiss franc multibillionaires, all but seven are foreign, including Otto Beisheim of the German Metro retail group, Octav Botnar, the fugitive British car dealer, and Johann Rupert, of the Rothmans tobacco and Vendome luxury goods busine

Notably absent from this year's list, however, are the Brenninkmeijers behind the C&A clothing store chain. The reclusive family complained last year that, while its wealth might be considerable, and many members of the clan might live in Switzerland, no single family member possess a particularly large chunk of the fortune. Bilanz still believes that the Brenninkmeijers are wealthier than the officially designated number ones, Vera Oeri-Hoffmann and Lukas Hoffmann, inheritors of the Hoffmann-La Roche drugs group, who weigh in at some SFr10bn each.

Revelations appear on eve of Queen's visit to Russia

# Book on prince raises fears for UK monarchy

Senior UK government ministers yesterday tried to quell public auxiety about the future of the British monarchy after newspaper publication of extracts from a controversial book about the private life of the Prince of Wales.

The book, written by Mr Jona-than Dimbleby, a well-known broadcaster, contains a detailed account of the difficulties of Prince Charles's marriage to Lady Diana Spencer.

The extracts appeared on the eve of Queen Elizabeth's state visit to Russia, the first by a reigning British monarch.

Mr Douglas Hurd, the foreign secretary, said recent revelations in books and newspapers about the royal family had led to the monarchy's detractors "getting everything out of proportion". He said: "I don't believe all this nonsense about a republic knocking on the door ur the House of Windsor being besieged like the

## Merck tests money-back prostate drug offer

Merck, the higgest drugs company in the US, is offering satisfaction to users of its pros-tate drug Proscar, or a refund on the cost of the drug.

The drug is designed to treat the enlargement of the prostate gland, a condition commonly seen in men over the age of 50. The enlargement causes difficulty in urinating and can in extreme cases lead to kidney failure. Surgery is the treatment of

last resort.
In the scheme it is testing,
Merck will refund the \$275-plus cost of a course of Proscar if the drug fails to improve the patient's condition after six months. Money will also be refunded if the patient needs surgery within two years.

The scheme has so far proved

popular, having been taken up by 30 Veterans Administration hospitals and 11 health management organisations companies which specialise in buying healthcare services from hospitals and

doctors.

Merck will not reveal what the refund rate has been, but clinical trials have suggested that 80 per cent of men respond favourably to the drug. The improvement is usually apparent within two weeks of starting the course of treatment.

The company concedes, nevertheless, that Proscar, which was launched in 1992, had a difficult start, with sales growth slower than expected, it was a new approach to treating enlarged prostates "and doctors are conservative", Merck said.

Mr Vincent Lawson, managing director of the company's UK operation, Merck Sharp and Dohme, said the money-back promotion was "a real sharing of risk with real effects if promises are not kept". He acknowledged that the pros-

pect of money back guarantees might be "terrifying" for some in the drugs industry. Merck said it could be some

time before a similar scheme was introduced outside the US. The US healthcare industry is largely privately owned and fragmented. with individual bospitals able to

The UK-based Glaxo, Europe's biggest drug company, said lt was not using such techniques to sell its drugs.

# THE LEX COLUMN Back to German

Any sighs of relief in German bond and equity markets at Chancellor Kohl's close rum victory last night are likely to prove short-lived; the markets rose strongly last week in anticipation of a coalition victory and investors will soon he turning their attention back to fundamentals.

Here, nothing has changed. The German equity market is propped up by expectations of a near-doubling of corporate earnings this year and further substantial profits growth in 1995 and thereafter, but still looks expensive by historical standards. It is yielding 2.5 per ceot for this year, which does not look attractive in comparison with yields of just under 7.5 per cent on German government bonds.

The outlook for bonds could have changed significantly for the worse had a high-spending, left-leaning coalition taken power. With Kohl re-elected, the government is likely to press ahead with further fiscal tightening but this alone will not persuade the Bundesbank to cut sbort-term interest rates further. Prudent fiscal policy, in any case, will be no easier to achieve, given the the coalition's thin majority in the Bundestag, and its

weakened position in the upper house. In the meantime, the focus will be on the usual factors which determine inflation over the mid-term: the rate of growth in the German economy, the money supply, and the outlook for next year's wage round, in all three cases the Bundesbank bas plenty to worry about, despite the fall in headline inflation towards 2 per cent. It will will want to see, at the very least, September's data on money supply and industrial production before revising its position on interest rates.

## British Steel

Recovery in the steel industry is in full swing. One sign of this is British Steel's decision last week to commit nearly £100m to building a mini-mill in the US, its biggest investment in the past four years. The group has also successfully pushed through six successive price increases since the beginning of last year. Steel prices may still be significantly below the peak they reached in late 1989, but so great is the operational gearing within the trimmed-down industry that British Steel's profits over the next few years are likely to grow rapidly. Analysts calculate that pre-tax profits, which amounted to £80m in the year to March, may rise to more than £1hn hy 1998. The dividend could quadruple

over the same period.

In common with other cyclical stocks, the group's sbare price has risen well in advance of earnings, more than trebling since its low point in 1992. On previous form, it will also turn down again long before earnings reach their next peak. The question for investors is when to sell.

At present, the shares trade at about five times expected 1998 earnings. This is more expensive, relative to the mar-ket, than their peak rating during the last cycle. Arguably, the higher valuation would be in order if the European steel industry had sorted out its grievous problems. But the capacity cuts pledged by manufacturers may be shelved until the next downturn. This suggests that British Steel's shares are near the limits of their outperformance, even if the group is set to report buoyant profits for years to come.

## US economy

The overwhelming impression from last week's range of US statistics is of an economy still expanding fairly strongly despite the good headline news on inflation. Industrial production was flat in September, but that followed a sharp gain in August, Cap-acity use dipped slightly hut from a figure that had been revised upwards. At 84.6 per cent it displays little sign of slack. Last but not least, retail sales still look strong, with Friday's Michigan consumer sentiment survey showing improved confidence. None of that offers grounds for a reprieve from a further interest rate rise.

Indeed, the Federal Reserve may have to remain in tightening mode for some time, whatever happens over the next few weeks. Like the producer price data on Thursday, the retail price figures on Friday benefited from

a sharp fall in energy prices. The difference was that the underlying rise, excluding food and energy, was slight. ly more muted than expected. But there is no guarantee that inflation will remain so easily contained, especially given the underlying upward pressure on producer prices for intermediate goods and raw materials.

To that problem has suddenly been added dollar weakness. The immediate cause of Friday's sharp fall was demand for D-marks ahead of yesterday's German election. But the slippage against the yen is also a reminder of how strongly underlying world capital flow work against the US currency. If dollar weakness spills over into Treasury bonds, the Fed may even have to contemplate a rate increase sooner rather than later.

## Chemical industry.

ICI's shares endured a torrid end to last week, falling nearly 3 per cent in two days. That was the culmination of an 8.6 per cent decline since the start of August. Its performance, and that of other European commodity chemicals stocks, is bizarre because of the global sbortage of ethylene, the basic build-ing block for plastics.

In the US, demand has beeu so strong that production problems at

two plants have caused physical shortages. Spot ethylene prices, which at the start of the year were as low as 13 cents a pound, have recently reached 48 cents. Wall Street has taken this on board; chemicals have been the best performing sector in the US market over the last 12 months. Dow's shares have outperformed by 20 per cent, Geon's by 42 per cent, and Union Car-hide's by 54 per cent. Prices may pause momentarily as capacity comes back on stream and a few new plants start up, but the market looks set to remain tight for at least two years.

For European chemicals companies any pause in US prices is an irrele-vance because of the low volumes of American chemical exports. Strong demand bas helped European ethylen prices climb 23 per cent in the last two quarters. Such price rises and volume growth should help generate a humper third quarter. Yet apart from the Netherlands' DSM, European stocks heavily involved in petrochemicals have failed fully to emulate their US counterparts. BASF has outperformed the market by just 8 per cent in the last 12 months, ICI by only 13 per cent. It is time for a rerating of European commodity chemicals stocks.

tax-exempt revenue honds. Yet if public ownership makes sense for Lilco, some argue, why not nationalise all the other pri-

vate-sector utilities? Or for that matter, the rest of US industry? Mr James McFadden, a utilitles analyst at the securities house Bear Stearns, says: "The question is whether you want more utilities owned by the government sector or not. Most in this country would say you want smaller government, and this runs at

cross-purposes with that." On Friday Llico said it was "seriously evaluating" the proposal; but its shares were trading only \$1% up at \$17%, far short of the \$21.50 a share proposed by New York State. At that price, the market is betting either that the Federal government will intervene to block the bid - or that Mr Cuomo will not be reelected to pursue it.

# Hammerson clinches Australian deal

By Peggy Hollinger

Hammerson, the UK property group, yesterday clinched the sale of its Australian property interests for £251m (\$396m) in cash, after a heated bidding race between five companies helped to push the price to e 40 per cent premium on recent valuations. The UK company, with an international portfolio valued at about £1.7bn, is now expected to launch an aggressive acquisition programme in continental

Europe, particularly France. Hammerson has conditionally agreed to sell six office buildings and one shopping centre to Australian Mutual Provident Society. The properties were revalued last year at £178.3m. down from £211m in 1992.

Mr Ron Spinney, who led a wide-ranging reorganisation since arriving as chief executive last year, said hidding had been fierce for the Australian proper-ties, which include one of the largest regional shopping centres

"There has been a considerable improvement in conditions in Australia over the last six

The properties last year con-tributed income of A\$27m. Mr Spinney said that Hammerson decided to sell when it became apparent they would require fur-ther investment.

Hammerson intends to use the proceeds over the next 15 months to increase its exposure to retail developments. The company will

also seek to bolster its portfolios in the UK and continental

Europe. Hammerson is in advanced talks on potential property deals in France. Mr Spinney said that the group would seek opportuni-ties in Germany in due course. Both countries were "If not at the bottom of the economic cycle, close to it".

Yesterday's deal was expected to enhance Hammerson'e earnings per share. Even leaving the cash on deposit would add 1.9p to

earnings, Mr Spinney said. The company's gearing - debt as e percentage of shareholders' funds - would initially fall from 63 per cent to 36 per cent as a result of

the deal. Last year the group raised £199m through a seven-for-15 rights issue at 285p to bolster a

weak balance sheet. Mr Spinney said just two significant properties remained to be sold. These were North American office blocks valued at more

company in the hope of raising finance which they say never materialised have joined forces to press the US and UK anthorities for compensation.

The issue will put further pressure a British in learning to have a say to be a say to b Chemical Banking chairman Walter Shipley explains why asset quality is paramount

sure on Britain to increase regulation of off-shore havens. The FBI has intensified its 18month investigation of the US company, Bond Street Commer-cial. Law enforcement officers estimate up to \$100m has been taken in "retainers" by the com-

pany world-wide, or those con-nected with it, in return for help in raising finance. Almost 20 UK companies have formed the Turnberry/Bond

Street Pressure Group to high-light their plight. The companies each paid retainers of between \$30,000 and \$230,000 to Miami-based Bond Street Commercial, previously known as Turnberry Underwriters. In return, they were promised help to raise almost \$100m, in the form of collateral to secure bank loans.

In many cases, the loan was to have been repaid by a flotation arranged through a company run by the former president of Turn-berry, Mr Les Mersky.

Yet no company could meet the terms of the Bond Street contract in the time allowed, Several companies even paid further retainers for extensions but still could not complete.

The arrangement appears to have broken down during bank to bank discussions. In one case, Turnberry's bank was discovered to be an offshore private institution, the Guardian Bank and Trust (Cayman) Ltd.

Mr Gwyn Davies, of Cardiffbased solicitors Edward Lewis Bevan Ashford representing the group, said they wanted "to ties' failure to regulate Turnberry/Bond Street in the UK, US and Caymans."

Turnberry and the Guardian Bank were the focus of an article in the Financial Times last year. Other UK companies have been put in touch with Bond Street through national newspaper advertisements. The ads are often placed by US

and UK agents. One such agent, based in New York and trading under the name EFG or EF Gibson, was involved in most of the John Gapper | pressure group cases.

Monday October 17 1994

# Rationalise and keep risks to a minimum

ley does not impose himself, being quiet, courteous and unassuming. His bank also has a low profile for its size. With \$166bn of assets, Chemical Banking is the fourth largest bank holding company in the US, but is still known primarily for the two banks that formed it.

Yet 21/2 years after the merger of Manufacturers Hanover and Chemical Bank - two ailing money centre banks whose head quarters faced each other across Park Avenue - it has started to gain a reputation as more than a product of a marriage forced by mutual weakness in hard times. Mr Shipley also appears to be

enjoying his new-found prominence since taking over as chair-man and chief executive this year on the retirement of Mr John McGillicuddy. Mr Shipley, the former chairman of Chemical Bank, agreed to serve under Mr McGillicuddy as part of the

His statement, in a recent interview with the Financial Times that he was prepared for Chemical to lose its dominance of the US syndicated loan market rather than accept loose terms and conditions on loans, was part of a determination not to squander Chemical Banking's newfound strength.

The most obvious symbol of that is the restoration of its tier one ratio of core capital to riskweighted assets to more than double the 4 per cent Basle accord minimum. This contributed to Moody's, the credit rating agency, raising its long-term rating to A2 from A3 this April. Mr Shipley is most impas-

or a man of 6ft 8in (2.06 sioned when talking of how cru-metres), Mr Walter Ship-ley does not improve the cial it is for the bank to maintain and improve its rating. Companies are now willing to accept it as a partner in long-term con-tracts such as interest rate swaps. "There is no single thing I can do that is more important than being the champion of asset quality. Everything else we do can be overwhelmed by poor assets," he says.

Mr Shipley says, moreover, that day-to-day management is affected by whether the bank is perceived as strong or weak. "We went through a period where we

We can switch to the offensive and chart a course and keep to it'

were on the defensive, and exter-nal events determined our daily and strategic thinking. We have emerged into a period where we can switch to the offensive and chart a course and keep to it. The successors is the power of that."
Getting bigger without taking true account of the risks lay behind the problems of both Chemical and Manufacturers Hanover. The banks were in turn

US, and had to sell assets to restore capital. So perhaps it is unsurprising that Mr Shipley does not see the new Chemical - as it is known internally - reasserting itself through aggressive growth.

assailed by the less-developed-

country debt crisis and real

estate lending problems in the

New York, New Jersey and Con-necticut, and in Texas through its Texas Commerce Bank. Like other US banks faced with the prospect of narrowing net

interest margins, Chemical has embarked on rationalisation. Mr Shipley points out that its reduction from 430 branches to 280 in the New York area has left it with deposits of \$35m per branch, compared with an industry average of \$30m. "We have been kept busy getting the merger done. but chapter two is a tough view, business by business," he says. "It is rationalise, rationalise, rationalise. Traditional ways of banking are becoming more and more obsolete as technology brings new ways to deliver prod-

threaten its position in one of the

few markets it truly dominates. He sees "chapter two" of the

merger as being primarily devoted to cost-cutting rather

than generation of more income.

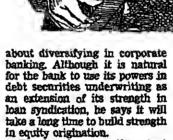

This is particularly so in its retail

and mid-market operations in

Mr Shipley professes no great appetite for taking part in the current phase of consolidation of US banking in which small banks are being bought to fill in the networks of larger regional banks. Smaller banks are now commanding prices of about 2% times book value.

Chemical has concentrated instead on building its product range in retail banking. This means a stronger focus on credit cards, and the \$330m acquisition in May of Margaretten Financial, a New Jersey-based residential mortgage lender.

Mr Shipley is also cautious

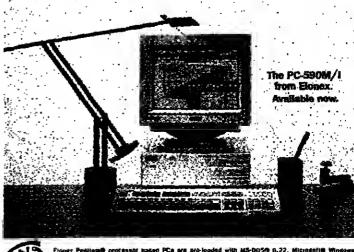

in equity origination.

The jury is out on the extent to which commercial banks can truly become a major factor on their own in equities," he says. He cites the efforts of J.P. Morgan. "Morgan has a clear head start on everyone else, but they too have got a long, long way to go," he says. He sees Chemical'e task in the medium term as a less clear-cut one than Morgan's attempt to bridge the divide of the Glass-Steagall Act separating commercial and investment banking in the US. "By definition, we do not have a singular reputation because we have a diverse base," he says. Instead, Mr Shipley wants to

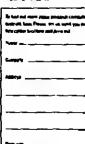

push through operating improvements, shifting capital into its ally trying to push its return on equity up from last year's 16.6 per cent during a good trading year to a 16 per cent minimum in bad years for financial markets.

This is not a particularly glam-orous mission, but Mr Shipley believes it is the only choice without taking excessive risk. In the long term, he does not rule out a merger with another large bank. But the medium term promises a continuing struggle to reinforce Chemical's new name.

This week: Company news

EUROTUNNEL

\$ 4 1.77 mg

Par to Sistem

## Departure delays leave investors counting the cost

Eurotunnel's often strained relations with its shareholders took another knock last week when an ill-judged comment from its finance director, that revenue targets from the Channel nunnel would not be met, jangled investors' nerves. Coming just ahead of the company's

announcement today of its first-half results, the news of the missed targets left Eurotunnel's shares down 20p on the week at 228p.
That Eurotunnel was likely to miss

its forecast of £137m (\$216m) revenues in 1994 has been obvious for some time as a result of delays in the launch of its freight and passenger services. But the casual way in which the company appeared to acknowledge this

did little for its image. Eurotunnel says it is still within the financing limit agreed with banks in May at its 2858m rights issue, but analysts are not so sure. The delayed start may have lopped £30m to £50m off revenues while the poor performance of its shares makes it unlikely owners will want to exercise their 300p warrants.

Eurotunnel calculated in May that it had £419m for contingencies. But if the income from the exercise of warrants and the effect of a leasing deal are taken out then the margin was only

The delayed start could put Eurotunnel in breach of its banking covenants though it is unlikely the banks would force the issue. Having come this far with the £10hn project they have no desire to bring it

But this indicates that the company may have to make a third cash call next year on its bankers and shareholders. The picture is not entirely gloomy, bowever. The fares discounting between the ferries has eased in recent months while the sinking of the ferry

Estonia has put into perspective fears

voiced about the safety of the tunnel.

INT'L BUSINESS MACHINES Engineering a success story

International Business Machines will report third-quarter results Thursday. The world's biggest computer company is in the midst of a broad "re-engineering" effort to boost profitability. Wall Street analysts forecast third-quarter earnings of about 90 cents per share, compared with losses of 12 cents per share.

Mr Lou Gerstner, IBM chairman, said last week that the company is making progress. "Unfortunately we have an conomic cost structure but we are well into fixing the problem." In Europe, IBM is ahead of schedule in reaching competitive cost targets.

Stronger-than-expected sales of mainframe computers have boosted IBM's profitability in the last two quarters and analysts will be watching to see whether that trend is continuing Sales of IBM's new Aptiva home computers, introduced last month, should help to boost the performance of IBM's PC division, which has suffered market share losses this year in the face of fierce competition from Compaq

IBM will introduce new desktop and portable personal computers on Monday. The desktop models, aimed et corporate PC users, are expected to be loaded with IBM's recently announced Warp" software, which competes with Microsoft's Windows. The company will also launch new versions of its popular "Thinkpad" notebook computers.

## OTHER COMPANIES Intel on course for 3Q earnings rise

■ Intel: The world's largest computer chip maker will report its third-quarter results after the close of trading in New York today. Analysts are forecasting earnings of about \$1.51 per share, compared with \$1.33 in the same period last year. Intel has just begun an \$80m advertising campaign to boost sales of PCs containing Pentium, its highest performance microprocessor, during the busy Christmas selling season. The company continues to battle imitators in the microprocessor market Last week, Intal sought a temporary restraining order to force Advanced Micro Devices to halt sales of microprocessor clones.

Credito Italiano: The recently privatised Italian bank launches an issue of new shares and bonds today to raise up to L1,520bn (\$965m) for future acquisitions. The discounted share issue is priced at L1,500 a share, against a current market price of about L1,970. The exercise of warrants attached to both bonds and shares could raise a further L1.120bn by the end of 1997.

SmithKline Beecham: Third-quarter figures from the Anglo-US drug company, to be announced tomorrow, will be scanned for clues to progress in integrating DPS, the drug distributor it bought for \$2.3bn in May. It will also be the first full quarter to show the effects of the expiry of the patent on Tagamet, the ulcer drug, once SmithKitne's best

well above £900m, (\$1.42bn) compared with £341m a year earlier. M Smiths Industries: Full-year pre-tax profits are expected to advance 9 per cent to about £114.5m when the UK

## CORPORATE RISK MANAGEMENT AND THE INTERNATIONAL **INSURANCE INDUSTRY**

## London – 3 November 1994

As the risk management function within corporations expands and evolves in response to an ever increasing array of risks, the ability of commercial risk insurers to meet their clients requirement could become a matter of their very survival. This conference will examine the implications of the changing balance of the role of brokers, insurers and risk managers and explore how the international insurance industry is responding to the new challenge.

## SPEAKERS INCLUDE:

- Mr H Felix Kloman Editor, Risk Management Reports Former Principal. **Towers Perrin**
- Mr Walter Kielholz Member of the Executive Board Swiss Reinsurance Company, Zurich
- Mr Clive Pracy Head of Risk Management. London Transport Council Member, AIRMIC
- Mr Stewart H Steffey Jr President Liberty International Holdings Inc
- Dr Herbert M Harrell Chairman, Harrell Associates Incorporated Founder, M200 Forum
- Mr John P Ryan International Practice Leader Tillinghast
- Mr Rodney Meere Chairman Willis Corroon Hinton

months. It blamed its meagre

pre-tax profit increase on a 4 per cent fall in sales per cus-tomer and a decline in interest

For the full year to February,

the company expects sales to

rise by 1.9 per cent to Y1,565bn

Jusco's pre-tax profits fell

partly because of a rise in depreciation costs stemming

from restructuring and the relocation of its headquarters. For the 12 months to Febru-

ary, the commany expects a 2

per cent rise in pre-tax profits to Y26.5hn on a 10.3 per cent

rise in sales to Y1,170hn.

and pre-tax profits by 5.5 per cent to Y86.5bn.

Hughes Communications, the main backer of the DirecTV satellite television system in the US, is believed to be interested in expanding into

Rurope. Preliminary approaches have been made to the two satellite television operators in Europe, Eutelsat and SES, the Luxem bourg-based organisation that runs the Astra satellite system.

Both organisations have sat ellites due to be launched within the next few weeks but both are understood to be full. SES plans to launch a fifth satellite in July 1995 which will probably offer digital ser-vices and Eutelsat intends to launch a digital satellite in

Interspace, a specialist newsletter, said yesterday that Hughes was interested in trying to launch direct-to-the home satellite television services to European countries not well served by satellite television, such as Italy, Spain and eastern Europe.

By Christopher Brown-Humes in Stockholm

Skophank, the state-controlled Finnish bank, has warned that it might need further government support before the year end, in spite of a 49 per cent reduction in net operating losses in the first eight months

The hank said its results could deteriorate in the final four months of 1994 if it has to make provisions to cover possible losses from restructuring.

The bank has been the big-gest casualty of the Finnish banking crisis, receiving more than FM17bn (\$3.62bn) in government assistance since it was rescued by the Bank of Finland in September

The drop in the bank's net operating loss to FM448m in the first eight months followed a 58 per cent fall in credit losses to FM371m.

The improvement would have been greater but for a 47 per cent decline in income from financial operations to FM176m. The fall reflects a significant reduction in lending volumes and a FM55m loss on bonds.

Skopbank's role as the central bank of the Finnish savings banks has changed following the restructuring of the Savings Bank of Finland in

The bank continues to service domestic corporate customers and also represents the savings banks in wholesale

# Electrolux to expand in Asia

By Christopher Brown-Humes

Electrolux, the world's biggest manufacturer of household appliances, said that it aims to double its revenues from Asian countries to SKr10bn (\$1.37bn) within five years as part of its expansion drive in the

"Our target is to be one of the major players, corresponding to our position in Europe

and the US," said Mr Leif Johansson, Electrolux chief executive. The company also said that it was planning to open five new factories in the region

within three years at sites still to be finalised. Following its purchase of AEG's household appliance unit, Electrolux has switched the focus of its expansion strat-

It has recently launched a \$50m investment programme in the Asean region and said that it intended to spend \$100m in China over three years. The moves anticipate a substantial rise in disposable incomes.

"We expect China to emerge as the world's largest market for refrigerators by the end of this year and will be exporting more fridges than Japan," said Mr Johansson.

# interim profits at Kvaerner

By Karen Fossii in Osio

Kvaerner, Norway's second largest listed company, reported far better than expected eight-month results shortly after sounding a warning of substantial losses by the oil and gas division, which will weaken overall group per-formance for the full year.

The group achieved record interim pre-tax profits of NKr1.02hm (\$154m), up 41 per cent on last year's NKr720m, with four of Kvaerner's five business sectors showing sharp improvements, particu-larly shipbuilding.

The eight-month result includes NKr190m in unrealincides National in infrai-ised exchange gains, against Natiaon in unrealised Joses last year, related to long-term financing of the group's shipping fleet.

ping neet.
The advance came in spite of a pre-tax loss of NKr202m by the oil and gas division, reflecting cost over-runs on the North Sea Troll oil concrete floating platform construction project and providence. struction project and provi-sions for future restructuring. Last year's comparative figure was a profit of NKr286m.

Group sales rose 5 per cent to NKr16.73bn but operating profit slipped 8 per cent to NKr875m due to increases in operating costs and deprecia-

Shipbuilding boosted operat-ing profit by NKr251m to NKr830m as sales shot up by NKr2.01bn to NKr7.08bn. Pretax profit rose by NKr254m to

Mechanical angineering posted an operating profit of NKr49m, against a loss of NKr76m, despite a NKr138m dip in sales to NKr3.22bn.

Pulping saw operating profit slip by NKr15m to NKr78m, but pre-tax profit rose by NKr66m to NKr166m. Sales plunged by NKr855m to NKr1\_23bet

Shipping posted an operat-ing profit of NKr64m, against a loss of NKr40m, and returned a pre-tax profit of NKr188m compared with a loss of NKr142m as revenues rose by NKr116m to NKr833m. ture companies, existing

# Milan bourse sets date for launch of futures contract

By Andrew Hill in Milan

The Milan stock exchange intends to launch its long-awaited futures contract, based on the new MIB 30 index of leading Italian shares, on November 28.

On the sama day, the exchange will extend the close of share trading from 4pm to 5pm, and end the distinction between shares which can be traded only in the afternoon session and larger stocks which can be bought and sold throughout the day.

Mr Ettore Fumagalli, a mem-ber of the exchange council, confirmed the launch date on

it could be postponed until December 2, if necessary.

"I think we will have a flat phase at the beginning [of futures trading], with a limited number of contracts traded. but then I think we will have a real take-off," he told journal-

The Milan stock exchange has been working hard to compete with other European exchanges, and to attract Italy's small investors, who have traditionally preferred to place their savings in government bonds.

Today, the exchange is launching a regulated system

Friday, although he added that it could be postponed until December 2, if necessary.

for trading in small quantities of shares, which fall below the threshold for on-screen trad-

"To be complete, this has to be a market which allows everyone to operate," Mr

Fumagalli said. The new futures contract - known as the FIB 30 - will be promoted with a series of international road-shows, beginning in London at the end of this month, and will be traded between 9.30am and 5.30pm once the market is launched.

The MIB 30 index, based on the 30 largest and most widely traded stocks, is to be compiled by the exchange from today.

## Frankfurt SE cuts seat prices

By Andrew Fisher in Frankfurt

The Frankfurt Stock Exchange has cut the price of floor seats by more than half and reduced its electronic order-routing fees to make trading cheaper and more bouid.

Under new rules passed Fri-day, traders abroad will also eventually be able to join the IBIS electronic trading system. The exchange – accounting for three-quarters of business on Germany's seven stock markets - said interest in IBIS banks (half foreign and half membership had been shown from London, Amsterdam and Paris in particular, and from Switzerland and Luxembourg. The fee for admission to floor-trading has been cut from DM500,000 (\$322,580) to DM200,000, with brokers' fees down from DM200,000 to DM80,000. The DM15,000 admis-

sion fee for individual traders has also been removed. The exchange's current membership comprises 138

German) and 97 brokers. Mr Werner Seifert, chief executive of Deutsche Borse AG, which operates the Frank-furt exchange said: "Our goal is to offer cheaper and more liquid trading than all other markets in German securities." Members using only the electronic order-ronting system will pay half the annual DM24,000 trading fee; the

trader has also been waived.

## Beta to launch fund for Cuba

By Pascal Fletcher in Havana

Beta Funds, a London-based company, is planning to launch a \$50m investment fund for Cuba and has created the first investment management company to be represented on the island.

Havana Asset Management, a new subsidiary of Beta Funds International, will manage the planned Cuba investment fund, which is expected to be estab-

lished early next year. Mr Peter Scott, Beta's chief executive, said its expected areas of investment included hotels and tourism, mining, food and beverages, the hightech pharmaceutical sector and specialised manufacturing. It would invest in new joint ven-

Cuban companies and foreign companies with a significant exposure to Cuba.

Beta specialises in spotting new markets and pioneered the creation of investment management companies in Vietnam and Poland. It has more than \$230m invested in emerging markets.

The Cuban government has opened up sectors of the economy to foreign investors. It has signed more than 100 new trade and investment deals, from oil exploration and mining to cosmetics and textiles.

Mr Scott said the Cuba fund had aroused interested in the

UK, Scandinavia, Switzerland, Spain, Italy and Mexico. Besides Beta, the other shareholders in Havana Asset

Management are Nueva Com-

pania de Indias, a Spanish trad-ing company operating in Cuba, and James Miura, of Ninecastle Overseas, a UK investment management com-pany. Mr Scott sald Cuba had provided legal safeguards for foreign investors by signing investment promotion and protection agreements with a number of countries, including

the UK. Mr Scott said the fund's articles would not permit the participation of investors from the US, whose government maintains a trade and financial embargo against Cuba. He believed relations between Cuba and the US would follow the same path as Vietnam, against which Washington lifted a long-standing economic

embargo earlier this year.

Global Investor / Bronwen Maddox

Masters of a fragmented universe

from only a bandful of industries. Once the height of fasbion, used to

justify the acquisitive tendencies of companies right across the stock market, it fell from popularity when many of those deals proved disappointing and wben recession squeezed margins and balance sheets.

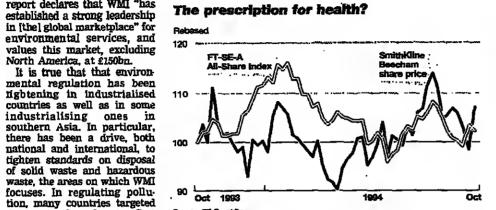

But in some corners it lives on. At least two companies among those declaring third-quarter corporate results this week continue to wield the language of globalisation unabashed. They do not suggest that the pursuit of international scope is damaging in itself but they do lend some weight to the sceptics.

## ■ WMI

Waste Management International, the UK arm of WMX Technologies of the US, which releases its third-quarter results today, is one case. WMI has pursued growth through acquisition; last year it made 48 acquisitions in 12 countries. and in the second quarter this

ence allows It to improve the management of the businesses WMI's directors argue that pollution control is a global it takes over. That is plausible, business. Last year's annual

## report declares that WMI "has

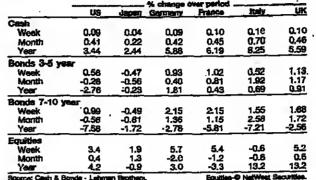

but risky. The liabilities of waste companies that have been technically lax as well as inefficient are potentially huge. WMI also argues that once it has entered a market it can

grow organically by winning new contracts because it has advantages over local companies. It can, it says, display to government officials a track record of managing large scale projects. Its size also reassures

them about its ability to meet potential liabilities; adequacy of financial resources became a condition of UK waste licences earlier this year.

However, one of tha unfortu-nate near-global characteristics of the waste industry is that choice of contractor is frequently influenced by special deals, if not corruption, particularly where local government

## Total return in local currency to 13/10/94

cynical to ask whether the attractions of the profession-ally run "outsider" to such markets will prevail ovar those

offered by local rivals.
In WMI's case, the question of whether the group's rush for international presence has left it capable of organic growth is now in the forefront; some analysts believe lts hefty goodwill write-offs and consequently rising gearing are a constraint to

for e ign exchange markets. But they

the international monetary

ferences and reports is that

nobody is particularly satis-

fied with the so-called "non-system" of floating exchange

wild gyrations

of the rouble

may be a world away

cupations of

further acquisitions. It is perhaps too early to judge. The group has had notable success in winning con-tracts in Asia, but it is harder to assess its chances in Europe given sluggish economic recovery. The slump of some 15 per cent in the share price relative to the FT All-Share Index since its 12-month peak in September largely reflects concerns about European growth, and Italy in particular. But the group will be under pressure to demonstrate that the world's waste industry is not simply a fragmented collection of essentially different businesses, and that global presence pays off.

## SmithKline

Some of the same points can be put to the world's pharmaceutical and healthcare giants. including SmithKline Beecham, which reports thirdquarter results on Tuesday. SmithKline's results will shed more light on the impact of the loss of US patent protec-tion for Tagamet, the group's ulcer treatment. But most attention will be focused on the integration of the two recent mega-deals: the \$2.9bn purchase of Sterling Winthrop, the over-the-counter medicines group, in August, and the \$2.3bn purchase of Diversified Pharmaceutical Services. one of the four largest US drug

wholesalers, in May. The strategy, which pushed gearing up to nearly 300 per cent, assumes that the deals

will belp protect margins and profits growth as competition from generic drugs grows and as governments pare back bealthcare budgets. In the case of the Sterling deal, which makes SmithKline the world leader in over-the-counter drugs and sharply reduces its dependence on the US, that reckoning looks sound.
According to SmithKline, the

fither rise meet the meet postance

worldwide OTC market grew by more than 7 per cent last year, twice as fast as in the US. SmithKline bopes to use its distribution network in 100 countries to lift sales across its product line. It is also betting that European governments, hard pressed to pay the cost of prescription medicines, will increasingly back OTC reme-

Analysts question wbether the long-term profitability of the OTC market is as great as SmithKline expects, and are anxious to see evidence that it can cut costs as promised. But their bigger concerns are directed at the DPS deal.

It is unclear yet whether the deal will be the platform for the provision of wider health care services, as SmithKline hopes, and whether that concept can be exported to Europe and beyond. Givan the wide variations in national healthcare systems, it would be surprising if there were a simple prescription for success.

# Lead and zinc group meets

Leaders of the world's lead and zinc industries, who have been meeting in Vienna over the weekend, today begin the 39th full session of the International Lead and Zinc Study Group.

The session, which continues tomorrow, follows committee meetings among the 300 government and industry partici-pants. Many will bave been continuing debates begun at last week's London Metals Week on the influence on metal markets of the influx over the past two years of money from international investment funds, which have come to regard commodities as a long-term asset to be traded as alternatives to traditional securities such as equities and

North America, at £150bn.

threats to air and water first

age a landfill in the UK does not imply that the company

can do the same in Germany.

WMI argues that its experi-

The distortions this has entailed will be a factor when the study group considers demand and prices for the two sister metals.

A report published last week by Billiton Metals said botb metals were "poised to derive significant benefits from the period of synchronised growth situation. These will have little emerging io the major impact on lead concentrate

industrialised economies". "On the production side," it

said, "mine cutbacks have resulted in substantial shortfalls of concentrate [an intermediate material]. In 1993 contained zinc output fell by some 450,000 tonnes (8 per cent), while that of lead declined by 300,000 tonnes (13 per cent). Further reductions will be experienced this year, although restarts and new additions to zinc capacity are already starting to reverse this situation. These will have little

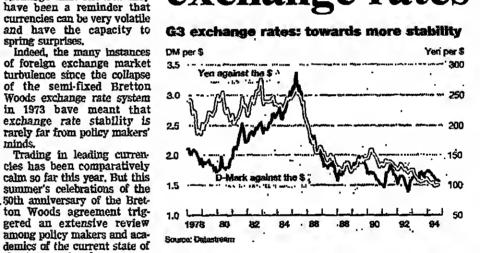

output, and a further deficit seems likely this year." Other events this week

trade and investment have grown faster than world

strong to permit any attempt rates for the world's leading by the Group of Seven leading traded currencies. On the industrial countries to peg currencies in a more formal way. With characteristic other hand, it is difficult to think of anything better. The last of the big conferences marking the 50th birthbluntness, Mr Kenneth day of Bretton Woods took Clarke, the UK chancellor, place just ahead of this year's annual meetings of the Inter-national Monetary Fund and said that a return to targets for exchange rates was "not remotely in the gift of the G7".

World Bank in Madrid. It was clear that there was a strong desire for greater exchange rate stability, particularly among such international monetary luminaries as Mr Paul Volcker, the erstwhile chairman of the Federal Reserve Board, and Mr Jacques de Larosière, the former managing director of tha International Monetary Fund rates are thought to worsen the climate for investment who now beads the European Bank for Reconstruction and

Equally striking was the rejection by practising finance

The World Index (2151) .......179.14

incomes since 1983. But these relative successes are no reason for leaving the system unchanged if it can be

In considering ways of pro-moting exchange rate stability, officials have been looking bilities of the international Monetary Fund.

At present the IMF is charged with exercising "firm surveillance over the exchange rate policies of countries". To this end it examines international monetary issues and analyses in detail the economic policies of its members, usually by sending missions to national capitals. These comb through the relevant data and discuss the results with the governments con-cerned. The findings from these so-called Article IV consultations are discussed by representatives of member countries in the IMF board but generally kept out of the

Earlier this month, the Fund's policy making Interim Committee, representing its

179 members, ordared the IMF's executive board to work on strengthening Fund sur-

The idea is that if countries can be persuaded to pursua sound and compatible economic policies, there will be less danger of exchange rates

moving out of line. However, surveillance bas been around for some time and bas not always proved successful. Mr de Larosière pointed out in Madrid that It had failed to prevent a sharp increase of public indebted-ness in industrialised countries in the 1980s.

The policy environment may be more encouraging today, even though this month's IMF meetings were marred by a row between the G7 countries and other nations over a proposed boost to global monetary reserves.

Industrialised and developing countries are in broad igreement on the policies required to foster sustained non-inflationary growth. With policies and performance more in line than before there should be fewer fundamental reasons for exchange rates to move out of line.

There are also plenty of ldeas for making surveillance more effective. Ms Dobson has put forward suggestions for surveillance system "to promote international peer group pressure for sound domestic policles". In particular, she suggests that the results of the IMF's Article IV consultations should be published. She bas called for the greater involvement of the fast grow-ing east Asian countries in discussion with the G7

nations.

But although surveillance is fasbionable, Mr Micbael Mussa, the IMF's chief economist, warns that it would be going too far to see it as a stepping stone to a more fixed exchange rate system.

Such words will encourage the supporters of target zones tbey have lived to fight

But the fact that K ! - lade

4.

0.50

. . . .

7.0

Last week'a barrage of economic data was not quite a clean sweep for the bulls, but four out of five winners were more than enough to soothe Wall Street's interest rate woes, at least for

the time being. Nevertheless, analysts say stocks may have difficulty making much headway this week, even though the third-quarter reporting season is in full

Part of the reason is the market surged during most of last week. Since the release of surprisingly timid employment data during the first week of the month, the Dow Jones Industrial Average has appreciated nearly 3 per

The impression of moderating economic growth imparted from the jobs report was reinforced last week by news of a downturn in producer prices, a tame reading on the consumer level and stagnant output by US factories and mines.

Best of all, the rate at which the industrial sector was utilising its total capacity slipped, suggesting inflation would stay benign in the coming months. Only September retail sales

came in a bit stronger than expected.

The prospect of an imminent move by the Federal Reserve to lift short-term rates now seems remote. Thus, monetary policy has joined Haiti, Kuwait and US-Japanese trade relations on the list of threats which have receded as immediate concerns. Most economists believe the Fed will wait until after the November elections before tightening its policy.

# **Dow Jones Industrial Average** 3826 Source: FT Graphite

Frank McGurty

expended its potential to trade higher on the relief. The Dow has been brushing against technical resistance at the 3,910 level while the more broadly based Standard & Poor's 500 will have difficulty breaking through the 470 mark. On Friday, it closed at 469.10.
"It's hard to see what will push the

market higher in the short run, ootside of good earnings news," says Mr James Solloway, an analyst at Argus Research in New York. "The trouble is, it's hard to judge how much of the improved earnings is already built into share prices.

Last week, investors' expectations were mostly vindicated but strong performances did not always translate into big gains in share values. Chrysler was the first of the Big Three car makers to release third-quarter results, announcing a 55 per cent profits rise. But its shares improved only slightly. This week General Motors is expected

to publish its results. Some analysts fear its key North American operations will post a loss, though a robust bottom line is widely forecast.

IBM's third-quarter results, still the computer groups' bellwether, are also due. Wall Street expects to see continued progress from the company, which was running at a loss a year ago.

## LONDON Final quarter

## promises more gains

Suddenly, the UK stock market looks a more confident place and the final quarter of the year offers a more promising prospect. Since the beginning of October, the market has recovered by about 5.7 per cent after its prolonged setback over the previous month and more importantly, the gilt-equity yield ratio has returned to around 2.19 times. The first question on the lips of every market analyst is whether the market rebound will carry it up to those optimistic year-end targets set up earlier in the year. This would require a

from Friday night's levels, so it may be a little early to start cheering. The technicians, as always, sound cautious. Derivative Securities, the futures market specialist, having correctly pointed out that the market was markedly oversold at the end of last week, is now wary of the steepness of the sudden rise; "far too steep to be

further gain of well over 8 per cent

sustained for too long", it comments.
If the market breaks out above the Footsie 3,110-3,135 band, Derivative Securities sees the next line of resistance at 3,175-3,220. Still a fair distance away from those 3,400-3,600 Footsie year-end forecasts on record.

The view consolidating among analysts is that the market has been over-estimating the dangers of inflation and the interest rate fears which go with them. . . . the implied risk embedded in the valuations of gilts and equities is way too high," summarises Richard Jeffrey at Charterhouse Tilney, adding bluntly that the belief that have rates could move a further 1 per cent. higher this year "was wrong". The

# FT-SE-A All-Share Index 1,500

Terry Byland

strategy team at Yamaichi puts it even more strongly, saying the latest inflation data indicates that the previous figures were "probably an aberration".

October 1994

This sea change in views on inflation has been inspired by the US as well as developments at home. Linked to expectations of a broadly neutral Budget next month - at the Conservative conference, the chancellor of the exchequer stood fast against premature tax cuts - the likelihood of a further recovery in gilts this week is rated highly. And, as equity strategists have argued for many weeks, recovery in bonds is the required basis for a recovery in equities.

Markets have remained highly volatile, and investors would be wrong to ignore this just because the frend has been upward, for a change. This week and the week following present a host of hurdles in the shape of global and domestic economic data.

Also overhanging investors will be the prospects for the November budge and the likelihood that an important by-election will shortly test the nerves as well as the political ratings of Mr Major's government. The market may have to struggle hard for that final 8 per cent gain.

## International offerings

# Strong overseas interest in Swedish privatisation

International investors will soon be able to invest in Stadsbypotek, Sweden's largest mortgage lender, currently being privatised by the Swedish government

The international equity portion of the deal may be smaller than originally anticipated by bankers advising the government. But there are hopes that overseas investors could buy up to \$300m of shares, making the deal one of Scandinavia's and possibly one of Europe's biggest international equity

offerings this year.
This could be one of the last opportunities for some time for investors to obtain privatised Swedish stock because the newly-elected Social Democrat administration is less committed to state sell-offs then its

"The current government has made no commitment to a privatisation programme. We will see a hiatus with no new paper coming through. The flow of paper will dry up for a while," said Mr John St John, director of equity capital markets at Klainwort Benson, which is joint global co-ordinator of the deal with Alfred

Kleinwort and Alfred Berg are co-leads for the US tranche, with Salomon Brothers as comanager. The tranche for the rest of the world, including Sweden, involves Goldman Sachs, UBS, Cazenove, Nomura, Indosuez, J.P. Morgan and Dresdner. Overall, Stadshypotek. a

mutual company which con-trols about a third of the Swedish mortgage market, aims to raise SKr3bn in an international and domestic offering. Bankers are impressed by overseas interest. "I have been

astomished at the interest from big, blue-chip institutions, both in Europe and the US," said Mr Jakob Kinde, director of corporate finance at Kleinwort Ben-Kleinwort Benson was

brought in after its success with the sale of Abbey National, the UK building society, and the 1993 demutualisa-tion of Foreningsbanken, the Swedish farmers' bank. Mr Kinde says Stadshypotek represents good value. "This is a low-risk business with high earnings ability."

Bankers bad boped there would be \$500m for international investors, but the domestic take-up has so far been higher than expected, partly because Swedish home owners and corporate borrowers are being offered free shares to tempt them to invest in Sweden's largest initial public offer. This means the precise size of the international offering will not be known

until the sale offer for the domestic side - described by Mr Kinde as a "rights issue to mortgage holders" - closes on

Kleinwort has introduced a unique and complicated structure for the domestic side of the Stadshypotek deal.

Borrowers who have mort-gages with the Stadshypotek will be given 37.5m shares currently owned by the stateowned Stadshypotekskassan or Urban Mortgage Bank, for free. They will also be offered the right to buy a total of 37.5m new shares at SKr80 a share.

The bigger their mortgage, the more new shares they can buy. The UMB shares were trading at around SKr90 each on Friday. About half of Stad-sbypotek's 760,000 mortgage bolders are property companies which may not subscribe to the rights, and their entitle-ment will form the basis of the international tranche.

The UMB owns all 80m of the existing Stadshypotek shares. After the capital increase its shareholding will be cut to 36 per cent. All the SKr3bn raised from the rights issue will go to boost the balance sheet of Stadshypotek, allowing It to obtain better terms when it begins to borrow in its own name at the start of next year.

## MILAN

The November trading account, which starts today, will be marked by several capital increases, the largest being that of Credito Italiano. which is launching a rights issue, priced at L1,500, to raise more than L1.000bn.

**UBS** notes that Credito is following in the steps of BCI, which raised money after the summer and, like BCI, is talking of a possible large acquisition.

"Rumours are already beginning to circulate about various possible targets and, with the improvement of banking margins in the second half of this year, this would

help to lift the banking sector out of its doldrums." Meanwhile, Milan'a new Mib 30 index, to be used as a base for futures contracts, is launched today calculated on a basket of 30 blue chip shares. The index will be adjusted every five minutes and every minute when the futures

contract is in place. The base value of the Mib 30 was set at 10,000 using the value of December 31 1993. Further measurements are based on the existing BCI-30 index run by Banca Commerciale Italiana

The new index will be assessed daily from start of negotiations and will finish with the end of contract cancellations.

## **PARIS**

The market continues to be volatile, although most commentators have an overweight position, favouring France over Germany on a medium to long-term view, writes John Pitt. S.G. Warburg is overweight in the consumer sector, and it also likes the luxury end of the sector, such as LVMH.

However, within the luxury segment, Rémy Cointreau, due to release half-year results this week, is less favoured by brokers. James Capel has downgraded the stock to hold, given the drain on profits due to heavy investment in upgrading its distribution

## **JOHANNESBURG**

The South African markets will be focusing on the release of the major gold producers' quarterly results this week, including Angio-American, Johannesburg Consolidated Investments and Gengold, writes Mark Suzman . The country's other major

mining house, Gold Fields of South Africa, reported last week. It showed improved profits and attributed them to a fall-off in the election-related unrest and work stoppages that had dented the June figures, Following the successful resolution of this year's wage negotiations, the other mining companies are also expected to have boosted

## production on the quarter. which should cheer investors

Whether the results have a significant effect on the stock market, however, is largely dependent on the fluctuating gold price. In recent months. the bourse's All Gold Index has been rising steadily on the back of an improving gold

However, after the metal failed to breach the psychologically important \$400 an ounce barrier, speculators have started to sell and in the past two weeks it has since tumbled back below \$390 on the back of profit taking. Gold shares have largely followed the metal's downward trend and are currently well off their September peaks.

## TOKYO

Subscribers who have been reallocated Japan Tobacco shares for the second round of sales have until Thursday to purchase the stock. The ministry of finance amounced last week that 66.2 per cent of the Japan Tobacco shares offered had been unsold. Mr Jason James at James Capel expects, however, that investors will remain unenthusiastic, and that Y300bm of the issue will remain

While Japan Tobacco's saga has had little impact on the broader stock market, the ministry has yet to decide whether to release the unsold shares on to the secondary

# Market hampers Taiwan financial ambitions

aiwan wants to use its become a regional financial centre.

However having a stock market that is highly restrictive to foreign investment, dominated by insiders and subject to political interference poses a formidable obstacle to such ambi-

The problem bas been brought sharply into focus by a recent string of share payments defaults which upset the stock market and sparked accusations of lax regulation and involvement of politicians and officials.

"This kind of event has happened repeatedly. We hope this time the government can institute reforms to prevent it from bappening again," said Mr Daniel Chen, chief economist at ChinaTrust Commercial "The authorities need to to

re-examine the whole system, to re-examine the regulatory framework to see whether the securities and exchange commission has enough power and tools to monitor and regulate the stock market effectively." Shares fell by nearly 15 per cent only to rebound 8 per cent last week following the crisis which involved 28 securities houses and a total of T\$7.5bn in bounced cheques. On Satur-

day the market rose almost 2 per cent. Mr Day Linin, chairman of the securities and exchange commission, called on the central bank to relax barriers to foreign investment, arguing that funds managed by overseas institutions had proven to be a force for stability in the

lifting ceilings on foreign investment, citing concerns over the effect of capital flows on the exchange rate. Analysts say government officials privately fear a covert influx of "red" Chinese money and that foreign investors would take short term profits.

Taiwan is one of the biggest stock markets among the emerging economies of Asia with a total market capitalisation of \$209.2bn at the end of September. At that time direct investment by government approved foreign institutions stood at \$4.49bn or 2.15 per

associatea of Mr Oung Ta-ming, head of the Hualon group and the local market's most notorious stock player, triggered the recent incident. However evidence uncovered so far suggests that as many as thirty legislators, mostly from

the ruling party, as well as government officials, may have played a part in the crisis. Ona of the main problems, according to analysts, is that the SEC, which falls under the ministry of finance, does not have the independence and authority it needs to regulate the stock market effectively.

It cannot investigate or prosecute trading irregularities but must rely on the justice minis-try's investigation bureau and the courts. And despite the best intentions of securities regulators such as Mr Day, who is widely respected and considered above reproach, investigations can be subject to political interference.

"It wouldn't matter so much if the government here took a hands-off approach, but on paper this is a heavily regulated market," said a analyst at in effect acting as fund man-

German election sets tone for markets

## a foreign securities house. Calls for reform are largely drowned out smid the din of recriminations as political par-

ties seek to discredit one another ahead of elections on December 3. Analysis say that reform is in any case unlikely in the absence of political will on the part of the ruling Nationalist party, or Kuomintang, which directly or indirectly controls much of the country's finance and industry

"Everyone knows the KMT itself is the biggest insider trader in this market," said a Taiwanese stock analyst. Furthermore, analysts say, the ruling party is spending vast sums to finance its candidates in elections, which it views as critical to countering the growing power of opposi-

tion parties. Some of the funds come directly from KMT coffers but legislators are tacitly encouraged to find their own financing, and the quickest way to make make money is from the stock market.

ager for politicians, officials and other wealthy individuals who cannot be seen investing in the stock market under their own names. "Oung Ta-ming is a magician with money. If you give him a dollar one day, he will come back two weeks later with ten dollars," said a Taiwanese investment banker.

The source of Mr Oung's magic touch is the wide and loyal following he has cultivated among the gambling-mad small investors who dominate trading on Taiwan's bourse. At the height of the market in the early 1990s, there were 4m trading accounts out of a population of

Ironically, it was Mr Oung's reputation as the patron saint of the small investor that carried him to victory when he stood for election to parliament two years ago, just after a similar share payment default cri-

sis linked to his group.
The advent of foreign investment, first permitted in 1991, is slowly changing the character of the market, analysts say The foreign-managed funds tend to buy blue chip industrials and avoid overpriced financial issnes or speculative shares.

Recently domestic investors have taken an interest in those stocks preferred by foreign

investors, dubbing them "foreign concept" stocks. Hualon is living in the past," said Mr Ben Chen, managing director of the Taiwan office of Barclays de Zoete

Wedd. "They still believe if they ramp share prices high enough retail investors will jump in. But in the past year investors have mostly been pursuing stocks with a good fundamental story." Analysts believe that as the

proportion of institutional investment, be it foreign or domestic in Taiwan'a stock market increases, share prices will be less susceptible to the manipulations of a handful of speculators. It is hoped that small investors will learn from repeated scandals and avoid speculative shares.

Meanwhile, the outlook for Taiwan's stock market is positive, marred only by uncertainties surrounding the demise of Deng Xisoping of China. There are also concerns that both formal and informal lenders will tighten credit in the wake of the recent cheque defaults

Nonetheless, the economy remains strong with economic growth forecast to top 6 per cent this year. Corporate earnings growth for blue chip companies should average 15 per cent in 1996, and in the near term the government is expected to sustain the index leading up to the elections in December.

# News round-up

## China

New rules for rights issues by listed companies are expected to help stabilise the Shanghai and Shenzhen equity markets whose A share indices, directed at domestic investors, were highly volatile last week. All rights issues must now be approved by the China Securities Regulatory Commission in addition to local governments, which previously had the final

**NEW YORK** 

## WORLD BOND MARKETS: This Week

## The US bond market ended last week on a positive note

following Friday's barrage of favourable news on inflation. Treasuries rallied after the government published figures showing only modest increases in consumer prices and retail

sales in September. The market was also consoled by news that industrial production in September was unchanged and capacity utilisation had slipped slightly. After other favourable economic reports during the

week, traders took the view that immediate pressure for an increase in interest rates had eased and the Fed would sit on its hands at least until the next meeting of its policy-making committee on November 15. With little in the way of

sensitive data due in the next few days, analysts think bond prices will drift upwards. Few shocks are expected from the figures for husiness deficit on Wednesday or

housing starts on Thursday.

## Benchmark vield curve (%)\* 14/10/94 -- Month ego --8.0 ----

Richard Tomkins

7.0 6.5 10 years 20

One possible danger point is the Philadelphia Fed business outlook survey, also due Thursday. MMS International forecasts that the net percentage of Philadelphia companies noting a business increase in October will have risen to 17.5 per cent from 14.8 per cent last month. If the pick-up in demand is accompanied by adverse readings on prices paid and prices received, fears of

inflation could be reawakened.

# Last week's subdued inflation figures enabled the gilts market to continue its recent

LONDON

rally, so traders are braced for some profit-taking this week. The most important statistic of the week is probably Friday's first estimate of third-quarter gross domestic product growth. Most economists expect the recovery to have slowed down from the second quarter, but Mr Nigel Richardson, head of bond research at Yamaichi International (Europe), is plumping for a quarter on quarter rise of 1 per cent. He believes that this should not worry the gilt market, if growth is seen to be

coming largely from exports. Indications of the strength of consumer demand will come from the Confederation of British Industry's distributive trades survey - out tomorrow - and Thursday's retail sales. publish details of its coming

injected a new confidence into the market. Thus said Ms Alison Cottrell, international economist at Kidder, Peabody Securities: "If bond markets had votes, Mr Kohl - rightly or

"All yields are market convention

wrongly - would romp home."
Even if he was not voted in again, she recommended investors to move up the yield curve, not jump off. The Rundeshank would see to it that any fiscal laxity in Bonn was met with stern monetary policies.

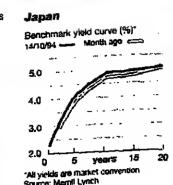

TOKYO

Favourable economic statistics and the Bank of Japan's manoeuvres on the money markets have increased expectations of a rise in short-term money market

With the new reserve maintenance period starting today bond market investors will this week be focusing on the central bank's operations and the level of the overnight call rates. A rise in the call rate above the 2.25 per cent at which it closed last week, could increase upward pressure on short-term money market rates.

Expectations of higher domestic short-term rates hava resulted in Japanese banks switching their fundraising from the certificate of daposit market to the Euroyen market.

Banks are wary of a further rise in CD rates, to which short-term prime rates (lending rates to first tier clients) are linked when demand for funds remain weak. Meanwhile, institutional

Emiko Terazono

investors are reluctant to increase their holdings of long-term government bonds.

Life assurers and other large investors are continuing to buy hank debentures because they are unlisted and investors are not required to disclose their positions at the end of the

interim term.
This has resulted in rates on five-year bank debentures falling below those of government bonds with the same maturity.

entbusiasm for lending to the

new emerging markets, bank-

cate", said oog financier. "We have observed some enthusiasm for Latin American credits. Banks have emerged from the Brady era and are now prepared to look at sovereign exposures," he adds. As well as Chemical and

Credit Suisse, other international hanks participating were Banco Santander, Dresdner Bank, Bank of Boston, UBS and ING, alongside a number of local banks.

to cover revenue sbortfalls prompted by delays in the privatisation of several gas distrihution companies.

Mr West believes that there will be no massive rush back

into the syndicated loan market but he expects that other "tailor-made" deals for Latin American borrowers could be in the offing. Nevertheless, there are fears in some quarters that in their

ers could be opening themselves up to a new deht

In a recent note Mr Raphael Soifer, analyst with Brown Brothers Harriman & Co, in New York, points to a steady increase of aggressive commercial lending to Latin America

"Don't look now but LDC debt is back," he says, with the cross-border exposure of US banks to developing countries increasing by 33 per cent since

"As those of us who have followed the banking industry for a while can never forget, what began in the 1970s as ostensibly barmless, short-term balance of paybarmless. ments adjustment facilitles' and interbank deposits, by the 1980s had developed into the full-blown LDC debt crisis," warns Mr Soifer.

Mr Michael Atkin, director for Latin America at the Institute of International Finance in Washington, concedes that Latin American indebtedness has increased,

partly hecause the internal savings ratios of Latin American economies are still relatively low.

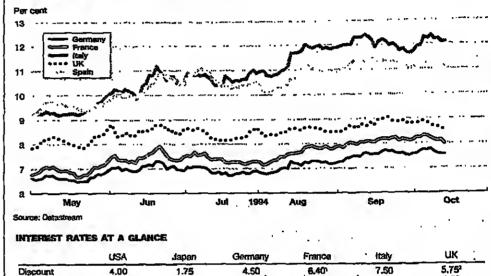

"It is certainly true that Latin Amarican indebtedness is building up. They are importing a lot of capital," he

The total debts of 16 Latin American economies monitored by the IIF amounted to \$529bn in 1994, almost double the \$274.5bn recorded shortly hefore the emergence of the debt crisis in 1981.

Debt now accounts for an even higher percentage of the region's exports than it did 13 years ago, at 264 per cent compared with 225 per cent. Nevertheless, be insists that "history is not repeating itself". The continent's private sec-

tor is now bigger and more widely involved, economies are more open to international trade and competition and macroeconomic policies generally are more to the liking of lenders. Significantly, governments are not resorting to external debt to finance public spending, says Mr Atkin.

# Japanese flop sparks pricing rethink

Japan's finance ministry is rethinking bow to price equity offerings, as the result of what could become a costly hitch to its latest privatisation, that of Japan Tobacco, the state monopoly cigarette maker.

The ministry is under fire from both Japanese and foreign securities houses over the second privatisation issue to go wrong since the introduction of tough new rules on the con-duct of equity offerings at the end of the 1980s.

An embarrassad ministry announced on Friday that there were no huyers for more than 65 per cent of the 436,666 shares allotted to small inves-

tors in Japan Tobacco.
As a result, the ministry runs the risk of falling Y408bn short of the Y958bn (\$9.75bn) it had hoped to raise from the sbare issue. The ministry is offering a total of 666,666 shares to individuals and institutions, comprising a one-third stake in the company. At the issue price of Y1.438m (\$14,631) a share, Japan Tohacco is val-ued at Y2,876bn (\$29.3bn).

it is unlikely, in these circumstances, that other small investors will voluntarily take up many of the left-over shares, say brokers. Ministry officials will decide what to do on the results of a second attempt to allocate unwanted shares by lottery. The final reckoning will be on Thursday. when payments on those shares fall due.

The flop increases the likelihood that Japan Tobacco's

already weak equity market and guarantee a poor reception for future privatisation issues, like West Japan Railway early next year and another tranche of the already-privatised Nippon Telegraph and Telephone. tem, to be fair, does serve the purpose for which it was designed. It stops companies on the way to the market from covertly handing out cheap

favours scandal, which provoked the rule change.

share price will fall when trading starts a week later, on October 27, unless the finance ministry keeps the unwanted shares. If the ministry fails to step in, a heavy loss could be on the way for hig investors. That could destabilise an

Japan's equity pricing syssbares to friends in high places, as was the case in the late 1980s Recruit shares for

In drawing up the new rules for pricing shares, the finance ministry took its inspiration for the auction system it has used for many years to sell government bonds. The result produces a system very differfor international share sales. One third of the shares to be issued are auctioned in advance to rich individuals and institutional investors.

The rest are sold by lottery to the public, at the mid-price of bids made in the auction. This drains off all the surplus institutional demand for the shares, before the issue even gets to the public, argue the system's critics, and ensures that the first few days' trading will be more likely to show a loss than in other international issues, which give

advisers more scope to set the

price at a level likely to stimu-

late the market. Big investors must pay the price they bid in the pre-offer auction, even if they are unlucky enough to have hid above the mid-price. In Japan Tobacco's case, bids accepted by the finance ministry ranged from Y1.36m a sbare, up to Y2.11m, prohably at the top end of total hids received. This way, you get no aftermarket," complains one for-

eign broker. A second problem is that the pre-offer auction risks setting a misleading price, in Japan Tobacco's case clearly higher than thousands of small investors will bear. It only reflects are short of target.

shares by the biggest and richest one-third of investors. rather than the demand from all potential huyers.

Japan Tobacco is not the only example of a flotation to have hit trouble under this system. Japan Telecom, a private sector long distance telephone operator, was a high profile flop only last month, despite the fact Nomura Securities priced it at a discount to the auction mid-price. Mass selling orders for JR East, a privatisa tion issue, made the stock exchange's computers hreak down and hit the whole market last October.

pelet bresiding so-/

Inference been was the

Foreign lohbylats, like the European Business Council. have for years been urging the finance ministry to adopt something like the book-building system of pricing shares, used in most international equity issues. This would reduce the mathematical distortions of the Japanese sys-

tem, it is argued.
The finance ministry does not usually cave in easily to outside pressure. But it has a clear self-interest in ensuring a smooth reception for future attempts to raise government revenue from privatisations, at

President Clinton told G7 news conference in Naples that economic growth was his priority, pushing dollar lower.

# Did they tell you first?

# (They did if you had Reuters Financial Television.)

Imagine being the first to know when a market-moving story breaks, vital minutes before your competition.

Imagine getting the story direct from the source, live, without delay.

That's the advantage you get from Reuters Financial Television. It puts live TV coverage of the financial news that matters in a special window right on your PC or workstation, integrated with your usual Reuter information.

Since its launch in June this year, Reuters Financial Television has carried an average of three live events every day, covering interviews, press conferences and speeches from the key players in international finance such as Tiermeyer, Greenspan

and Mieno, many of them exclusively. The speed advantage over other services has been anywhere from 30 seconds to 2½ minutes.

Unlike conventional TV news it concentrates exclusively on financial events, and alerts you only when something relevant is happening. You'll also quickly get informed reaction and analysis from respected market analysts to ensure you have the complete picture, plus news updates throughout the trading day.

It's like being there as international financial figures shape the news. The competitive advantage is obvious. And of course it's nice to know they told you first. Be there with Reuters Financial Television.

## **Compensation on Kuwait**

The United Nations Compensation Commission meets in Geneva to consider claims relating to Iraq's 1990 inva-sion of Kuwait (to Oct 21). The Commission, which is sifting through more than 2m claims totalling nearly \$160bn, will focus on damage to individual property and compensation for those forced to flee Kuwait. Most claimants will have to wait for their money until the UN lifts its ban on Iraql oil sales.

Russian economy: An International Monetary Fund mission starts talks in Moscow oo Russian economic reform, the government's budget and possible financial assistance for a stabilisation programme.

World trade: Trade ministers, officials and husiness executives begin a week in Colombus, Ohio, to discuss cutting the costs of doing business ahroad. The United Nations Conference on Trade and Development, the meet-ing's organiser, helieves streamlining procedures and paperless trading could save companies and governments worldwide \$100hn a year.

Infrastructure in Asia: Indonesia hosts the World Infrastructure Forum (to Oct 21). The conference brings public and private sector together to discuss co-operation in regional infrastructure development.

Environmental groups are due to sue President Subarto of Indonesia for diverting to a state-owned aircraft maker \$185m intended for replanting

Middle East peace: Jordan-Israel peace negotiations resume in Aqaba, on the Jordanian Red Sea coast (to Oct 20). Last week saw an agreement to link electricity supplies between Aqaba and the Israeli resort of Eilat. Outstanding issues are water and security.

Women's economic and social advancement, including equality at work and political representation, are the concern of a United Nations-sponsored meeting in Vienna being attended by some 50 European nations. Tha fiveday meeting is part of preparations for the Fourth World Conference on Women in Beijing next September.

UK politics: The House of Commons returns from its summer recess.

Eurotunnel, operator of the Channel tunnel, announces its 1994 first-half results. It will be its first opportunity to report on actual performance as opposed to making forecasts, though the results of just over a month of freight operations will not be very significant

At the sama time, the start date and fare tariff for the intercity Eurostar trains will be unveiled. Services between London, Paris and Brussels are expected to begin in mid-November.

FT Surveys: Business Schools: An A-Z Guide and International Telecommunications.

18

## **TUESDAY**

## Turkic states hold summit

Leaders of Turkey and the five Turkic states of the former Soviet Union meet in Istanbul for their second summit (to Oct 19). The group was set up in 1992 at Turkey's instigation, to draw together Azerbaijan, Kyrgyzstan, Turkmenistan,

Kazakhstan and Uzbekistan. The two-day meeting is likely to be dominated by the crisis in Bosnia, the Middle East peace process and unrest in the Caucasus, especially the conflict between Azerbaijan and Armenia.

Turkey's grandiose aim of creating a Turkic federation, floated at the inaugural conference two years ago, has faded. Russia's continued strong presence in the region overshadows all talk of unity.

Asylum in the UK: Amnesty International's British section publishes its study Prisoners Without a Voice: Asylum-Seekers Detained in the United Kingdom, showing that Home Office procedures violate international human rights law.

Simultaneously, the London-based Medical Foundation for the Care of Victims of Torture is due to issue a report saying that torture survivors seeking asylum in the UK are being detained for periods ranging from two to 17 months.

Saleroom: The largest emerald-cut blue diamond ever to be offered at auction is expected to raise \$8m at a jewellery sale at Sotheby's in New York. Of an intense powder-hlue, the 20.17 carat diamond is also favoured with good clarity and perfect propor-

Lost art: The Musée d'Orsay in Paris opens an exhibition of works by artists including Monet, Renoir and Gauguin, in the hope of discovering their owners. The collection of 21 paintings and drawings was part of a hoard taken from France by the Nazis during the second

The works resurfaced in East Berlin in the 1970s and spent 20 years hanging in the National Gallery there. They were returned recently in the wake of German reunification.

Phone-cars: Ford is to offer free mobile telephones and connections to the Cellnet system on nearly all its vehicles sold in the UK from today in an attempt to improve new car sales. The company expects at least 100,000 buyers a year to choosa the option.

Holidays: Sri Lanka.

FT Survey: The Prevention and Detection of Fraud.

## WEDNESDAY

## Black Sea energy plans

**Energy officials** from 11 Black Sea Economic Co-operation countries meet at the Bulgar-ian port of Varna for the first working meeting of the Black Sea and

Balkan regional energy centre, which i supported by the European Union. Most of the members have been moving from socialist-era planning to a market economy and face energy problems. They plan to co-ordinate strategies, hy agree-ing, for example, on the best routes for oil and gas pipelines.

Dynamic economics: The Organisation for Economic Co-operation and Development is to hold a high-level informal meeting for participants from OECD member countries and nine Dynamic Non-Member Economies (DNMEs) at a hotel in Tokyo. The emphasis will be "forward-looking" how can the OECD enhance the capacity of member countries and the DNMEs to address their common domestic and international economic problems in the coming year?

Ukraine's parliament plans to vote on President Leonid Knchma's reform programme, unveiled last week. The resolution is non-binding but will gauge the mood of the communistdominated chamber towards Ukrains's first significant attempt at economic reform. The chamber may also this week set a date for an awaited vote on Ukraine's accession to the Nuclear Non-Proliferation Treaty.

Salercom: The Lau Collection of early Chinese and Japanese photographs comes under the hammer at Christie's in London. Highlights include prints of the Imperial Summer Palace in Peking taken in 1860 immediately before its destruction, and the hand-tinted albumen prints of the Italian Felice Beato recording the people, costumes and landscape of old Japan. The photograph below comes from an album of 69 prints of Chinese subjects estimated at £4,000 (\$6,300) to £6,000.

## THURSDAY

## Vletnam focuses on deficit

Vietnam'a National Assembly is due to begin a landmark month-long session. Diplomats say the rubber-stamp legislative body is convening about a month earlier than usual because the communist leadership wants to tackle economic issues such as inflation and the growing hudget deficit before the year

Trade negotiators meet in Geneva for two days in a bid to thrash out s new Gatt code of fair trade practice for civil aircraft. With the US and the European Union far apart, hopes are dimming that a deal can be reached by the year-end deadline.

iran's President Hashemi Rafsanjani visits India - a few weeks after Iran received Farooq Ahmad Leghart, president of its ally Pakistan. Iran hopes to build a gas pipeline through Pakistan to India, but Rafsanjani has said economic co-operation between the three states is being held up by tension between India and Pakistan. Iran is positioning itself as "honest broker" to resolve differences between the two over such issues as Kashmir.

Hungarian debt: International Monetary Fund managing director Michel Camdessus visits Hungary. Tha IMF is urging the Socialist-led government to cut spending to prevent the country's high debt rising further.

FT Survey: The New UK Gas Market. Holidays: Kenya.

21 FRIDAY

## Confidence vote in Russia

The Russian Duma has called a vote of confidence in the government following last week's wild fluctuations of the rouble. President Boris Yeltsin moved quickly to repair the political damage by sacking the acting finance minister, Sergei Dubinin, and urging Victor Gerashchenko, head of the Central Bank, to quit. But many deputies remain furious about the whole affair and may bring the vote forward to earlier in the week.

CiS summit: Leaders of the Commonwealth of Independent States are due to meet in Moscow to debate economic union - formally agreed last month but not yet in place. Russian-Ukrainian relations will come up again; resolution of such thorny issues as the Black Sea Fleet and Ukraine's debts to Russia is still distant.

German M3: The September figures for the erratic M3 broad measure of the money supply are due for release. The expectation is that It will continue its decline, falling from 8.2% to 7.5%, but still above the 6% upper limit desired by the Bundesbank.

UK economy: There have been tentative signs, notably the August fall in manufacturing output, that the pace of UK economic growth slowed in the third quarter. Today's first estimate of gross domestic product growth is expected to reveal a 0.6 per cent quarter-onquarter rise, down from 1.1 per cent in the previous three months.

22-23

## WEEKEND

## Kyrgyzstan referendum

Tha Central Asian republic of Kyrgyzstan holds a referendum on Saturday on tha future shape of the Kyrgyz parliament. The former parliament, a hangover from the Soviet period, dissolved itself last month.

President Askar Akayev has called the referendum with the aim of achieving public support for a smaller two-chamber parliamant more representative of the population and of the country's regions

Economic Co-operation forum starts a two-day ministerial meeting in Osaka on Saturday dedicated in nurturing medium and small enterprises.

Apec meeting: The Asia Pacific

UK motor show opens to the public on Saturday in Birmingham (to Oct 30).

Spain's Basque country stages regional elections on Sunday. The moderate PNV nationalist party, a member of the governing coalition, is expected to emerge as the strongest sin-Reds on the streets: The

Communist Party of the US celebrates its 75th anniversary on Sunday, with damonstrations planned in 75 cities and a rally in Chicago.

Clocks go back one bour in the UK and Ireland. They go forward one hour in Brazil.

Compiled by Patrick Stiles. Fax: (+44) (D)171 873 3194.

## Other economic news

Tnesday: The UK's budget deficit has been falling, with economists predicting a 1994-95 shortfall of £30bn-£34bn, below the Treasury's forecast of £36bn. September figures, published today, are expected to show a borrowing requirement of £4.3hn.

The Confederation of British Industry's distributive trades survey will provide the week's first clue as to activity on the UK high street in September.

Wednesday: UK retail sales volumes are expected to have rebounded after a weak August performance. But the picture has been confused by signs of weak personal income growth and buoyant Mo figures. The consensus forccast is for monthly growth of 0.3 per cent.

Thursday: Britain's broad money supply growth has been weak during the recovery and September's annual growth rate in M4 is forecast at 4.8 per cent, near the bottom of the 3-9 per cent monitoring range.

Friday: Analysts expect a slight widening in the UK's trade deficit with non-European Union countries to £320m in September, from £262m in August. But this small deterioration should not alter the underlying trend of an improving UK trade position.

### International Telecommunications

Monday October 17 1994

Despite the excitement over telecom 'superhighways,' most of the world's population does not yet have access to a basic phone line, writes Andrew Adonis

Mets of our tente H 1. 18th

WEEKIND

gyzatan roferendum

### It is time to cut through the hype

'The linking of the world's people to a vast exchange of information and ideas is a dream that technology is set to deliver. It will bring economic progress, strong democracies, better environmental management. improved healthcare and a greater sense of shared

- US vice-president Al Gore, writing In the FT last month about his ambitions for a Global Information Infrastructure (GII), based on international fibre-optic telecommunications.

t is a noble goal. Mr Gore's play a critical role in meeting vision also sounds plausible, it. According to a recent World so successful has been the Bank presentation, about "superhighways hype" indus- \$55bn a year for the next six try. For many FT readers, sit- years will be required to build ting in offices crammed with phones, PC screens, on-line ing countries and the former information services, with a eastern Europe bloc. Whereas mobile handset in the brief-

But it is time for serious observers to cut the hype and The fact is that technology is not about to "deliver" the GII, and with it a paradise of universal democracy, peace, greenery and long life.

Most of the world's population does not even have access to a basic phone line; and that ner. is the best that technology, plus huge investment, is likely to deliver to even a small minority of people within the foreseeable future. Mr Gore

does not pretend otherwise. In 1985, the Maitland Commission noted: "In most developing countries, the telecommunications system is not chised networks and competadequate even to sustain essential services." Now, a decade on, networks remain grossly inadequate. Barely a fifth of 105 countries surveyed by the International Telecommunications Union boast more than 25 phone lines per 100 people, with most developing countries providing fewer than S per 100

ccording to a recent study,\* developing countries have 75 per cent of the world's population and 16 per cent of its product, but only 12 per cent of its tele-phone lines. As for the GIL, the typical Spaniard will this year be on the phone to someone abroad for a mere 20 minutes, but that compares with a few seconds for the typical Tanza-

Telecoms development is critical to economic growth: a study by the International Telecommunications Union plotting gross domestic prod-uct per capita against "tele-density" (telephone lines per 100 people) suggests that for every extra \$1,000 of GDP a country will have an extra 2.24 phone lines per person. The foremost challenge – in

telecom terms - for the developing world is the provision of more basic phone lines. The private sector in the developed world - banks, equipment suppliers and operators - is set to

IN THIS 16-PAGE SURVEY

up basic networks in developin the 1980s barely a fifth of case, much of it has already been accomplished. telecoms investment in the developing world came from developing world came from the private sector, about half of the \$55hn will have to come from that source.

In the World Bank's view, the only way to achieve that goal is for governments to embark on radical liberalisation and privatisation programmes. They are starting to do so, albeit in a halting man-

India, which has barely eight telephone lines per 1,000 peo-ple, is a classic study of the forces at work. Western opera-tors, eyeing the lucrative opportunities for satisfying unmet demand, have been flooding the Indian government with proposals for franing operations. The country's state telecoms commission gave them strong support, but the government, besieged by trade unions and worried about losing control, dithered about abolition of the state monopoly.

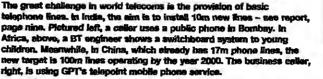

Finally, last month the government decided to allow private operators to bld for regional licences to operate networks in competition with the state monopoly - a significant concession, although less than the private groups wanted - but at the same time moved the strongly pro-reform chairman of the telecoms commission to another job.

It is a similar story in China the world's biggest telecoms growth market, where the country's ministry of posts and telecommunications (MPT) has fought tooth and nall against any weakening of its position. The MPT this year lost the bat-tle to prevent other state ministries setting up their own telecoms division, and it is set to face further deregulation of the market as Beiling seeks to attract foreign capital to help meet its target of increasing China's number of phone lines from the present 30m to 110m by 2000. Only in the developed world are "superhighways" – the upgrading of telecom net-

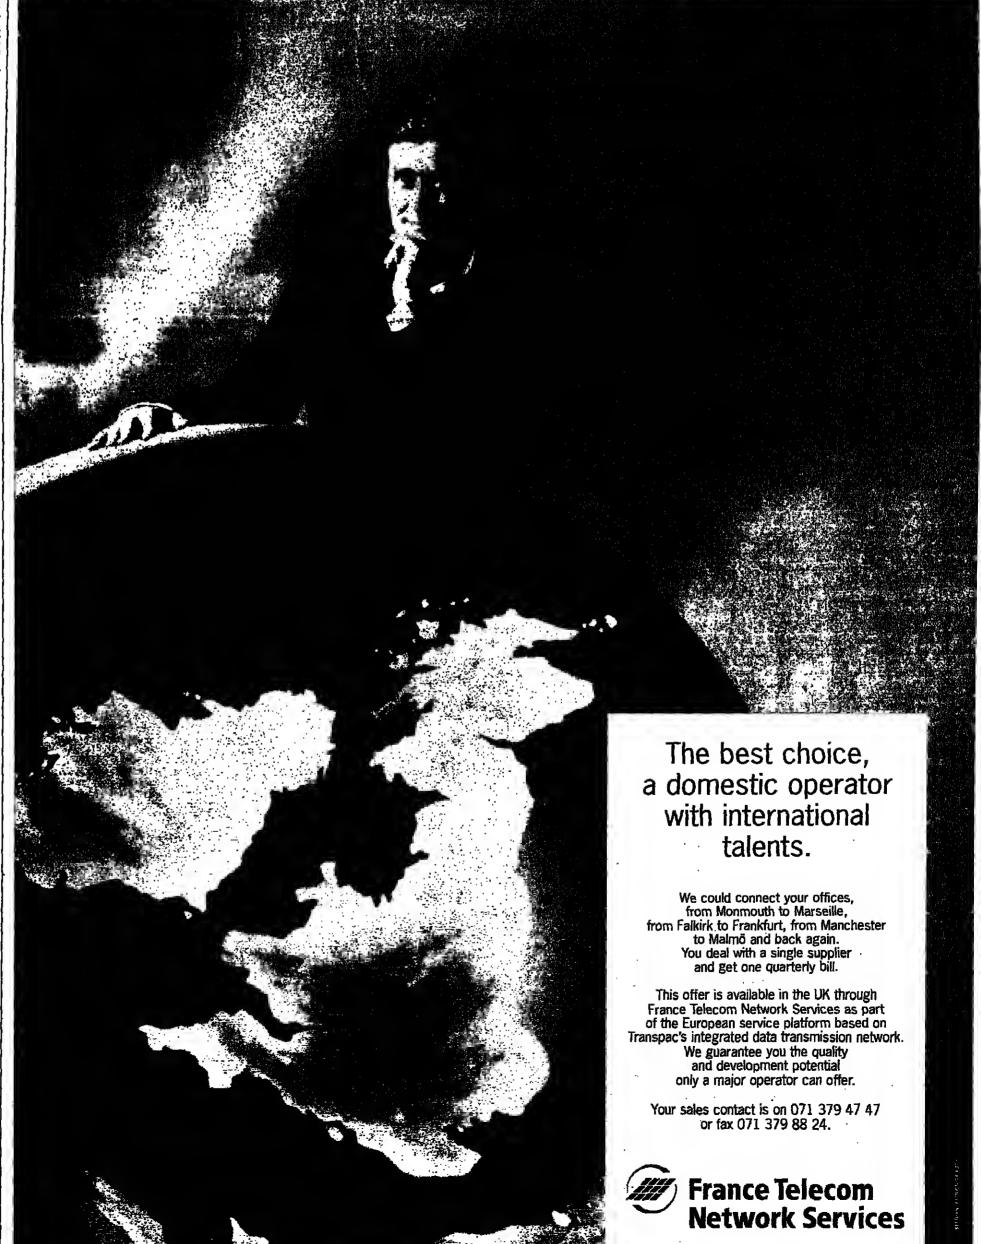

works to take fibre-optic Continued on page two

### A long road yet to 'superhighways'

Continued from page one:

cables to the kerb or even into the home - an immediate concern. Most of the main operators have built trunk fibre networks and are starting to extend fibre into the local loop; they are also at various stages in trials of interactive business and residential services, from networked personal computers to home shopping and video-on-demand.

Again, a dose of caution is needed. Very few inter-active services are currently available, Most national networks are not yet up to it; and where they are, the pricing of services such as video-oo-demand is highly problematic, particularly where existing alternatives - in that case renting videos from the local store are cheap and well-established

The "global village" is similarly inhibited by high crossborder telecoms rates. Sustained by the cartel of national operators which fixes the tariffs, international telecoms prices remain far higher than

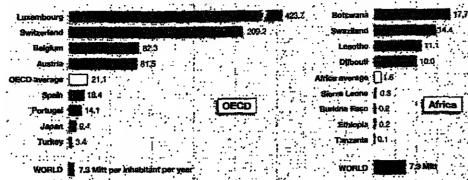

costs. The cartel is beginning to crumble in the face of liberalisation, the rise of new forms of competition, and the formation of global alliances of large telecoms operators aiming to offer "one-stop" services to multinationals. But until cross border prices come down to the level of national tariffs, Mr Gore's GII will encompass a fairly select band.

One of the most effective remedies for monopoly pricing is, of course, to abolish the monopoly. Across the developed world monopolies are in the process of being abolished. The UK. Sweden and New Zealand now have almost unrestrained telecoms competition: new operators are able to gain licences quickly and they are allowed to build their own

Elsewhere, liberalisation is proving a fraught endeavour. although the trend is unambiguous. In the US, Congress failed this year to reform the country's antiquated telecoms laws. The proposed legislation would have broken down the

The information rich and the information poor

Minutes of outgoing International Telephone Traffic (METT) per inhabitant in selected countries, 1991

and offering new prospects for telecoms growth in the devel-

barriers between "local" and "long-distance" networks, extending competition in one step and avoiding the heavy litigation which looks set to continue to be the prime vehicle for reshaping the US regulatory maze.

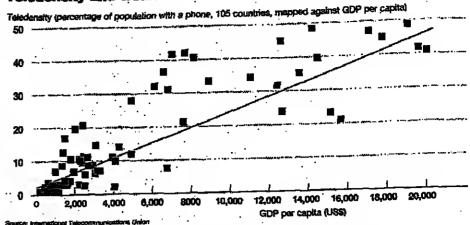

in Europe, where monopoly remains the rule for basic volce traffic, an orderly march to full competition is in prog-ress. The EU's 12 members have agreed to allow full competition in voice services by January 1998, and are close to agreeing to open up infrastructure within a similar timescale. Across most of the developed

world, competition is already entrenched in the fast-growing mobile communications sector, with the cellular phone on the threshold of becoming a mass consumer good. As it does so, operators are increasingly focusing on the potential for radio systems to replace loop. Such "fixed cellular" systems are set to provide lowcost local networks, dramatically cutting the investment required to provide networks in competition with those of existing fixed wire operators

oping world. Some believe that in the daveloped world the prospect of serious competition with radio operators for voice telephony traffic will drive existing fixed-wire operators to develop superhighway services fast, since the greater band width of fibre-optics will provide their main competitive edge over radio. Mr Jozef Cornu, technical director at Alcatel, the French equipment supplier, says: "In the battla between operators, those that go via radio will lack bandwidth, so those with fixed networks will be obliged to

develop multimedia services."

Teledensity and wealth

It is a plausible scenario, and further support for the "Negra ponte switch" - the notion developed by Mr Nicholas Negraponte, director of tha media laboratory at the Massachusetts Institute of Technol ogy, that services traditionally delivered by radio are set to switch to cable and vice versa. But once again, it does not describe the telecoms world

\*R.J.Saunders, J.J.Warford, B.Wellenius, \*Telecommunica tions and Economic Develop-ment," (second edition), Johns Hopkins University Press.

Low 'teledensity' of poorer countries

The chart (above, right) plots GDP per capita against the number of telephona lines per 100 people ('teledensity') for 105 countries, surveyed by the International Telecoms Union, Each square on the chart represents a country. Tha overwhelming concentration in the bottom left-hand comer reflects the very low teledensity in poorer

countries. Although the relationship between wealth and teledensity is drawn as a straight line, in fact it appears easier to increase teledensity for low income countries. According to the ITU, this suggests "that telecoms Investment brings higher social and economic rewards in low income countries than in high income countries, at least in terms of benefits per extra dollar spent."

European progress towards privatisation of telecoms

### Liberalisation is bound to accelerate the pace

Privatisation and liberalisation are opening up new worlds for Europe's former postal and telecom monopolies (PTTs), one where they have to compete to survive and are no longer tightly constrained by ministerial dictates, writes Andrew Adonis

nly a few years ago, three assump-tions governed the provision of telecommunications worldwide: that it was a natural monopoly, that it was a national utility, and that therefore it was best managed within the public sector.

Accordingly, state-owned PITs were the norm. Almost all of them were monopolies, many of them an integral part of their government's ministry of posts, and often managed in tandem with the national postal service. In the mid-1980s, the US and the UK struck out in a different direction. The break-up of AT&T in 1984 unleashed serious competition in the US long-distance market, while Margaret Thatcher's government in the UK sold off a minority stake in British Telecommunications in the same year, exposing BT to a loog-distance competitor, Mercury, which built its own network.

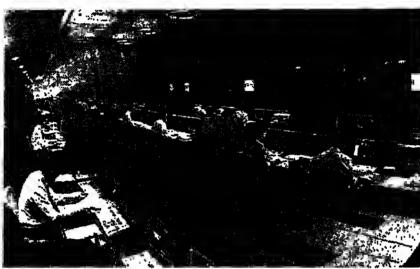

But the US and UK had few international imitators, and none of note in Europe. The US telecoms industry structure, with its divorce between local and long-distance carriers, was regarded as alien on the other side of the Atlantic; while Mrs Thatcher's passion for privatisatation was equally alien to her fellow European government leaders, And in the early years after BT's privatisation there was little to suggest that many people besides the company's shareholders, who benefited from an underpriced flotation. had gained much from the exercise.

A decade later, the picture is transformed. Most of Europe's PTTs are at some stage on the privatisation road. Each country is following its own distinctive path and some have as yet barely embarked on the course. But the following milestones are frequently encountered:

De-merger of the posts ministry and the PTF: This step has taken place in almost every European country. Posts and telecoms operations bave invariably been transferred to a state agency with a management board separate from, though appointed by, the sponsoring ministry.

☐ De-merger of posts and telecoms: This has taken place across most of western Europe. The rationale is two-fold: that posts and telecoms are now fundamentally different businesses, employing radically different technologies; and that telecoms is more suitable than posts for commercialisation and privatisation.

The Netherlands is a striking exception. KPN, the national operator, has retained posts and telecoms - and was privatised in that condition earlier this year. Some analysts say KPN is the exception which proves the rule, since the Dutch postal service is one of the few in Europe to run at a profit (one of the others is the UK's Royal Mail, which is also a candidate for privatisation). However, most analysts believe the two postal services to be profit-able in large part because they are com-mercial. KPN's postal division, in particu-

In Britain, Oftel, the telecoms regulator, has forced BT to reduce call charges. Pictured here is

Fresh calls for a 'market-driven revolution' in voice telephony services

success in exploiting the potential for competition in international mail delivery. Across the rest of Europe postal services are highly regulated, and face little external competition or pressure for reform. Whereas the EU is pressing hard on the liberalisation of telecoms, it has moved

more slowly on the postal side. ☐ Commercialisation: The next step after de-merger is generally the setting of commercial targets for the new stateowned telecoms company, and the granting of a degree of commercial freedom. Such freedom typically includes the right to form international alliances, plan

lar, has a Europe-wide reputation for its investments and manage resources without close ministerial supervision (in theory at least). In the case of Sweden, which has opened its telecoms market to full competition while leaving the state operator, Telia, in the public sector, the upshot is a company which in most respects except ownership resembles a private sector concern.

Is commercialisation an unstable halfway house between state monopoly and full privatisation with competition? Many British and American industrial economists believe so; and their verdict appears to be confirmed by European experience. The governments of France.

Germany and Italy all view their "commercial" telecoms companies as ripe for privatisation, and only fear of a serious trade union backlash has led the Balladur government to refrain from moving to privatisation at the same time as Germany and Italy do so.

The proposition is far from proven. Sweden's experience, in particular, suggests that the "dynamic" effects of privatisation can be secured by rigorous commercialisation, while continued state ownership is

not an inherent barrier to competition. Telia is also a leading member of Uni-source, one of the three new European telecoms alliances. However, were Unisource to wish to integrate its operations more fully by soma form of cross-ownership between its members, partial privati-sation of Telia would be unavoidable.

☐ Partial privatisation: In most countries with a privatised former PTT, the company is the largest on the local stock exchange. That fact alone explains why virtually all telecoms privatisations have been phased, although political factors have also weighed heavily.

All the EU telecoms privatisation carried through to date (UK, Denmark, Netherlands) have been - or are being carried through in stages. Typically, an initial sale of 30 per cent is followed by the

disposal of two further tranches.

In the UK, the process took nine years to complete. A similar course is planned with the largest of the forthcoming flotations, that of Deutsche Telekom, which is scheduled for 1996. Some of Europe's smaller PTTs, with less advanced networks, are considering the sale of strategic stakes to overseas partners as part of a partial privatisation. In January, Latvia sold such a

stake in its PTT to Cable & Wireless, the privatised UK international operator in return for a guaranteed \$160m of investment over three years, a consortium headed by C&W will take a 49 per cent stake in the company.

Greece and Belgium are considering strategic partnerships. Telecom Eireann, the Irish PTT, is looking for a strategic partner without privatisation, but analysts expect that any deal might pave the way to an eventual sell-off.

☐ Liberalisation: Privatisation does not necessitate immediate liberalisation, as the experience of Singapore, Denmark and the Netherlands shows. But liberalisation tends to follow fairly soon, if not at the outset, for two reasons:

First, because governments, once they are regulators rather than providers of telecoms, become more consumer-oriented. Second, because of political concerns about the straight conversion of a public monopoly into a private monopoly.

In Europe another force is at work - the EU's 1998 deadline for the opening up of voice services to competition. The imminence of liberalisation is bound to accelerate the pace of progress towards privatisation, where it has not already happened.

☐ Restructuring: Privatisation and liberalisation open up a new world for the former PTT, one where they have to compete to survive and are no longer tightly constrained by ministerial dictates.

Internal restructuring, including severe cost-cutting programmes, almost inevita-bly follow, although they are also taking place within state-owned PTTs. The degree of change depends largely upon the degree to which commercialisation had previ-

The sceptics over European liberalisation are now in fast retreat, reports Andrew Adonis

hen, after much anguish, the European Union's telecommunications ministers finally agreed in June 1993 to liberalise the EU's voice telephony market, full competition in Europe's telecommunications services market still seemed a distant prospect.

The date agreed by the min-isters for the liberalisation of basic voice services - January 1 1998 - was still nearly five years away. Five of the EU's 12 member states gained exemptions allowing them to keep out competition for longer still - Greece, Spain, Portugal and bourg until 2000. And, with regulatory structures and inter-connection regimes nonexistent across most of the EU, many believed that a few years could be added to those dates before effective competition would be a reality. The sceptics and far-distance

gazers are now in fast retreat.

European Union horizons draw closer Although little has formally changed since the ministerial agreement, it appears increasingly likely that liberalisation will come sooner rather than later and that effective compe-

tition will follow hard on its

time which has changed per-ceptions. Other forces are serving to accelerate the pace of liberalisation and intensify the commitment of EU member governments to the cause of early competition in telecoms

services.
The three strongest forces are the European Commission, the impact of existing liberalis-ation on unliberalised sectors, and the rise of international alliances between telecoms operators. The three are complementary and mutually rein-

The commission has been forcefully promoting telecoms liberalisation - in public and

Europe, Middle East and Africa, Tel: 44 (0) 633 413602. America, Tel: 1 703 834-3600. Asia Pacific, Tel: 1 613 591-3600.

by stealth. Trans-European networks featured prominently in the Maastricht Treaty. And from Jacques Delors downwards, the commission has spent the last few years warning of the damage to European competitiveness if Europe fails to construct telecoms "superbighways" to match those being developed in the US and

initially, such rhetoric was often accompanied by sugges-tions that significant public investment - either by the EU
or member-states - should be
devoted to upgrading telecoms
networks. The commission soon saw that such a statist approach was neither necessary nor desirable. It was unnecessary because the telecoms industry is itself awasb with funds to devote to commercial projects; and undesirable because leading analysts and some operators - notably the main US telecoms opera-

tors and British Telecommunications, the privatised UK operator - convinced policy. makers that a far better way of boosting the development and take-up of new services was to abolish monopolies and allow competition to exert strong downward pressure on prices.

mature statement of this new approach is encap-solated in the "global information society" report of the EU-wide industry group chaired by Mr Martin Bange-mann, the industry commis-

Published in May, and broadly endorsed by EU heads of government sbortly afterwards, the Bangemann report put superhighways at the beart of Europe's future competitive-ness. It called for a "market-driven revolution" to make them a reality; and to precipitate the revolution it recommended that EU governments "accelerate the ongoing pro-cess of telecoms liberalisation". The Bangemann report highlighted telecoms infrastructure not just services, as ripe for liberalisation, citing such liberalisation as part of the "urgent action" needed to reduce high cross-border tar-

With a head of steam behind

the Bangemann report, the commission has lost no time in pressing forward. in July it published an "action plan". The title of the first chapter -Towards a Competitive Environment" - sums up the action envisaged. The rest of the paper listed the regulatory and legal obstacles remaining to be overcome, and a framework for

The next key stage is a Green Paper on infrastructure competition, expected next month, which appears likely to recommend liberalisation on a rolling basis so that competing

systems can be opened at the same time as the services to be carried over them are opened to competition. In practice, this means infrastructure competi-tion across most of the sector by 1998, with investments targeted at private corporate net-works permissible at once.

The commission is also drafting a directive on inter-connection, likely to be published early next year, and is putting its weight behind other practical initiatives such as a "onestop shop" for companies seeking operating licences across

It will not be a smooth transition. Just as they opposed services liberalisation, several EU governments – notably Spain's – are fighting hard to delay infrastructure liberalisation. Their only plausible argument is that decisions on infrastructure should not be taken before the precise terms of services competition are agreed.

But even that line has infuri-ated Mr Karel Van Miert, EU commissioner responsible for competition policy, who has hinted darkly about using "special powers" to promote infrastructure competition if agreement is not reached at the telecoms ministers' council in November.

By stealth, the Commission bas been doing its best to broaden the scope of competi-tion allowed within existing rules. For instance, it has given strong encouragement to the EVUA, a grouping of more than 30 multinationals which is contracting jointly for a Europe-wide "private" network to secure cheaper prices and enhanced functionality.

Some operators question whather the EVUA network counts as "private", but the Commission has voiced no doubts. Most of the leading telecoms European operators bid for the contract, and the

EVUA estimates that the trial contracts awarded so far could offer savings of up to 40 per cent on existing pan-European

The EU's operators are fast waking up to the implications. Although most of them remain state-owned monopolles, they realise that they must either adapt to competition or lose significant segments of their business within a short period. Their experience in the cellular mobile field, where competeting providers are now entrenched over much of the EU, has been a salutary warning to them.

Tha prospect of privatisation, now sweeping across the continent, is underlining it. As the more reflective of the PTT chiefs realise, privatisation is a body blow to monopoly. The government immediately switches from being owner to being regulator, radically changing its relationship with the PTT; and since private monopolies are harder to defend than public monopolies, It also increases the pressure for rapid liberalisation in the run-up to any sell-off, or in the wake of it. In the Netherlands.

Worldwide demand for cellular mobile communications

### Close to 50 million users already

in Europe, the Global System for Mobile Communications - GSM for short - has become the driving force behind the growth of cellular subscriptions worldwide, reports Mark Newman

urope tends to borrow most of its ideas about telecommunications products and services from

North America. But in mobile communications, Europe bas seized the initiative and US companies are doing the unthinkable they are giving some serious thought to importing a European-developed technology. The pan-European GSM digi-

tal cellular telephone standard has been adopted by every country in western Europe. GSM is likely to be used across the whole of eastern Europe and is already emerging as the dominant technology in Asia and North Africa.

Since the first GSM telephones were produced in the summer of 1992, more than three million people, most of them in western Europe, have signed up to GSM services.

There are almost twice as many cellular telephone subscribers in the US as in the whole of western Europe. If current growth levels are maintained, there will be 22m US cellular subscribers and 13m European subscribers by the end of this year. The worldwide cellular population will be close to 50m.

But while more than half of the European growth this year will be derived from new connections to GSM digital cellu-

lar systems. US growth is accounted for almost exclusively hy connections to analogue Amps networks which are close to reaching full

A number of operators have upgraded their networks to offer digital services, but there is little or no customer interest hecause telephones are more expensive and coverage levels are inferior.

US celiular operators will face competition in 1995 or 1996 from personal communications service (PCS) companies. They will use high frequencies at a similar part of the spectrum to those allocated to the UK cellular operators, Mercury One-2-One and Orange, and E-Plus in Germany. But they have to decide whether to use the same standard as the European oper ators, or a standard that is developed in the US.

There is every chance that they will choose the European standard - which is based on GSM - because it is a proven technology, and because manufacturers can guarantee prompt delivery and are beginning to derive the economies of scale to make PCS handsets cheap enough to compete with the analogue networks.

"There is an awful lot of interest in DCS 1800," acknowledges Dale Hatfied, the managing director of US telecommunications consultancy Hatfield

There will be three PCS licensees in each region and DCS 1800 would be an attractive cholce of technology because it gives an operator the opportunity to beat its competitors to the market -"with all the PCS licences that are being issued, there is a hig advantage in being first to the market," says the consultancy.

It believes that, in the longer term, spread spectrum technology, developed by US company Qualcomm, could emerge as the optimal digital cellular standard. But the handset technology is still under development, and a PCS operator which chooses spread spectrum technology risks being left behind in the race to build

new networks. While the whole of Europe is migrating from analogue cellular to digital GSM over a period of two to three years, the US cellular industry is pulling in a number of different directions and away from a standardised technical approach - "we have chaos

US celfular operators may well choose the European standard which is based on GSM - because it has a proven technology record

over here in the US," observes Hatfield.

But Europe has not always acted in such a unified manner: before GSM, cellular telephone networks in Europe operated to a number of different standards. Germany and France, for example, chose technologies which were unique to their markets.

It was this disharmony and the licensing of competing operators - rather than the merits of the GSM standard which has helped to make GSM such a significant success for

When the two German GSM networks, D1 and D2, launched in June 1992, the old Deutsche Telekom C-Netz analogue network was creaking under the

weight of new subscriptions. The quality of the service was very low by US standards and handsets Were even more expensive than the new GSM telephones.

Germany, therefore, became the focus of attention for GSM equipment manufacturers. If Germany had not provided the impetus to get GSM off the ground, Europe could have experienced the same sort of difficulties in engineering the market to upgrade to digital services as the US.

GSM also owes its success to the opening up of European markets to competition. Most countries in Europe retained monopolies until the GSM standard was developed. The licensing of competitors co-incided with the arrival of GSM, resulting in a massive surge in demand for cellular

The number of cellular subscribers in western Europe. which had grown by roughly a third in each of the two previous years, increased by 47 per cent in 1993.

The successful launch in Europe helped GSM to make the transition from a European to a global standard. Asia, in particular, has turned to GSM as a successor to analogue networks, many of which are close to full capacity. In Hong Kong, GSM is now capturing the majority of new

subscriptions, largely because GSM handsets are 25 per cent cheaper than analogue models. GSM services have also been launched, or networks are heing huilt, in Australia, China, Indonesia, Malaysia, the Philippines and Cambodia.

GSM is also emerging as the favoured standard in Africa where many countries have no previous experience of callular

Mobile Telephone Network and Vodacom, launched GSM services in South Africa in June and already share more than 100,000 subscribers. The whole of North Africa is also adopting GSML

A rapid fall in the price of cellular telephones has been a big factor in the success of GSM. When services were first launched in northern Europe in 1992, the wholesale price of telephone was between £600 and £1,000. This did not matter in Germany, where telephones for the old C-Nets service were even more expensive.

But in the UK, where retailers were already selling handportable telephones for the Tacs analogue networks for less than £100, GSM could not But since 1992, the wholesale

price of GSM telephones has fallen to £250 for a bottom-ofthe range model, to around \$500 for a pocket telephone. Dealers heavily discount the price of telephones because they receive cash bonuses for each new subscriber they connect to their network. In Germany and the UK, these bonuses are so large that some dealers are giving away tele-phones provided that the subscriber signs up to a service for a minimum period.

GSM is proving a remarkable success for the western European telecommunications sector. It has become the driving force behind the growth of cellular subscriptions worldwide and is now threatening to make an impact in the US, the world's biggest cellular mar-

Supplier profile: Siemens faces a challenge as rivals move ahead on prices and technology

### German telecoms giant roused by call of the new

he German industrial group Siemens is facing challenges in one of its strongest areas: telecommunications. It remains one of the world's telecoms leaders, with equipment ranging from multi-million-dollar telephone switching systems to mobile phones representing nearly a quarter of its DM81.6bm sales last year. Bot there are threats to the groop from three sources: privatisation,

recession and technology. Until about four years ago, Germany's state-owned telecoms monopoly, Dentsche Telekom, bonght much of its switching and transmission did not drive too hard a bargain over price - "it was a cosy arrangement between PTF and domestic supplier." says Mr Jeremy Ledger. telecoms analyst at Dataquest. But it was an arrangement that could not last, as the experience of other countries

proved. By the late 1980s, Britisb privatised UK operator, was adopting more open procurement policies, as were Vodafone and Mercury. newly-licensed competitors in the UK mobile and long-distance sectors

respectively. Siemens was not a speciator on the UK scene: m 1989 it bought a 40 per cent stake in GPT, the GEC telecoms equipment subsidiary and one of BT's principal suppliers. But it was not under the same pressure at bome. Indeed, the fall of the Berlin Wall in November 1989 led to an Indian summer for the old regime in the form of a DM60bn Dentsche Telekom programme to npgrade eastern Germany's antiquated phone

Dr Erwin Hardt, head of Siemens' public communication networks groop, rejects accusations by North American suppliers that Deutsche Telekom pays - or paid - np to four times the going international rate for its network equipment - "they are not comparing like with like," he insists. "Our prices typically include associated software, while US operators pay for software on top. Take the two together, and our prices are about the same." However, Dr Hardt admits

that the Indian summer is

The European recession was intensified for Siemens by a drop in orders from eastern Germany and by the growing impact of privatisation as operators far beyond Britain began putting unprecedented price pressure on their

Dentsche Telekom was one of them. Again, the figures are in dispute. Dr Hardt says that prices for transmission and witching equipment have fallen, in real terms, by about

Heinrich von Pierer, chairman of Siemens: a strong commitment to research and development

7 per cent in each of the last three years, and "somewhat more" in Germany. Dataquest's Mr Jeremy Ledger says that prices for key transmission products have fallen in Germany by as much as 20 per cent over the past year as Deutsche Telekom has awarded large orders abroad.

Either way, the trend is alarming for Siemens. Last year it reported a fall in new orders and looks on nervously as Alcatel of France - which bas a substantial German telecoms business - repeatedly downgrades its profit forecasts. Few question the strength of many of Siemens' product ranges, notably its EWSD switching system, or its commitment to research and development, which accounts for some 15 per cent of sales in nications divisions. But alone they are not enough to sustain margins and

guarantee market share. Then there is the question of new technology, notably the burgeoning demand for mobile communications. Both Alcatel

and Siemens have been dramatically ontclassed in the market for cellular infrastructure and handsets by two smaller European suppliers, Ericsson of Sweden and Nokia of Finland. Motorola, the US electronics group, also has a significant European presence in the mobile sector, where it is a

leading handset supplier. Dr Hardt claims that the Scandinavian suppliers were "lucky" that the cellular boom started in the Nordic states "where all those isolated summer homes created an instant demand." He is convinced that Siemen "greater and superior" R&D, particularly in the switching technologies where a number of cellular suppliers are weak," will triumph

Yet Dr Dietrich Botsch, of Siemens' private communications systems group, recognises the scale of the task facing the group if it is to establish itself as a leading mobile communications force: "We missed out on the analogue developments in the cellular field, but are concentrating our resources on new digital GSM systems. We believe we can generate the volumes that

Siemens is also attacking Its

will make us a serious

contender.'

high cost base. It has just ened a software bouse in India, where overheads are significantly lower, and plans to employ 1,000 programmers within three years. Within Germany, moves are afoot to introduce seven-day working "Our unions now realise that such steps are important to productivity," says Dr Botsch. Then there is marketing. Like the rest of the telecoms industry. Siemens has bad marketing thrust upon it. The telecoms divisions now emplo more than 300 marketing staff where five years ago there were 15. Although two-thirds are engineers by training. their career development and skills are fundamentally

different from the mono engineers of old. "It used to take two years to get from a first idea to a finished telephone," says Dr Botscb. "Now it takes six months. Two years is the entire life-cycle."

# There's no such thing as a general solution

When you're building or upgrading an international business telecommunications network which includes Japan, it is simply not true that a system tailored closely to your individual needs must be more expensive than an 'off-theshelf solution. To prove it, talk to us.

We are Japan's largest international telecommunications organization, and one of the foremost operators worldwide. We have capital investment and capacity rights in most international cable developments, and play a leading role in laying and managing cable systems throughout the Pacific region.

All of which means that we have the resources, experience, professionalism and technology to meet your needs. And not only in Japan. Our world-wide service support network of twenty-four offices includes no fewer than seven in Europe, of which three - Belgium, Germany and the UK - are locally

We will work with you not merely as consultants, but as true business partners, analysing your traffic volume and expenditure to create a system designed precisely to meet your particular needs. In our experience, this process not only increases efficiency, but also saves you money.

We can belp with hardware, too, through our international subsidiary Telecomet, which provides and maintains customer equipment throughout the world. Another subsidiary, Telehouse, provides advanced customer operations facilities in both the UK and the USA.

So when cost control is as important as capability, isn't it nice to know that, with KDD, you can have it both ways?

No two solutions are the same

Tony Jackson on the bottlenecks facing legislation on deregulation

### **US** monopolies under attack

he liberalisation of US telecoms is a war conducted on a number of fronts: in Congress, in the courts, in state legislatures and in regulatory agencies. The significance of the bill which collapsed last month in the US Senate lay in its attempt to draw the various strands together, its failure means that, for the time being, the deregulation process reverts to a state of apparent chaos.

However, there are certain basic principles at work. The regulatory harriers at issue are simple enough; long-distance telephone companies may not operate in local markets, and vice versa; telephone companies may not operate cable networks; and regional telephone companies may not manufacture telephone equipment. There is general agreement that the first two, at least, should be scrapped or modified. The accument is over the

For the government, this involves a familiar type of trade-off. The Clinton administration gives a high priority to the construction of a digital super-highway, capable of delivering voice, image and data or homes and businesses throughout the US. This can only be done with private sector money. But, as long as companies are barred by regulation from roaming the superhighway at will, they will be the less ready to invest.

Before setting all companies free to compete across the network, however, the goveroment is obliged in fairness to ensure they compete on equal terms. The snag is that while long distance telephone companies compete with each other, as do cable companies. regional telephone companies - the so-called "Baby Bells" do not. They are still safe, immensely profitable monopolies; and as such they form the chief bottleneck in the deregu-

lation process.

In tackling this problem, the authorities face another famillar trade-off. As in other countries, the regional companies are obliged by statute to provide a universal service to the

of around \$2bn.

public. Their quid pro quo for this is the monopoly: for if competitors were given free access to the market, their natural inclination would be to poach business in lucrative urhan areas and leave the original companies to lose money supplying telephone servires to remote towns and villages.

Various schemes have been proposed to get round this, the most popular being a "play or pay" system whereby all competitors in a local market would contribute to a central fund from which loss-making services could be funded. In the meantime, however, the local monopolies remain hugely profitable. As a result, it looks as if the regional companies will not surrender their monopoly status until they are

This point was brought home by the collapse of the telecoms bill last montb. The regional companies were offered access to the long-distance market in exchange for loosening their local monopolies. According to Mr Royce Holland, president of MFS Communications and a vocal critic of the regionals, this ultimately led them to kill

"Some of them were more in favour of the bill than others," be says. "But It came down to an issue of whether they would

the AT&T-McCaw merger. The combination of America's biggest long-distance phone company and its biggest mobile phone operator means the old nation-wide phone system ls recreated at the cellular level. The deal has, of course, been bitterly opposed by the regional companies, but their chances of blocking it in the courts seem slim.

To add to their problems, the government has decided that the present system of cellular licences - whereby the regional companies plus one competitor apiece are allowed to run regional duopolies - is not competitive enough. Towards the end of the year a clutch of hroad-spectrum licences known as personal communication services (PCS) licences will be auctioned off to the bighest bldder. There is already speculation that the bidding process will force alli-ances throughout the industry. the result being further pressure on the regional incumbents.

Not that the regional companies are incapable of looking after themselves in other respects. Most of them are conducting court cases to overturn the ban on them owning cable companies, and the industry gives them a reasonable chance of success. More speculatively, they are bringing a collective action seeking to overturn the ban on them entering the long-distance market. If this comes to anything which seems on balance unlikely - it will take 18 months to come to fruition.

By that time, the odds are that this year's failed telecoms bill will have been revived. The regional companies are under fire for having blocked It, and a number of influential sena tors are reportedly very cross. Informed observers who bad bet against the blll going through this year are now betting on its passage next time. But, whatever form the legislation finally takes, its task will merely be to tidy things up and hurry them along. The momen turn for change in the industry

will carry on regardless.

Call charges fall for fixed and mobile communications

### New services abound for businesses in the UK

It could be argued that the success of competition in the UK has strengthened the case for telecoms liberalisation across Europe, writes Paul Taylor

ompetition and new technologies have transformed the shape of telecommunications in Britain in the ten years since British Telecommunications was privatised. New network operators and service providers have entered the market and prices for both fixed and mobile services are tumbling.
Oftel, the UK teleroms regu-

lator, has forced BT to bring its call charges down sharply to reflect the falling cost of delivering calls as new technology cuts overheads. The latest price reductions announced by BT early last month mean that, in real terms. UK long-distance calls are barely a third of the cost a decade ago.

Meanwhile, a new hand of telecom companies have appeared providing specialist value added network services (Vans) such as electronic digital interchange (EDI) and electronic mail. Others, many of them with foreign parents, are building advanced digital networks, including some dedicated to mobile data. As basic voice telephony services become more of a commodity Item, "re-sellers" leasing spare capacity and repackaging it at knock-down prices, have begun

to appear. In cellular mobile telecommunications. consumers in some parts of Britain can now choose from an array of com-peting tariff structures offered by four competing network operators on four digital and two older analogue networks. Other competitors offer mobile services over public access

Mercury has captured about a quarter of the large business market and two-thirds of the City of London's outgoing traffic

works.

mobile radio and satellite-based networks. All this has been achieved against the backdrop of government policy which has turned the UK into the most liberalised telecoms regime in Europe and in some areas - for example, cable telephony - made Britain a test-

bed for the world. The privatisation of BT and the licensing of Mercury Communications, a subsidiary of Cable Wireless in 1984 to build a competing national network, heralded a period of unprece-dented change in the UK telecoms industry.

Ten years later, BT still boasts a 90 per sbare of the total market for telecoms services in the UK, and according to most projections, will only loosen its grip by a few percentage points a year. Nevertheless, business customers in particular can now select an ever-wider range of telecommunications services from a growing number of vendors.

Mercury has captured about a quarter of the large business market and about two-thirds of the City of London's outgoing traffic. Mercury - which ini-tially competed primarily on price - is. however, now facing tougher competition from a leaner, more aggressive BT. and from new entrants pursuing the lucrative husiness mar-

sprung up in the past three years since the government decided to end the BT/Mercury long distance duopoly and announced its willingness to license new public operators, either building their own networks or reselling services provided over existing networks. At the same time, the government went one step further and became the first country

in the world to allow cable companies with franchises in urban areas, to build combined TV and telephony networks -thus providing direct competition in the "local loop." In order to give the cable

network builders a head start. BT was banned from offering entertainment services over its telecoms network for a decade. As a result, cable companies -many US-owned - have piled into the UK market attracted hy the prospect of a double income stream. Where new cable network operators have offered telephony services, the take-up in some areas has been running at more than 50 per

able franchises have so far installed over 500,000 telephone lines in more than 30 areas and the Cable Television Association bas forecast that exchange line connections will rise to more than 700,000 by the end of this year. Although this still only represents a small dent in BT's dominance of the residential market. BT bas nevertheless felt the need to counter-attack by sending "win-back" teams into areas targeted by the cable companies Nevertheless, Dataquest, the

market research organisation, forecasts that business and residential customers for cable telephony will be renting 1.5m telephone lines out of a total of 29.3m on the public switched lelephone network in 1997, representing five per cent of the market

By the turn of the century, Barclays de Zoete Wedd analysts suggest cable could be costing BT up to £1bn a year in lost revenues. BT is expected to recoup some of that lost revenue in charges for linking cable systems into its trunk network, but it will be compet-ing for business with Mercury and other new long-distance telephone companies

Sinre 1991, more than 40 new operators have been lirensed to provide telecoms services in the UK. Most of the licenses are for specialised or regional services but some, including a license awarded to Energis, a

subsidiary of the National Grid, are for national net-

Energis, which began operations in June, has built a 3,500km nationwide optical-fibre network using National Grid's pylous. Last month, Energis announced that it was teaming up with Colt, which provides local network services in London, to provide seamless national telecom services. Colt has 55km of fibre network installed around the City of London, serving nearly 170 buildings and bas also extended its network into Westminster and Docklands.

Colt is one of three new operators now building their own infrastructure in the City spe-cifically to serve the corporate sector. Another, MFS which was launched in March this year, offers free line-rental to customers with bills of £600 or more per line per year. Its fibre network covers most of the City and Docklands and is being extended to Southwark and Westminster.

he City has also attracted a growing array of re-sell-ers - operators leasing capacity from others and reselling it at a discount to standard tariffs, often providing their own switching facilities and direct links to customer premises. Three US groups. and Esprit, a private UK-based operator, are the among the most prominent re-sellers.

The re-sellers concentrate on international traffic, but most also offer a re-sale service within the UK. Worldcom, which set up in London in 1991 and aims to undercut Mercury business prices by between 10 and 15 per cent, now has more than 250 business customers and claims to have cornered nearly three per cent of the UK's outgoing international telecoms traffic.

Competition is not, however,

limited to fixed-line services. Britain's cellular telephone industry is amongst the most developed and competitive in Europe.

In the UK, the government seized upon the adveut of cellular telephony in the early 1980s to further foster competition. From the outset, two cellular operators were licensed and BT was only allowed to take a 60 per cent stake in one of them.

The government's aggressive policy towards competition has not always worked, bowever -Telepoint services such as Hutchison Telecom's ill-fated Rahbit network, based on digital cordless telephony, proved to be a business flop in the early 1990s despite the financial backing of international consortia.

Similarly, only two Personal Communications Networks (PCN) systems bave been built, although four licenses were originally awarded. Nevertbeless, most analysts agree that the UK's cellular mobile telephone network strategy has been effective in stimulating subscriber growth and effective price competition.

The UK now has four cellular network operators with 2.6m subscribers between tbem: Vodafone, launched as a subsidiary of Racal Electronics but de-merged in 1991: Cellnet. a joint venture between BT and Securicor, Mercury One-2-One, a joint venture between Mercury and US West, one of the US regional Bell companies; and Orange, whose largest shareholder is Hutchison Whampoa, the Hong Kong con-

Vodafone and Celinet, the original competitors, both have analogue and digital GSM networks, while One-2-One. launched last year, and Orange, which was launched earlier this year, were the first PCN networks in the world.

Fueled by falling handset prices, aggressive marketing and tumbling tariffs, these cellular services have proved increasingly popular with net new connections to mobile net-works overtaking fixed network connections to BT and the cable TV companies for the first time last December.

One-2-One has been particularly bold, offering residential customers free off-peak calls in an effort to broaden the base of mobile subscribers, while Orange's strategy has been directed more towards business customers.

As with fixed telecoms, there is little doubt that competition between rellular operators has helped bring prices down for the first time, broadened the range of services on offer and helped encourage subscriber growth. Perhaps, more contentiously, the success of competition in the UK, has strengthened the case for telecoms liberalisation across Europe.

■he past few years have been a tumultuous time for the more than 210,000 employees of NTT. Japan's huge telecommunications com-

Just under a decade since it was privatised. NTT has had to embark on a wide-ranging restructuring effort, fight a fierce battle against newcomers in the profitable long-distance market and venture for the first time in its history outside the domestic telecommunications business into the 'unknown world' of multimedia.

But if the past few years of frenetic activity at NTT have unsettled its employees, more accustomed to the bureaucratic ways of the former monopoly, the years ahead promise to be even more turhu-

Next year, the Japanese government is expected to make a long-overdue decision on the future of NTT, which is still over 65 per cent owned by the finance ministry. They are scheduled to conduct a telecoors review which will have implications far beyond NTT's own operations and is likely to change the shape of Japan's telecommunications industry in the years to come.

s in many other industrialised countries, the Japanese government faces a pressing need to review the regulatory environment surrounding its telecoms sector and to draw up a vision of what the industry should look like in the 21st century.

Although Japan was relatively early in deregulating its JAPAN

### Further turbulence ahead

vatisation of NTT in 1985, the measures it adopted back then were half-baked. Rather than hreak up the former telecoms monopoly into separate regional or business entities, the Japanese authorities preserved NTT as a dominant operator with national coverage and introduced competition only into the domestic long-distance and cellular markets. NTT was kept in control of the crucial local network.

While the Ministry of Posts and Telecommunications made it known on reviewing NTT's status in 1990 that It favours breaking up NTT, the decision was deferred for five years.

The result of the authorities' decision to allow only partial deregulation of the telecoms sector so far has been that almost ten years after NTT was privatised, the Japanese market suffers from the adverse effects of a lack of competition.

The price of telecom services in Japan, from simple phone calls to more value-added services, is still relatively high, particularly for long-distance calls, compared with what is charged in more liberalised

The tight regulatory environment and the lack of competition has stunted the development of new services, which are expected to play an important role in stimulating future economic development.

The experience in the cellular market has been somewhat different, with a second phase of liberalisation in April this year stimulating greater competition and rapid growth. However, even in the relatively open cellular market penetration is low compared with many countries in the west

munity new Japan's busin ands increasingly advan com services, but a traditionally tight regu environment has held back the

pment of new services

due to high user charges. Tokyo's telecommunications authorities have indicated recently that they are in favour of further deregulation of the market in preparation

for the much more expanded information industry extending from telecoms to computer communications and broadcasting that is expected to emerge within the next decade or so, As the deadline approaches for the Japanese authorities to

make a long-term decision on NTT and the future of telecommunications in Japan, and as it has become increasingly evident that the US is leading the way in building an advanced information society, the MPT has appeared increasingly

the industry, not only to catch up with the US but to ensure the country's future economic and social well-being.

Mr Shun Oide, Japan's Minister of Posts and Telecommunications, emphasised the importance that telecoms is expected to play in the country's future development in addressing a gathering of international telecoms ministers in Kyoto last month.

Japan faces various difficult issues, such as dealing with the unprecedented ageing of its society, rectifying the excessive centralisation upon Tokyo, converting the framework of industry and employment to create products and services with high added value through effective use of knowledge and skill, and realising life-styles for our citizens which bring both comfort and an enhanced spiritual quality of life. Mr Olde says. These issues "can no longer

he solved with the conventional methods of industria-lised society." he notes. "Instead, we believe that an approach through information networks, allowing the hest use of information and expertise is essential .

Telecommunications. together with other forms of information transmission, and the future multimedia services they will provide, are also expected to become a key source of economic activity.

The MPT estimates that with an advanced telecommunications infrastructure in place. the multimedia market will grow to a leading industry with a value of Y123 trillion yen and creating 2.43m new jobs by 2010.

Sucb considerations will form the basis for the authori-

ties' decision next year on the fate of NTT and the future of Japan's telecoms industry.

It has become increasingly clear to the authorities that deregulation and greater competition are crucial in preparing the Japanese telecoms industry for future growth. In recent statements, the MPT has indicated that it is looking to the CATV companies to provide further competition to telecom operators.

"It is important to establish the fibre-optic network efficiently through the competition of private companies. The telecommunications carriers and CATV operators are expected to build networks competitively." a recent MPT report

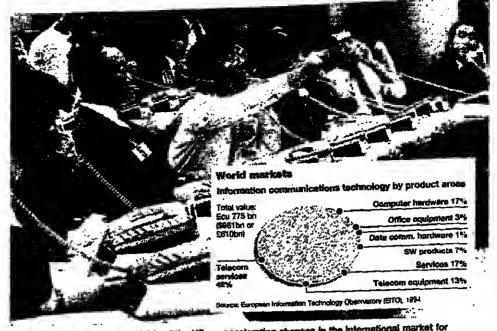

However, the need to nurture a strong information industry in many ways complicates matters.

If greater competition in the market were the only goal, there would be a strong case for breaking up NTT, a step the telecommunications ministry has long favoured.

Thile competition on some vital intra-city lines has been heated. with three new common carriers taking over 50 per cent of traffic on the important Tokyo-Osaka line, the three long-distance carriers' share of the intra-prefectural market last year was just 29 per cent.

NTT has been able to keep a tight grip on the long-distance market through its monopoly on local lines which, in effect, has allowed it to control access charges and gain information on its competitors' costs.

The minimum pre-requisite for the three new common carriers' entry into the

nic changes outside of the US are accelerating changes in the international market for informational communications technology, according to reports by the European Information Technology Observatory. These changes include the maturation of the multi-systems market, the falling prices for person computers, and the shift from building budgets around new hardware to focusing on software and services.

long-distance market was the breaking up of NTT into long distance and local husinesses," said Mr Kazuo Inamori, president of Kyocera and chairman of DDL in a recent interview. However, plans to build an advanced information industry have brought other

considerations into the picture. While competition is impor-tant in stimulating new developments, the huge investment required and wide-ranging husiness territory to be covered by communications operators calls for large, integrated companies to support the infor-

mation industry. As Mr Masashi Kojima, president of NTT, argues: "Telecommunications companies from now on will provide a full range of services from telephone and fax to personal com-puter communications and cable television. Competition in future will be between large companies and there will be very little room for companies of the market." Rather than breaking up

NTT - a move that would create smaller companies which would be less competitive in the global multimedia rece tha authorities should work towards integrating smaller companies into a larger company that can offer a full range of services, Mr Kojima asserts.

NTT, which has already converted trunk lines to optic fibre, also believes it is the only company that is capable of building Japan's super highway infrastructure singlehandadly. Breaking the company up, as the MPT envisions, would weaken its ability to do

so, the company argues. The growing view among industry watchers is that despite arguments against divestiture, there is a strong chance the MPT will in the end follow its initial instincts and break up NTT at least into separate long-distance and local

than can only compete in parts businesses. The impact of such a move, combined with deregulation of the CATV industry announced this year, is expected to stimulate the develop ment of Japan's telecom and cable industries into the information industry of the future.

Increased competition from cable operators provided an incentive for the US Regional Bell Operating Companies to modernise their networks to provide advanced communications capabilities, which in turn, helped them to improve profit margins, notes Mr Dargan at S.G. Warburg.

Greater competition upon divestiture could also encourage the MPT to relax rules which currently restrict NTT from offering cable TV and other services. Mr Dargan points out.

When that happens, Japan will move one step closer to the US in building companies that can offer the public a full range of multimedia services.

INFORMATION 'SUPERHIGHWAYS'

### The debate intensifies

Superhighways are flavour of the month with politicians and techno-buffs alike. But while they attract public attention with promises of science fiction-type services, they are also a target for cynics who question their commercial viability,

writes Monica Horten

he debate is hotting up over new superhighways -telecommunications networks that will carry multi-media services to homes and businesses. The issues are whether or not these superhighways should be laid automatically in every town, viliage and street, whether or not there is a return on the investment - or whether they should only go

where they are profitable. The telephone companies want to be free to develop the superhighway according to commencial demand. But politically, they are under pressure to ensure that all members of the population, rich and poor, rural and urban, have equal epportunity to access it. Information is a now a commodity. and people would be disadvanlaced by not having access to

In the UK, the Liberal Democrat leader Paddy Ashdown said recently that he feared a society of "information haves and have nots." The information super-highway could he used to widen the gap between rich and poor, between the affluent urban areas and remote village communities. And US vice president Al Gore laid down in his original proposal for the National Information Infrastructure (the official name for the US superbighways that the information superhighway must he accessible to all people everywhere,

The superhighways will be constructed from fibre optic cable because fibre has the necessary capacity for transmitting multimedia services. Fibre can carry data at speeds up to 2 gigabits per second. Old fashioned copper is limited to 84 kilobits per second.

But a fibre optic network is expensive, especially if the fibre is to replace all of the existing copper lines into individual premises - known as the local loop, BT, for example, estimates £15bn to take fibre to for service pricing. the majority of UK population, rising to 20bn to reach the most remote parts of the country. The phone companies are concerned about getting a return on that investment. Operating the superhighway profitably will not be as easy as on the existing copper networks - and for that reason. the phone companies are reluctant to invest in the fibre infra-

structure until they are sure of

getting a return. Industry experts argue that the present method of charging for calls - where prices are determined by the distance of the call and the capacity of the line - cannot be sustained on a fibre network - "when you have fibre in the local loop, you have an infinite supply of capacity. For anyone to sell that on a bandwidth related tariff is a nonseuse," says Malcolm Matson, chalrman of

National Telecable. BT is exploring new ways of tariffing as part of a trial of multimedia services in lpswich, Suffolk. John Drew, of BT's corporate strategy department, recognises that changes will be needed - "we don't want to he constrained by 80 years of existing tariff structures." Hepoints out that the information superhighway is not the same as the phone service as we know it loday. The

Al Gore: 'Superhighways must be widely accessible

difference lies in who provides the content - 'in voice tele-phony, it's simple: the users generate the content. In multimedia, the users do not generate the content. They access it on a service."

In commercial terms, the cost of providing voice telephony is the cost of the line. On a superhighway, the providers of the service want payment, and therefore the cost of the service embraces the content as well as the line.

Mr Matson believes the solution is to separate the ownership of the fibre infrastructure from the service provision. Such a structure, not unlike the current set up for mobile communications in the UK. would provide more flexibility

"The separation of Infrastructure from service provision is certainly where the industry is going to end up. But it is not something the telephone companies will do voluntarily," comments Andrew Entwhistle of the Cambridge-based telecoms con-

sultancy, Analysys. Demand for multimedia services is another concern. In the

long term, new services - ranging from dial-up books and compact disks, to interactive education could be made available. But in the immediate future, the main demand is seen to be entertainment movies and computer games. The BT trial will concentrate on a video on demand service, as will a similar trial by Time Warner in Orlando, Florida.

The theory of video-on-de-mand is that there is an existing market for video rental. which would be largely replaced by an on-line market. But Mr Entwhistle casts doubt on its potential size: "There is a major threshold determining how much people will spend to get more than cable TV. The initial hypothesis that people would double their expenditure to get interactive TV has been exploded. There's not much evidence that people will do John Drew believes that

superhighways will actually need to hegin with a much more familiar service: broadcast entertainment. It would be a more obvious wedge to put in the consumer's door, and one from which to introduce the new multimedia services in a gradual way. This is why BT for example, insists it wants its licence altered to permit it to carry broadcast entertainment before it will install fibre to every home. The phone companles therefore question the political assumption about peo ple's right to bave access to the superhighway - especially if the phone companies, not national governments, are to foot the hill: "What service do people have a right to?" asks Mr Drew.

The idea that everyone has a right to phone services stems from the days when the phone network was in its infancy. The telephone gave people a facility to communicate with others. The super-highway, however, looks like being primarily a medium of entertain ment: thus, there is a case that the commercial market should dictate who gets it. Put in simple terms, people do not have the automatic right to dial-up Madonna movies. And if people do not have a right to it, and there is no clear profit in it.

they won't get it. In the UK, the Telecommunications Users Association is pessimistic about the chances of fibre connections to every home - "realistically, it will never happen." says John

Skarratt, TUA director. However, the phone companies are pursuing a technical alternative to fibre, which may provide a commercially expedient solution. Known as ADSL (asymetric digital subscriber loop), the new technology operates at up to 6 megabits over an existing copper phone line. It is nowhere near the speed of fibre, but could be sufficient for the entertainment and other consumer-oriented serWe call it the Global Digital Highway."

It will improve your business communication worldwide.

It will improve your business worldwide.

INDIA: confusion and delays have hindered the race to catch up

### The target is 10m new lines

With its own funds squee

many, and Japan's Fujitsu. But it will be difficult to meet the government'e demanding time-table, given the department's past record in accommodating the private sector. With 46 trade unions, representing 470,000 workers, the department has long been suspicious of changes which curb its influence. Since 1992, when value-added services such as cellular telephones and voice mail were liberalised, the department has been entrusted

with handling potential competitors from the private sector. The result has been confusion and delay. Cellular telephones contract awards made in October 1992 were challenged in court by unsucnications policy, permitting cessful bidders in a case which went to the Supreme Court, which then ordered the ministry to reconsider the hids. A new award was expected in early October.

The acrimonious debate inside the department which has accompanied the launch of the new policy for basic services does not bode well for its smooth implementation. Mr Nagarajan Vittal, the former telecoms escretary, who was transferred out of the ministry a month ago, lost his joh because he became involved in a public row with his minister. Mr Sukh Ram.

Mr Vittal, brought into the ministry last year to spearhead pro-market reforms, fought hard to make the new policy as liberal as possible. Mr Sukh Ram, supported by the department'e trade unions, adopted a more cautious approach. Mr Narasimha Rao felt he had no choice but to move Mr Vittal for abusing his position as a civil servant in speaking too

Mr Vittal's departure was followed by the announcement of the industry early.

details off the new policy, Which include a 49 per cent cap on foreign investment in any private carrier. Private companies will also be limited to providing local networks - they will be barred from operating the much more lucrative long-distance and international services. Companies will be free to hid

for licences in 18 regions, which roughly correspond with India's states. Only one private carrier will be permitted to operate in each region - but will face competition from the existing state-owned service.

Licence-holders will be required to offer lines in rural districts as well as the far more incrative towns and cities. The licences will run for 15 years and there will be no restriction on the number of licences ewarded to any one company. Mr Sukh Ram has said he hopes the first private carrier would start operating

There will also be a new reg ulatory body - the Telecom Regulatory Authority of India. which will oversee the private operators. It will not have a separate statutory existence from the telecommunications

denartment The guidelines have provoked a mixed response from industry. There is relief that Mr Vittal's departure has not further delayed the progress of the new policy. But there is also concern that the arrange ments for pricing and revenue sharing have not heen announced. The published policy leaves the telecommunications department with ill-defined powers to control the

creating great scope for delays and for corruption. However, some executives argue that the lack of clarity is the price companies will have to pay for investing in the market at the beginning of its development. They believe that the ultimate prizes will justify the cost and risk of entering

negotiations with bidders,

CANADA

### Landmark rulings

New national policies in Canada will bring vigorous competition between the telephone companies and cable-TV operators, reports Bernard Simon in Toronto

anada has moved more cautiously than many other industrial coun-tries to lift the regulatory barriers which have long stifled competition in the telecommunications market. The slow pace of change has given con-sumers fewer choices and has arguably held back technologi-

On the other hand, Canadians continue to enjoy one of the world'e most efficient phone systems, and among the lowest charges for basic ser-vice. However, the winds of change are likely to blow more strongly in the wake of a series of landmark rulings in mid-September by the Canadian Radio-television and Telecommunications Commission

(CRTC). The CRTC's new policy, which is expected to form the regulatory framework for the next 10 to 20 years, opens the way for much more vigorous competition between the established provincial phone companies, cable-TV operators and the plethora of resellers which have recently gained a toe-hold in the long-distance market. by leasing lines at bulk rates

from the phone companies). The Commission has determined that barriers to entry, as well as restrictions on the participation of telephone companies in emerging information and transactional telecommunications eervice markets, should be removed," concludes the CRTC in its 165-page

report. Under the ruling, the hefty crose-subsidy between long-distance and local calls will be significantly reduced by allowing local phone companies to push up their charges by as much as 40 per cent over the next three years.

At the same time, the CRTC will relax price regulation replacing a rate-of-return yardstick with a more market-oriented system of price caps -"this should lead to price stability for consumers and and greater flexibility for telephone

companies to invest in a more modern infrastructure and to introduce new services," says the CRTC.

These reforms are likely to encourage newcomers to enter the local market in competition with the provincial phone companies, such as Bell Can-ada (Ontario and Quebec). BC Telecom (British Columbia) and AGT (Alberta), which presently have a monopoly on local services. But the telcos will also be free to spread their wings, both as carriers and

content providers. Although they will not for the time being be granted broadcast licences, they will be able to provide distribution facilities for broadcasters, including cable companies.

Analysts at Nesbitt Burns, a Toronto securities firm, predict that the ruling will benefit almost every sector of the telecommunications industry. The big phone companies

"asked for a more freely competitive market where they would have the flexibility to use their experience, expertise and considerable reach to offer a broad range of services to customers," Nesbitt Burns says in a report. "This decision goes a very long way in that direc-

Resellers are likely to reap the benefit of lower charges for access to the telcos' switching facilities -"in the medium-term, the advent of local competition could lead to some profitable expansion opportunities," adds Nesbitt Burns.

Cable-TV operators will also be able to broaden their horizons, without any siginficant erosion of their existing bustnesses. Within each sector however, there are bound to be winners and losers.

Judging by recent experience in the long-distance market, where competition began in 1992, some surprises are also in store. The telephone companies, which have long had a reputation as slow-moving behemoths, have turned out to be unexpectedly agile. Bell Canada has cut its long-distance charges by an average of 30 pc since 1987, and by up to 60 pc for high-volume

Productivity improvements, including the elimination of 5,000 jobs, have shaved 11 per cent off Bell's operating costs per access line over the past five years. By contrast, business has

been unexpectedly tough for the plethora of newcomers in long-distance market. Uni tel, which pioneered competitive long-distance services, lost C\$82m in 1992 and another

C\$525m last year. Most resellers do not expect to be in the black until 1996 at the earliest. STN, one of the most aggressive resellers. recently announced a thorough restructuring, including the departure of its chief executive, after seeing its share price tumble from a peak of C\$7.63 in the second half of last year, to little more than C\$2 in mid-

Even before the recent CRTC decision, the phone companies had begun to secure their position in the converging worlds of telephony, broadcasting. computers and consumer elec

Stentor, which is the long-distance consortium of provincial telcos, unveiled plans earlier this year for an open-access, interactive broadband network.

The coast-to-coast project known as the Beacon injutive involves an investment of about C\$8bn, and aims to reach 80-90 per cent of Canadian homes and businesses within the next decade. Stentor is also in the process of setting up a multimedia company develop suitable content for

The cable-TV industry is smaller and more fragmented than the phone business. But cable companies have the advantage that more than four have access to cable, one of the highest penetrations in the world. Their ability to offer competitive local phone service is growing with the gradual installation of fibre-optic networks equipped with two-way

By far the best-placed cable company is Rogers Communications of Toronto. Rogers, whose interests include a stake in Unitel, the long-distance operator, struck a deal earlier Hunter, the third biggest cable operator.

Once the purchase is finalised, Rogers will have a 31 per cent share of Canada's cable market. The Rogers-Maclean Hunter deal could be the start of a period of consolidation, which would put the cable industry in a better position either to force alliances with the phone companies, or to challenge them head on.

New equipment application: sonar modems

### Farewell to underwater phones

Smit text and graphics underwater are speeding up the work of divers. Since July, US defence agencles have been testing "wet" portable computers that use sonar to maintain continuous con-

tact with the surface. The hand-held computers mean that divers can dispense with a lot of their convenwriting slates, depth gauges and ropes. The built-in sonar modem allows the surface crew to monitor the progres of the dive, to receive data from the diver and to relay messages that increase the

"Underwater telephones can distort your speech and be hard to understand," says Marco Flagg, whose Desert Star Systems, California, designed the DiveTracker computer. "They can also need extra cables. Our system overcomes these problems and it can also store all the data from a dive, including logging the diver's move-

The DiveTracker is a box a little larger than a mobile phone, machined out of portahle aluminium to withstand the pressure 1,000 feet down. It includes the standard depth. and tank pressure gauges which are integrated with the computer. It has a micro con-

memory holding the operating system and bespoke applications software. There is a back-lit graphic LCD display of 64 by 128 pixels and a solid-state 16-key pad operated with a magnetic pointer.

It is powered by an internal rechargeable nickel-cadmium battery that is said to last up to eight hours if the modem is used only 'moderately.' If used continuously, the battery runs flat in two hours. Once back on board ship, there is an RS-232C serial port for downloading data to an IBM-compatible personal com-

Software for DiveTracker is written in the "C" program-ming language and the first package covers the three main needs of a diver - dive status/decompression display, communication and naviga-

ach function has its own display screen. Besides a graphic dive profile it also shows the present depth, tank pressure, water temperature, time elapsed, air consumption and remaining air time. The modern has a range of 300 feet in 'noisy' waters, where the sounds from creatures such as dolphins disrupt the signal, up to 3,000 feet in tranquil lakes.

DiveTracker models cost

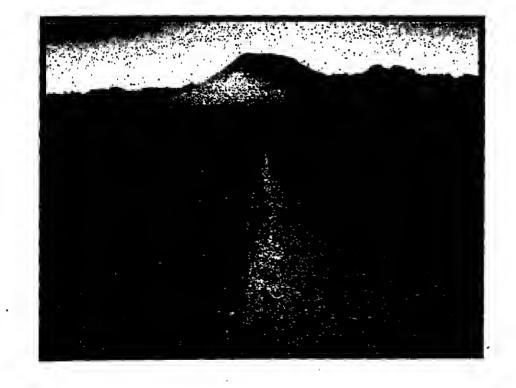

their divers are doing, 1,000 ft There is a software package that is targeted for divers that need to follow precise search patterns under water, such as in explosive ordnance dis-

In the scientific field, there has been an interest to use DiveTracker for data recording as well as a sensor data acquisition device.

One group may also use it to track scientists performing their underwater experi ments: safety regulations call for surface team members to be aware of scientist-diver

MIN MALE WAST

Your company is only as efficient as its internal and external communication, and that's where the Global Digital Highway is able to help you. An information path that circles the world, the Global Digital Highway allows Cable & Wireless Business Networks to provide you with uninterrupted, cost-efficient communication throughout your whole company. Take a moment to think about your communications; imagine a radical improvement; imagine shorter lead times; better research and development; more coherent global marketing; now contact your local Cable & Wireless company.

AN ALLANCE OF THE WORLD'S CONTINUES CONTINUES

### You can always switch off

A portable phone that works anywhere worldwide is no longer science fiction, according to satellite operators. Serious investment lies behind their dreams of global telecoms, reports Andrew Emmerson

ess than ten years ago. when celiular radio opened in London, handheld mohile phones were a novelty. They cost a king's ransom and had most of the characteristics of a brick (including the nickname), hut they represented a genuine

For the first time anyone with the money could make phone calls from more or less anywhere - at least, anywhere in range of a base station anyway. Now another communications hreak-through is about to move those base stations into the sky so that portable phone users will always be in touch, no matter where they are throughout the world.

Purists will no doubt argue that luggable mobile telephones existed before cellular and that you can already make phone calls by satellite worldwide if you are prepared to carry around a terminal the size of a briefcase.

Neither of these solutions were mass-market products, whereas the new generation of portable phones are intended for a wide user-base, even if the cost restricts take-up in the early stages.

Charges, in fact, should not be a big hindrance among potential users: according to fridium, front-runner among the satellite phone consortia, dual-mode handsets will allow users to switch to cheaper land-based services when pos-

lridium customers can expect to pay \$3 (£1.80) a minute for calls, whilst their rivals intend to undercut this figure. Vodafone, a member of Globalstar, another consortium, says typical charges will represent only a modest premium to existing cellular tariffs. indeed in the US, Globalstar has announced prices as low as 65 cents - just under £1 a minute.

Six competing consortia have announced plans to offer global telephone services hy means of satellites in low earth orbit ("Leo" satellites) and a seventh is expected shortly, lridium, led by Motorola, was the pioneer scheme and has been joined by contenders Globalstar, TRW, Teledesic, Constellation Communications and Ellipsat.

Rather than compete with established cellular radio operators, the sky-hased systems will collaborate with them, offering them franchises. The UK's Vodafone group has, for instance, acquired the franchises for Globalstar in the territories where it is already involved in operating cellular networks. These include Australia, South Africa, Hong Kong, Sweden, Denmark, Sweden, Malta, Greece and, of course,

Gerry Whent, Vodafone chief executive, explains the rationale for this: "We've always heen at the leading edge of mobile telecoms technology and we regard the Glohalstar service as being complementary to the terrestrial cellular networks that we already operate in a number of countries.

"it will enhance the potential coverage to subscribers in more remote areas who will use dual-mode handsets capahle of using either terrestrial GSM networks or Globalstar when out of local cellular coverage areas,"

In terms of technology and service offering there are general similarities between the plans announced so far. Globalstar and Iridium will both open commercially in 1998 and each will also allow their subscribers to use land-based GSM cellular systems wherever available (and incidentally, confirming GSM as the de facto global standard for mobile phones).

Iridium services will include

voice, data, facsimile and paging. lridium will employ a 'constellation' of 66 Leo satellites, whilst Globalstar is based on a constellation of 48 - whereas Iridium plans links to pass international calls

between satellites, Globalstar does not, and will rely, on long-distance terrestrial net-The scale of investment

required - Iridium will cost \$3.2bn to build - means that costs must be shared between constructors and network operators. The consortium announced this month that Germany's Vebacom would take a 10 per cent stake and invest at least \$140m to acquire in return the northern and western European gate-

Satellites: helping to keep the whole world in touch

In Globalstar, Vodafone has joined nine other international companies and will contribute \$37.5m in 1994-95 for a stake of around 10 per cent in the consortium.

Not all potential global satellite operators are newcomers, however. BT and other partners in Inmarsat, the international consortium providing satcomms to shipping and airlines, have announced their own hand-held satellite phone called inmarsat-P and targeted for introduction hy

Whether all these plans will come to fruition is anyone's guess: some observers are chary whether the total business to be had can support such grandiose plans - and

they fear charges may need to be raised to protect terrestrial networks, especially in developing countries. Some nations may demand a high premium for the tight to establish earth stations, forcing up charges further.

Some European telecom operators are also privately critical of what they see as US aims of global domination in satellite communications, as well as "bad faith." Because satellites ignore national houndaries, any service authorised in the US has, in effect, a world-wide operating licence, and as long as customers are happy to deal with an operator in America, they can use their phones wherever they choose. This, they say, gives the US an unfair advan-

There is also disagreement over frequency allocations: channels or frequencies for radio communication are at a premium; a world conference in 1992 set aside radio spec-trum in all countries for a new, third-generation terrestrial mobile phone system. However, in the US, part of this spectrum has now been allocated to iridium and other Leo satellite systems, preempting its use for other ser-

Whilst this may be expedient now, it could also cause problems for the future develcoment of the terrestrial service. Official talk of a rift is discounted, however, hy David Court, head of the European Radio Communications Office in Copenhagen: "We would merely point to a difference in emphasis between the US and Europe; America is clearly focusing on satellite services, whereas Europe is more concerned with terrestrial services," he says.

The vision of the phone that works everywhere is now within reach, which must assure the future of personal satellite communication systems. Coupled with a personal follow-me phone number, the user will stay in touch with the world wberever he or sbe roams. Thankfully an on/off switch is also a

**MULTIMEDIA** 

### Many bridges to be crossed

Multimedia has been the victim of its own promotion, but that's no reason to write it off entirely, reports Andrew Emmerson sounds suspiciously like a repeat of BT's

he cynical tags, "vapourware" and "real soon now" are commonly associated more with computing than telecommunications, but multimedia could change this. Vendors who traditionally shunned the hyping of products seem to have lost their inhibitions with multimedia, even though its most dynamic aspect appears to he the extravagance of the claims made

For many observers, despair and disinterest have replaced early enthusiasm, as the multimedia concept is successively redefined and relaunched.

On the other hand, according to the "real soon now" merchants, the promises and predictions for multimedia are, after an agonising wait, starting to turn into

indeed, multimedia communication is believed by industry pundits to be the growth market of the 1990s and is set to repeat for manufacturers the commercial bonanza of the fax revolution of the eight-

Multimedia is defined as the integration of a variety of audio-visual presentation methods into a single framework, using a personal computer as the "platform" or basis. The technique is well established as ntation medium and is now being advocated as the universal answer to husi-ness communications, as well. The problem is that multimedia may be adopted for the wrong reasons.

"The corporate world always has a tendency to grasp at the newest advance in technology as a panacea for all their problems," comments Judy Roland, director of Mouse Power Presentations, a multimedia creative studio based in Box. Wiltshire.

"Like any other communications tool, multimedia is appropriate for achieving some business objectives - hut not all." she asserts. "We have a major education problem, not to get management to accept multimedia - they do so, already - but to show them it's not always the most appropriate technique nor is it some miracle means where you just press a button and it revolutionises your work.

"Multimedia has a serious role to play it's already used much more maturely in the US - but it shouldn't be chosen purely

Identifying the kind of productivity improvements that multimedia is expected to achieve is even harder, according to Jeff Goldherg, an analyst with technology research consultancy, Dataquest.

The truth is that multimedia is a completely abused topic, one which has been described incorrectly by industry and misunderstood by users," he explains.

"Multimedia is not a technique or goal in isolation but rather one single element of a much broader discipline. Anyone who

promotes multimedia for its own sake is heading for trouble."

To date, he says, the most successful applications for multimedia have been in presentation and these have been adopted and accepted, not because they were touted as multimedia but rather because no-one even mentioned the 'M' word.

Whereas the average husiness presentation a year ago used simple black and white transparencies and an overhead projector, today you see computer graphics in colour and motion on a video projector. This, he asserts, is an appropriate and practical application for multimedia, even if other people do not class it as such.

According to Goldberg, multimedia's chief achievement - so far - is in its use as a "fix" to correct the inadequacles of the basic PC computer. To fill in the gaps in the original PC specification, suppliers

The home TV set; some analysts see it as the agent of the multimedia revolution

have come up with improved sound and vision capabilities, together with the abil-ity to play CD-ROM disks, turning the humble PC into a powerful tool for training, video-conferencing, distance-learning and, inevitably, computer games,

Nevertheless, he concedes that this early incarnation that we currently call multimedia is insignificant in terms of market share and cannot be said to fulfil the ambltious claims made for the concept.

Other parties are pinning their faith in the home TV set as the agent of the multimedia revolution. This autumn, bundreds of homes in Cambridge will take part in interactive multimedia trials and will be offered personalised news services, videoon-demand, games, education and armchair shopping. Large companies are involved, including Cambridge Cable, News International, Anglia Television, Acorn Computers and Olivetti. To some observers, however, the trial

Prestel, dial-up computer games and movies by cable a decade ago, which proved minimal user demand. Probably the most valuable information that the trial will generate is that the bome TV is not the most appropriate platform for multimedia. So perhaps multimedia belongs in the office after all; certainly that's where the larger informatics companies see its

encounters of the expensive kind with

future. Companies such as Alcatel, Philips, IBM and Olivetti, as well as telecoms players such as BT envisage multimedia as a unified total communication system: unlike the telephones, fax machines, computers and even videophones we have today, multimedia combines all these capabilities and more in one single desktop terminal.

Now, they say, the common desktop computer has been transformed into something much more powerful, in fact a real tool for husiness. Soon we could be seeing the person we are phoning in a corner of our PC screen, with this image then replaced by sight of a document we are discussing jointly. Researchers could examine pictures in a photographic library at any time, without leaving their desk, then extract the images required and use them in a new presentation of their own.

Significant problems remain before this can come to pass. Setting aside the lack of apparent user applications and easy-to-use connectivity, there are hig hridges to cross in terms of workplace culture and user

According to a senior executive of one of the companies just mentioned, multimedia offers the office automation industry a licence to print money - users are keen to adopt leading-edge technology and are probably prepared to pay for it - "but," he confesses in the same breath, "the tragedy is that we'll probably blow the opportunity ... simply because all this technology is too complicated to use.

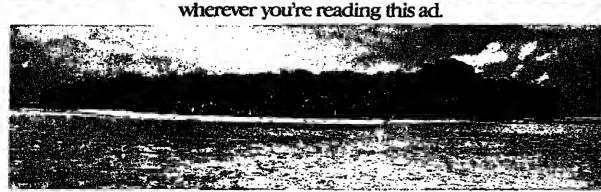

"If people cannot even program their video recorders at home, how on earth will they relate to a Pentium PC, a CD-ROM player and two video cameras to drive?" His dilemma may be not be so imminent, though: according to Dataquest's Goldberg, the multimedia revolution can ouly take place with an adequate commu-nications infrastructure and this has not

been fully defined or developed yet. Existing technologies are too expensive and take-off will depend on further progress with data compression or the deploy-ment of an affordable universal broadband

Until then, it will remain an effective technique for specialist applications, but hardly the all-embracing cure-all portrayed up to now.

### TELECOM VALLEY ON THE FRENCH RIVIERA

by Joel Stratte-McClure in Nice

When the European Telecommunications Standards Institute (ETSI) holds its 21st general assembly meeting in Nice next month, it won't be the first time its high-powered executive members from 28 European countries visit the French Riviera. ETSI, which creates technical standards with a global impact on telecommunications products and networks, has been located in Telecom Valley on the French Riviera since 1988.

"We are a think tank for new ideas in Telecom, which has a variety of networking, business telecommunications and an important attribute to Telecom Valley on the French Riviera," explained ETSI director Karl Heinz Rosenbrock. "The main players in telecommunications were firmly established before we arrived but many others have chosen to relocate more recently. Being close to the action facilitates information flow and benefits their overall activities."

Telecom Valley is a key aspect of the French Riviera's ongoing transformation from tourism to high technology. The transition began over thirty years ago when IBM established a research facility in La Gaude and Texas Instruments opened its European headquarters in Villeneuve-Loubet. Today forty percent of the 16,000 people in Sophia Antipolis -Europe'a foremost science park, which is celebrating its 25th anniversary this year, and the best-known of numerous business and industrial parks on the Riviera - are working in the computer science. electronics, information technology and telecommunications sectors.

The creation of Telecom Valley in 1991 consolidated the thrust of telecommunications companies throughout the area. Today the Telecom Valley association provides a network for communication, research, development and commerce between an increasing number of businesses.

"The Telecom Valley association promotes the exchange of technological information, the development of specific telecommunications training programs and interaction with highly specialised subcontractors." explained Pierre Fumaroli, the first president of Telecom Valley and former managing director of Texas Instruments.

Telecom Valley corporate founders included Aerospatiale, AT&T, Digital Equipment, ETSI, France Telecom, IBM, Rockwell International and Texas instruments. The association gets a tremendous boost from the established presence of both ETSI and France

communication, research, educational and advanced telecommunications activities in the area.

"This region of France is second only to Paris in generating international telecommunications traffic and has a full range of highly developed services. commented Michel Lafon, director of France Telecom in Sophia Antipolis.

Telecom Valley is also prospering hecause it is much more than a mere marketing concept.

"Telecom Valley is a real force founded and nurtured by the telecommunications companies themselves, contended Bruno Peuch, managing director of AT&T Paradyne and current present of the association.

Long established companies on the French Riviera firmly back the region's latest connection for companies in the telecommunications arena.

"Telecom Valley prevents us from remaining an insular and isolated company," stated Jean Zieger. director of Aerospatiale in Cannes. "It enables companies like mine to better profit from the expertise available in this region."

Telecom Valley is also home to a wide variety of high-tech start-up companies, educational institutes like Theseus and Eurecom. and research facilities like France Telecom's National Center for Telecommunications Studies (CNET). Major telecommunications consumers - including Air France, Amadeus. Questei. SITA and other multinational firms are also found on the French Riviera.

The combination results in an attractive site for telecommunications firms or users of any nationality

"The established presence of large telecommunications companies makes it very sensible for Japanese firms to locate in Telecom Valley," concluded Bruno Pagluca, director of Fujitsu Personal Systems.

### INTERNATIONAL TELECOMMUNICATIONS 11

INTERNATIONAL ALLIANCES

### Global link-ups could transform the industry

The last year has seen the rise of global alliances between telecommunications operators, the impact of which could be a transformation of the international telecoms industry, reports Andrew Adonis

he outlines of the new structure of the world telecoms industry are starkly clear; three rival alliances of operators, each seek-ing to create and corner the market for one-stop international telecoms contracts. Although defensive as much as offensive in motivation, the alliances are displaying less and less regard for the "cartel culture" which has hitherto governed international tele-

The three alliances are headed respectively by British Telecommunications, AT&T. the largest US operator, and Deutsche Telekom, the stateowned German carrier.

Concert, the joint venture company headed by BT, is widely credited as the most advanced of the three alliances. Its cornerstone is a \$5.3bn alliance between BT and MCI, the second-largest US long-distance carrier, forged in June 1993. The alliance involved BT taking a 20 per cent stake in MCI for \$4.3bn. and the establishment by the two companies of a 31bn joint venture (Concert), based in the US, to develop and market onestop voice and data services for multinationals.

Concert has gained regulatory approval on both sides of the Atlantic and launched a range of voice and data services. Its main strategic priority is huilding relationships with national operators to market its wares.

So far, it has signed up three of the four Nordic national operators (Norwegian Telecom, Telecom Finland and Tele Danmark, the Danish national operator), and Nippon Information and Communication (NIC). a small joint venture between NTT, the Japanese national domestic, and IBM Japan.

None of these tie-ups involves equity exchanges or is exclusive, although the Nordic alliance is more than a simple marketing agreement since the four partners have agreed jointly to attack the Swedish corporate market where the national operator. Telia, is a key member of a rival alliance. However, BT does not rule out more equity partners for Concert. Its most evident weakness is in the crucial Asia-Pacific region, where NIC is no substitute for its parent (NTT), or for one of the larger national oper-

the second of the alliances, is a more complex hybrid formed this June between two different groupings: AT&T's Worldsource venture and Unisource. a joint venture between four mainland European operators. The two have been growing

☐ Worldsource/Unisource.

separately - indeed, in competition - for more than a year, but are now committed to progressing in partnership. Worldsource involves no equity exchanges between car-riers, but is a bid by AT&T to enlist a cast of leading national and regional operators to market and help provide its inter-

The members, who have joined with differing degrees of commitment, include KDD, the Japanese international operator, Singapore Telecom, and Telstra, the Australian national operator. Telstra is a significant force across Asia-

ntil this June, World-source's obvious weakness lay in Europe. AT&T pondered several strate-gic options but for a year appeared reluctant to chose between them. In the end, Unisource became an almost inevitable partner.

A joint venture between the national operators of Sweden, Switzerland and the Netherlands, Unisource has direct contact with most of Europe's multinationals and was developing a solid reputation. Its imminent expansion - now completed - to include Telefonica, the semi-state owned Spanish national carrier, was a further attraction to AT&T because of Telefonica's significant operations in Latin America. And since Unisource

included none of Europe's four

largest carriers, the tie-up is hard for regulators to oppose

on competition grounds.
For its part, Unisource needed a US partner urgently to be credible to multination. als. Early in the year it joined AT&T in a successful hid to provide telecoms facilities to the EVUA, an association of more than 30 European multinationals contracting for a common corporate network for their European traffic.

"It brings us what we needed to make a strong competitor in this international market. says Mr Viesturs Vucins, Uni-

source chief executive.

Atlas, the third alliance, comprises Deutsche Telekom, France Telecom and Sprint the third-largest US long-distance carrier.

As with the AT&T/Unisource alliance. Atlas was preceded by a grouping of the European carriers, who a year ago formed a joint venture called "Eunetcom.

In June, this was expanded to include Sprint, when France Telecom and Deutsche Telekom signed a deal to take a 20 per cent stake in the US operator for \$4.2bn.

"There are hard and soft alliances in this industry," says a leading corporate finance adviser to Deutsche Telekom. "To our mind, the lesson of BT/MCl's marriage was that only the hard variety were

dications are linking students and scientists, half a world away, in less than half a second, in the Jason project, a ploneering concept in interactive 'distance learning.' Pictured above is the EDS information management centre at Plano, Texas, where satellite signals are monitored. Next February, half a million students and school-children will be able to watch scientists in a live exploration of the creter of Kliauea, one of the world's most active volcanoes, on the island of Hawaii. This year, in other Jason ventures, children at UK achools were to follow "live" exploration of the rain forests, reets and caves of Belize in Central America.

durable, so we had to go the whole way."

Howaver, Atlas may yet founder on the rock of regulation. BT faced a marathon examination by US regulatory authorities, lasting over a year. when it was pressed hard on the issue of the openness of the UK telecoms market to compe-

The US has since formally declared the UK's telecoms regime to be "equivalent" to the US in terms of the openness - the only country besides Canada to enjoy that status.

By that token, Atlas is set for a traumatic ordeal before the Federal Communications Commission and the US Department of Justice. Neither the French nor the German public voice telephony markets are open to competition – and will not be until 1998.

AT&T is making much of the prospect of "monopoly" revenues being used to "subsidise" Sprint in its US and international activities, while US operators are unable to compete

head-on in either France or fear that isolation from the Germany. Atlas has to answer similar charges before the

European Commission. Even if Atlas is allowed to proceed, it lacks Asia-Pacific partners. Mr Helmut Ricke, chairman of Deutsche Telekom, says Asia is "an immediate concern", but partnerships have yet to be announced.

If the outline of the alliances

is increasingly clear, vital issues concerning their future remain shrouded in mist. Three issues in particular, each of which has ramifications for international telecommunications more broadly: ☐ Market share: the alliances proclaim multinational companies - anywhere between 400 and 4,000 of them, depending

on tha interviewee - as their

How fast will they gain them? And is that just the first, large step on a road which could see the alliances corner a large part of international telecoms husiness?

There is alarm among the smaller European PTTs, which alliances could result in a haemorrhage of lucrative corporate traffic, since their main corporate customers are almost

by definition "multinational." Liberalisation makes the threat more potent still: the likes of BT and AT&T are already allowed to operate private corporate networks across the European Union; if - as appears likely - full infrastructure liberalisation takes place across the EU in 1998, they will be able to put their weight behind fully-fledged alternative carriers if they consider that to

market. However, for most Asia-Pacific carriers the pressure to ally is less intense. Although the region includes liberal tele-coms regimes such as Australla, most of the market for international telecoms appears set to remain protected by monopolies into the next cen-

be the best way into the local

tury. the alliances say that they need to offer savings on basic

prices of at least 10 per cent to make their one-stop services attractive. However, it is too soon to claim that the new régime will undermine the cartel which keeps international prices artificially high.

If, in a given market, the effect of the PTT joining an alliance is to keep out effective competition, it could have the opposite effect.

Margins: is the core busi-

ness of the alliances - one-stop International corporate services - high or low margin business?

The pessimists say low margin, because multinationals are demanding large savings for one-stop contracts. However, the optimists stress the undoubted dynamic effect of improved networks in boosting traffic and the sale of new ser-

Furthermore, should corporate networks be the thin end of a larger wedge, the pickings could be richer still. That, at Cartel pricing: executives of any rate, is the view from AT&T, BT and Deutsche Tele-

Frank Blount, the owned by the federal government. Aussat, meanwhile, was sold to Optus, a new second telecom carrier licenced in early 1992. Having started by competing with Telecom in cellular telephone market, Optus moved into long-distance services in late-1992.

To improve Optus' chances, Few industry observers a series of ballots were held in would disagree. As recently as Australia's larger cities, giving costomers a well-publicised opportunity to choose between for their international and national long distance services. This process is still continuing. although it has begun to move on to "second-line" cities such as Bendigo/Ballarat in Victoria where balloting starts on Octo-

> Responses have varied, but in the key Sydney market almost 20 per cent of subscribers opted to move away from Telecom. In Melbourne, the figure was 14 per cent. At the same time, selective opportuni-ties bave been available for overseas players. The UK's

Vodaphone won entry into the mobile phone market last year, for example, initially offering services in Melbourne, Sydney and Canberra.

A number of international companies have also entered the "re-sale" market. Last month, Pacific Star, a joint venture company established by Telecom NZ and Bell Atlan-tic, signed a deal with Optus under which the latter will supply long-distance services

But, as Mr Blount says, this limited opening-up of the telecoms sector is almost certainly just the start. The duopoly system in the long-distance market was always intended to be an interim arrangement, and the federal government's declared aim is to move towards full network competi-

tion by the middle of 1997. Earlier this year, in a speech to the annual conference of the Australian Telecommunications Users' Group, Mr Michael Lee, federal minister with responsibility for the industry. indicated post-1997 regime would have Canberra playing only a "minimal" role, "protecting consumers and facilita-ting competition."

The government appears to envisage the introduction of new legislation, setting out the ground-rules for this liberalised environment, in the back-half of 1995. That would then give companies seeking to enter the Australian market an 18-month window in which to develop their plans.

Among the many issues which the post-1997 planning will need to address is what long-term role, if any, should be played by Austel, the industry watchdog. As Australia moves to greater competition on numerous fronts. Mr Lee has noted: "It is quite clear that ... the role of specialist industry regulators like Austel will have to be examined."

For Telecom, liberalisation of the Australian telecommunications market has posed hig management questions. The business has not always been held in high regard by its cus-tomers, nor has it fared particularly well in terms of interna-tional benchmarking studies especially in some key areas, like labour productivity.

Telecom's image was dealt a hlow when Austel published its report on the "Casualties of Telecom" affair earlier this year. The CoT group was a self-styled band of protesters, mainly made up of small businesses, who claimed that the company had failed to take their service complaints seriously and, in some instances. caused them significant financial loss as a result.

Although Austel handed its judgment down in moderate language and the CoT-related complaints were a minute proportion of the total business handled by Telecom, the impression left by the report was highly unfavourable. Telecom, the regulator decided, had failed to take some complaints seriously and its behaviour was "less than that of a model corporate citizen. But if the challenge of

imbuing Telecomwith service values whilst cutting staff numbers without damaging morale, look formidable, the financial picture is

more satisfactory. Last month, Telstra unveiled an after-tax profit of A\$1.7bn after tax and exceptional items - up from A3905m in the previous year on revenues 5.6 per cent higher, at A\$13.4bn. Since half of Telstra's after-tax profits are now paid to its shareholder by way of a dividend, meaning an inflow of A\$738m into government coffers.

But even on this score there are problems. Some observers question what sort of return is appropriate for n government-owned utility. Others ask whether Telstra should really be in the private sector.

Mr Blount, unveiling the results, declined to be drawn on the thorny, highly-politi-cised privatisation issue, beyond noting that ministers bave said that the business will not be handed over to the private sector in the term of this government.

He did, however, note that "the development of a world class Australian telecommunications network requires mas-

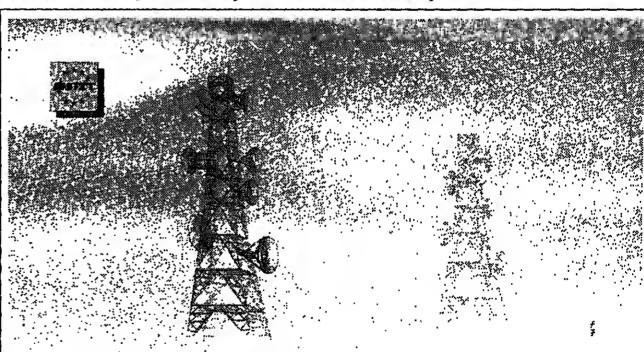

A number of international companies have entered the 're-sale' market

sive investment." Over the next three years. Telstra plans to spend over A\$3.5bo. One of the biggest single investments will be in digital equipment to modernise the network.

The company has also pledged to take its fibre optic and coaxial cable network into 1.1m Australian home by the end of 1996 at an investment cost of A\$710m - suggesting that cable pay-TV may then become a serious rival to the currently more advanced satellite availability.

For Optus, the issue is how to capitalise on Telecom's weaknesses. The newcomer is owned by a mix of domestic and international institutions and acquired a new share-holder in Mr Kerry Packer's Nine Network, the leading commercial TV network, in March. Nine Network paid AS318m for a 15 per cent stake. Optus has said that it expects to float at least part of its equity on the stockmarket during the next calender years, and brokers have already been

As a private company, Optus does not release full earnings reports. However, it makes no secret of the fact that it ran at a loss in 1993/4, although Mr Bob Mansfield, chief executive, has said it should break even in the current 12 months and move into profit thereafter. Revenues in the year just ended have been estimated at well in excess of A\$800m, and possibly over the Asibn-mark

Telecom prices in Mexico are falling sharply as a result of competition and the emergence of cellular services, reports Mark Newman

tries remain cautious about deregulation, Mexico is forging ahead with a swingeing reform programme that will bring the national operator Telmex into direct competition with some of the most powerful telephone companies north of the border.

Competition will largely be in long-distance services. The Ministry of Communications and Transport agreed in July to grant an unlimited number of licences to companies to offer long-distance services from January 1997. A detailed regulatory framework for the new operators will be drawn up in the autumn.

operators will be drawn up in the autumn.
Several Mexican industrial and financial
groups have already thrown their hats
into the ring. The leading contenders are
those companies which have forged links
with US telephone operators.

Three such groups have emerged:

Mexico's largest financial group, Grupo Financiero Banamex-Accival (Banacci), which has taken a 55 per cent stake in a consortium with US long-distance operator

Mexican cellular telephone operator lusacell, which is 49 per cent owned by

Pressures in Sweden's liberalised telecoms sector are intensifying as large international players enter the fray, reports Christopher Brown-Humes

Sweden vies with New Zealand for the title of the world's most liberalised telecoms market, according to the Organisation for Economic Co-operation and Development (OECD). Having for many years bad a de facto state-owned monopoly operating in an unregulated environment, it has moved rapidly to establish a light regulatory framework designed to promote open and fair competition.

The results have been striking. Despite the relatively small size of the country - Sweden's population is just 8.7m - some of the world's biggest telecommunications groups, including AT&T, British Telecom and France Telecom, have entered the market. Moreover a number of new competitors have sprung up, led by Tele2, jointly owned by Swedish media group Kinnevik and Cable & Wireless.

It means that Telia, the dominant operator, is being challenged as never before—
"Telia faces fierce competition on customer premises equipment, data communications services, celiular services, international calls, national long distance calls

An attractive market for investors

### Mexico making up for lost time

Bell Atlantic. Iusacell also has a liceence to build a fixed wireless local telephone network.

☐ US telecoms equipment manufacturer Motorola and the Mexican industrial conglomerate Grupo Protexa; also. the US long-distance operator Sprint is in discussions with Grupo Protexa about joining the consortium.

Joshua Levenhurg, a Latin American analyst at Pyramid Research in Massachussets, says there is "enormous interest" in the Mexican market ~ "the opening of the long-distance market is a tremendous investment opportunity." be adds.

dous investment opportunity," be adds.
Pyramid Research estimates that telecoms service revenues in Mexico will
almost double from \$7.6bn in 1993 to
\$14.4bn in 1998; the market grew by 16 per
cent in 1993.

Mexican long-distance calling patterns are favourable for new operators. Seventyfive per cent of all long-distance traffic is between the cities of Monterrey, Guadalajara and Mexico City.

jara and Mexico City.
Telmex's long-distance and international
call revenues last year totalled \$4.2bn -

Bell Atlantic, lusacell also has a liceence more than 50 per cent of Telmex's total

Mexico's low telephone line-penetration levels also make it an attractive market for investors. There are only eight telephone lines for every hundred people. Telmex is baving problems meeting the demand for new lines, and this gives operators of wireless systems – who can instal lines in a matter of days – a distinct

Telmex is vulnerable to competition —
"you've got some major players with deep
pockets coming in," observes Eduardo
Cabrera. It is difficult to forecast the effect
of competition on Telmex, he adds — "the
key question in Mexico at the moment is
how profitable Telmex will be in the long
term."

A proposed licence fee for new competitors in the range \$100m to \$500m will dampen the prospects for competition. But a more important issue is the interconnection fees that competiturs will have to pay Telmex for passing calls over its network. Telmex will be seeking to pass on to competitors - through their interconnec-

Sprawling Mexico city: target for expanding celtular telephone services

on charges - next of the cost of constitue. Then of the M

tion charges - part of the cost of operating its loss-making local telephone network. Long-distance competitors will operate along similar lines to companies such as MCI and Sprint in the US.

MCI and Sprint in the US.

Telmex customers will able to dial a code to choose a long-distance carrier, but they will also have the option of subscribing to a particular carrier for all their long-distance calls. This is the same system as in the US where AT&T has lost 35 per cent of the long-distance and international calls market.

But competition will develop along different lines than in the US where local networks remain closed to competition. Two of the three leading Mexican consortia operate cellular telephone networks. Iusacell owns cellular telephone networks in Mexico City, and controls other concession in Guadalajara and in the centre and south-east of Mexico. Its concessions cover almost three-quarters of the Mexican population. Motorola, meanwhile, has stakes in cellular telephone networks across the whole of the 2,000-mile border with the US.

This gives the two consortia a big advantage over other prospective long-distance operators. Even when a customer choses a competing long-distance operator, the call begins and ends on local phone lines connecting the orginator and

the person who receives the call. The competing carrier has to pay Telmex for these two local ends, and these payments could eat into profits derived from the long-distance section of the call. Motorola and Iusacell can get round this problem by connacting customers to their long-distance networks using their cellular networks.

networks.

Cellular phone services are currently too expensive for customers to consider using them as an alternative to Telmex's standard telephone service. But prices are failing sharply as a result of competition and the emergence of cellular as a residential as wall as a business service.

In the meantime, Iusacell is building one of the world's first local fixed telephone networks using cellular telaphone technology. The network, which will open in a rural area close to Mexico City in the late autumn, uses frequencies at around 450MHz – the same part of the radio spectrum used by Scandinavian phone companies for first generation cellular telephone networks, launched in the early 1980s. Iusacells's network is supplied by Northern Telecom which has a \$330m three-year

relmex has been bracing itself far competition since its privatisation in 1990—
"they've done a commendable job of trying to improve the technology: 70 per cent of the network is now digital," notes Cabrera.

Telmex has also hiked up local call rates and reduced long-distance and international charges where it will face stiffest competition.

Prices tumble for international and long-distance calls

### Fierce competition in Swedish market

and infrastructure," says Stig-Arne Larsson, Telia's deputy chief executive.

sson, Telia's deputy chief executive.
Indeed, local calis and Sweden's analog
NMT mobile network are two of the few
domains where Telia still has a 100 per
cent market share.

The competition has brought a fall in international and long-distance prices in a country where they already low by international standards. But there has not been a full-blown price war and the effect on Telia's profits has so far been limited. What is clear is that pressures in the domestic market are intensifying. In just 18 months, Tele 2 has bagged mure than

ket, and from this autumn it will offer domestic long-distance services.

Moreover, Telia has lost international calls and data transmission business to overseas rivals. It was more than a little dismayed when StatTel, a state procurement body, passed over it tn award a prestigious data transmission contract to

10 per cent of the international calls mar-

France Telecom.

The higgest challenge may yet be to come. BT has just announced a partner-ship agreement with Telia's Scandinavian rivals - Norwegian Telecom, Telecom Fin-

land and Telc Danmark – as part of a specific drive to win husiness in the Swedish market. Tella purports not to be alarmed by the Increasing pressures, saying It expects to lose up to 40 per cent of international calls and 25 per cent of long-distance traffic in the next two years. Losing more than this would test Telia's patience, however, which may force it to be much more aggressive on

cutting programme, reducing staff numbers from 48,000 to 32,000 in three years. Secondly, it has begun differentiating its products more offering customers tai-

lor-made packages to meet their needs.

Finally, it has gone on the offensive both at home – where it is actively building its position in mobile telephones, for example – and in markets outside Sweden. There are two strands to the overseas

Telia, Sweden's dominant telecoms operator, is being challenged as never before; the state-owned company has lost international calls and data transmission business to overseas rivals, but the effect on Telia's profits has so far been limited

pricing than it has been so far.

"Being the market leader, we cannot stage a head-on price war. We would destroy the market and ruin our company," comments Mr Larsson, while acknowledging it would be politically insensitive if the group went nut to destroy the competition before it has fully developed. Telia has responded in the onslaught in a number of ways:

rirstly, it has implemented a fierce cost-

expansion strategy. One is to retaliate directly against competitors in their own home markets. A good example is the UK where Telia has heen awarded a licence for International calls and has set up a

switch in London.

The trouble here is that access to most other European markets is restricted.

The second plank of attack is Unisource, a venture with Swiss, Dutch and Spanish partners which is specifically

TELSTRA OF AUSTRALIA

designed to provide the international clout which the four companies lack individually. The grouping has forged a joint venture with AT&T for the delivery of voice services to 50 multinationals.

Tella says it can share costs through Unisource while defending its home market (because multinationals can be offered one-stop shopping and a broader global reach) and capturing market share in other European countries. Again, the last ambition will have to awalt a broader deregulation of the European market.

Some worry that Tella is still too dominant, claiming the newly-established regulatory body, the National Post & Telecom Agency, is not trying actively enough to promote competition. Underlying this is a broader concern about conflicts of interest when there is state-owned agency regulating a fully state-owned company.

Jerker Torngren, the NPTA's Head of International Affairs, does not see it this way. He says: "What we want to create is competition. We are not saying we need a certain division of market share to create that competition."

He also rebuts the conflict of interest suggestion, saying that in Sweden there is

a very strict dividing line between the government ministries which draft legislation and the agencles which implement it — "it is the government which owns Telia, not us," he stresses, adding that there are nn policy implications in the fact that Telia is state-owned.

Another concern is that the agency lacks the teeth to enforce its decisions. For example, in the current row between Telia and Tele2 concerning long-distance interconnection rights, the agency can aet as a mediator, but it cannot force the warring parties to abide by its findings.

This is a weakness which could always be ironed out in due course. There were always likely to be some teething troubles given the dramatic change being implemented and the fact that much of the legislation governing the sector only took effect on July 1, 1993. In any case, there is a competition authority to fall back un, as its powers are more than adequate to deal with any clear abuse by Telia of its dominant position.

The one surprise is that Telia, though behaving in virtually every respect like a private company, is still state-owned. This may change in due course. There is no doubt that management is keen on privatisation: the incoming Social Democratic government is much more ambigious about the process. Even so, the Social Democrats have binted they may not oppose privatisation if they think it will help the group's international expansion ambitions.

AND DESCRIPTIONS

The pager? Indeed so: having endured the ignominy of time, living in the shadow of cellular elephony, the trusty war-horse of mobile telecommunications has kept up with the times and has been transformed into a high-speed, high-capacity, frequency-agile 'wireless messaging device. A far cry from tone bleepers, European wireless messaging is moving into the international limelight as a serious contender for a global wireless messaging standard, offering a multiplicity of innovative business and personal

communications applications. The European Radio Message System (Ermes), an EC-championed second generation digital radio-paging standard, is a model for international co-operation in telecommunications. Conceived in 1987, Ermes uses 16 radio channels between 169.4-169.8 MHz, and can bop about each available frequency band to transmit vital information at speeds up to 6,250 kilobits per second to pocket mobile messaging devices.

As a broadcast-based service, Ermes' inherent strength lies in its ability to move large amounts of information from point-to-point, point to multi-point, and also multi-point to Microsoft. Both companies

out across countries utilising satellite up-links and downlinks between message switching centres and their base stausers over any Ermes nettions. This, effectively, reduces operator infrastructure costs

by eliminating a large propor-

Coming soon: the first Swatch numeric pager - it will run on DeTeMobil's 'Cityruf network

tion of the networks' require ment for private leased-line circuits - hard-wired or microwave links - whilst et the same time, increasing the tions to serve the coverage areas. Additionally, with minimal or no paging bureaux per-sonnel message-handling interlocution, network operators will be able to pass on cost-savings from lower overheads to cheaper messaging and terminal unit costs.

The key factor with new mobile communications technologies now coming on-stream is that they will be targeted at new user segments, not solely those who are already well-catared for: Ermes, and generic wireless messaging, will have a much broader user appeal as opera-tors and value-added service providers launch global prod-

this view - "there will be those who don't have GSM, or cellular telephones, who would rather have a pager because of the type of work they do or on the grounds of the cost-effectiveness. Remembar that mobile telephone services have always had a traffic cost - pag-ing does not. No connection charge, no monthly rental -

Mr Berntsen concurs with

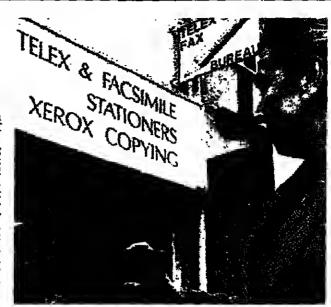

question of segmentation of markets." Successful new messaging

applications will be those that are modest, but not radical variants on current practices. For example, the PC running Windows applications software will be a familiar front-end for many business and personal computer users. The prospect of accessing a pan-European, indeed global network, through a communications software package will be about as daunting as loading and printing a document file.

Further feature rich benefits of international wireless messaging will include the ability to connect a cable from the pager to desktop or notebook PCs, and let the PC store incoming wireless messages direct to the hard disk.

This could ensure critical messages are not wiped inadvertently from the device's volatile random access memory. You could, therefore, leave your pager behind and not miss messages, news or share prices.

Even the pan-European digi- Ermes' 9,000 characters per

fax messaging service for pager users. Developed in conjunction with the police, the pager has a wide range of security applications

and powered up.
Message retrieval services

would not be appropriate in the nightmare scenario: certainly, they would want the information - but uchen? The next day?

"Text messaging and per-sonal wireless information services will be very important in the future." Mr Berntsen believes. "They will become a natural part of most people's working environment. I think they will need a pager – even if they have a mobile telephone. Ermes has the potential for giving such services to most markets, he adds. "We will see more creative ways of making information services that will also have a great appeal to the

Ermes also has capabilities to acknowledge receipt of transmitted information. though this is not seen by the Mr Berntsen as a particular enhancement that will be in demand at this stage, while it is not being ruled out for the future. With digital cellular promising voice, data and fax services, mobile data promis-ing wireless email and remote dial-up data services and download functionality, wireless messaging can offer alphanumeric document transfer and real-tima broadcast information services at minimal costs. Clearly, the convergence pro-cess of historically disparate

mobile communications technologies is well under way.

Growing interest in two-way radio paging services

### A change of image in the US

adio paging, perhaps the least glamourous area of the telecoms industry, is set for its own star turn in the US, thanks to a series of anctions of radio spectrum, staged by the Federal Commu nications Commission (FCC) in the summer.

scribers, but also in enabling

Ermes networks to be rolled-

very large volumes."

The commission succeeded in raising over \$600m from companies eager to bid against one another to acquire a new allocation of radio frequencies that will enable the winners to offer - for the first time, anywhere - two-way paging ser-

The auction exceeded expectations and attracted bidders from outside the confines of the paging industry: two of the most successful were KDM Messaging, a wholly-owned subsidiary of McCaw Cellular, America's largest cellular oper-ator which has been taken over by AT&T, the largest telecoms company in the world; and among others - Destineer, a new company which has the

appreciated how two-way services go beyond the limitations drawn from sale.

of the staid, limited-revenue potential of existing paging systems. New systems allow users to make and receive data messages and paging - sold as one of the new range of interactive multimedia services.

Destineer and AirTouch, one

of the largest cellular operators in the US and a one-way paging operator which also bid successfully for some of the new frequencies, are looking at similar applications: both want to use two-way paging as way to invigorate the market for personal digital assistants (PDAs), the personal organiser-messaging devices launched last year by various manufacturets, including Apple Computers and AT&T. Initial sales of the Apple Newton MessageHowever, AirTouch in partic-

ular believes that PDAs con succeed if pitched at a business rather than consumer audience. The company is already using its existing paging net-work for trials to a PDA manufactured by the electronics company Casio and will extend the service to its new two-way frequencies next year. AirTouch is also looking at

new, industrial applications for paging such as a monitoring device which would be sold to suppliers of vending machines. A radio device, fitted inside a vending system, would emit a signal when it was time for restocking, thus saving the time and expense of regular checks by the vending machine

pad were disappointing; and supplier. All five of the US AT&T's EO has been with-companies licensed by the FCC are looking at similar new waya of widening paging's appeal and increasing its already substantial penetration in the US - where, incidentally, eight per cent of the population owns a pager.

> comparison, in Brurope, only three per cent of the population are pager-users; there is also greater market pressure in Europe as the cost of using cellular phones continues to fall. Cellular, particularly since the arrival of digital phones based on the pan-European GSM standard, would swamp the European paging industry unless it can maintain its price differential or explore more advanced applications.

Two initiatives in paging during the past year demonstrate the way that European industry is getting to grips with the challenge:

☐ First, there was the launch of the MiniCall service last year by Sweden's state-owned mobile operator, Telia Mobiltel. This has had a significant influence on the marketing strategies of other European operators. MiniCall is known as a "CPP" service which stands for "calling party pays." in other words, the tariff burden is shifted from the pager-user - who buys the pager but no longer pays a oneoff connection fee or monthly rental charges - to the caller who wants to leave a message. Instead of a standard local call tariff, the caller is charged at a

message. The lost revenue from connection and subscription charges is more than made up by increased contribution from call charges, according to Telia Mobiltel. The Swedish model was closely studied by other-operators including BT and Mercury who launched their own versions of the service this autumn. BT gave their service an extra twist by offering it with the UK's first wristwatch pager.

manufactured by Swatch. D Secondly, an important innovation in Europe this year has been the launch of digital paging services. Based on an European Commission-hacked standard called Ermes (European radio messaging system), the system had several technical setbacks following interfer premium-rate for leaving a ence to television sets in Ger-

many, before its launch in France. Several other European operators are to start Ermes services in the near future: Telia Mobitel will launch its Minicall Europe ser-

vice in the first quarter of 1995. Initially, Ermes terminals will be significantly more expensive than today's pagers but they will offer a wider range of services. The system transmits messages faster and is capable of including more text in each message. Futhermore, users are able to receive messages electronically from

computers on Ermes pagers. Ermes' main advantage over existing paging systems is that, as a common European standard, it is possible for the first time to receive messages across Europe.

As the equivalent digital technology to cellular's GSM. which now has nearly 3m subscribers in Europe, Ermes must make a similar impression if paging is to shake off its

metres of its place of origin.

Increased competition and the aftermath of recession have tilted the balance of power away from the telecoms operators towards the users, reports Martyn Warwick

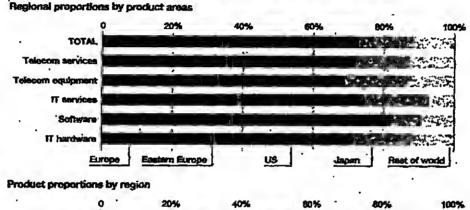

nternational telecommunications was the industry which stood up best to the the global recession of the early 1990s. While many other industries suffered, telecoms kept going et a strong pace, often on the basis that while one country, trading bloc or applications sector declined. another one, somewhere, was

bound to be on the way up. Thus, while the market in Europe, the US and Japan stagnated, telecoms operators. manufacturers and equipment suppliers focused their attentions on the more buoyant markets of parts of South East Asia, the Middle East and Gulf and South America.

. They also pitched for a share of the massive, but tradition-ally difficult, Chinese market and made forays into the highly uncertain world of postcommunist Russia and eastern

However, while it is true that the telecoms sector survived the recession more or less intact, the prevailing conditions of that period have had a long-term effect. The present shape of the industry is, in part, the direct result of the realitles of adapting to, and coping with a massive, worldwide, economic downturn.

The other big contributory element is the remarkable increase in International competition in the provision of telecoms equipment and services. It is interesting to note that research undertaken by the public telecommunications organisations (PTOs) in Europe indicates that 80 per cent of their business is in the domesWorld markets: information communications technology

The market for telecoms equipment is classified under several main headings: customer premises equipment, which includes private branch exchanges, terminal and mobile equipment; then there is service-providing equipment, which includes public switching and transmission gear; other main sectors include voice network services; data network services; installation and maintenance. Figures above are for 1993.

with operator in an unprecedented series of industry alli-

Some, such as the proposed Synoptics and Wellfleet merger, the Chipcom and Cisco partnership, the Cisco and Hewlett-Packard relationship and BT's coalition with the Nordic telecom operators, are carefully planned exercises which can be seen to have both immediate and long term benefits for all partners concerned. However, there is a downside. Most mergers are is more than likely that some described as alliances and partnerships, rather than takeovers, but in many cases retention of the name of the smaller company is an indication of the potency of its particular brand rather than its contin-

Some other corporate exercises, although presented as grand designs and strategic alliances, are, in reality, little more than panicky reactions to changed market conditions. It

of these will end in dismal failure. A new report from telecoms strategy consultants, Analysys, supports this conclusion, observing that estab-lished names in both the telecoms and computing-services markets could effectively disappear as wave after wave of alliance activity washes over the converging sectors of telecoms and information technol-

isation, CIT, estimates that the world's top 1,000 companies will top £25bn by 2003. It is obvious then, that aspirant providers of global networks and end-to-end service packages must answer user concerns - or fail in a market of massive strategic importance.

Carriers are also striving to develop and market the ultimate carrier service: as power and bandwidth continue to become cheaper, business is looking for a true multimedia information exchange system which will interconnect LANs and WANs and provide voice, image, video, data, information processing and even entertainment services across the corporate network.

The provider alliance that can provide such a system at the right price - and that does not necessarily mean the first one to market - will have the world at its feet and emerge as the telecoms carrier equivalent of Atilla the Hun.

New mobile communications application

### Tactical advantage for racers

s the European cycle racing season draws to a close, riders on the Motorola squad will be hanging up their Lycra and switching off their radios. For three years the American-based team has been using lightweight portable radios to give it a tactical advantage and to improve race

In the big races like the Tour de France, Giro d'Italia, the Spanish Vuelte and the Tour DuPont in the US, the teams of up to nine riders each have to keep in touch with their managers who follow in cars. They need to know when team tactics are changing and when a colleague needs help.

Traditionally, the manager has driven alongside the riders and barked instructions. The Peloton Communication System that Motorola uses means this dangerous manoeuvre is

no longer necessary. Each of the riders carries a receiver in their jersey pocket and an earpiece fitted into his crash helmet. It can pick up the manager's signal at up to

four miles away, a distance that can easily separate first and last riders on an Alpine

informed of what is happening in the centre of the bunch, one rider in the team has a transmitter unit, weighing eight ounces, fitted under his saddle and a microphone mounted on the bandlebar. He tells the manager whether any teammate needs attention and how rival teams are performing.

The Motorola team reckons the system gives it a competitive advantage. The team spokesman and former Tour de France cyclist Paul Sherwen is convinced it helps them to win

"in the Paris-Nice five-day race last year, our rider Frankie Andreou got out front in a breakaway group," he says. "It became clear that he was wondering whether he should drop back to conserve his energy. Then our team leader realised that the chasing group was tiring and the message went to Frankie to keep up the pres-

sure. As a result, the break-

away survived much longer than it would otherwise have

done.'

He also believes the team's radio saves time - "if you are in the middle of the main bunch of up to 200 riders and you have a puncture, you put your hand up and hope that a race official sees it quickly. The official then gets a message to your team manager who drives forward with a spare wheel it can take more than a minute to get help,

Similar equipment has long been in use in automobile racing. Motorola has worked with the Benetton Formula 1 team and with Indy Cars in the US, hut every ounce counts when cyclists have to pedal for six hours up 12,000 ft mountain roads. "Motorola managed to cut the weight of the receiver unit to just 2.5 ounces by modifying a standard Minitor pager," says Paul Sherwen, "It is just light enough for the riders to accept the burden.'

### VALUE-ADDED SERVICES

### Surprising collaborations emerge

Phone companies and software suppliers aim to reap the benefits of the electronic mail bonanza, reports Monica Horten

o ask a telephone company to do joint market-ing with a software company is a hit like asking the tortoise if it would collaborate with the hare. It seems like a complete mis-match in commercial culture. Yet that could be just what the phone compaoles have to do in order to boost their value-added ser-

The reason is electronic mail. Email is one of the fastest growing software epplications for personal computers. Software giants Microsoft, Lotus and Novell/WordPerfect have targeted communications

as the next big growth area for their own applications. They have simplified end-user email software and are aggressively pursuing it.

One of the problems with email services in the past is that they were not userfriendly, and were usually accessed by equally unfriendly communications software.

Lotus, Microsoft and Novell/ WordPerfect have evolved software which makes it easy for people to send mail, directly from their spreadsheets and word processors: what they call "mail enabled applications." It uses the same interface that people are used to in their other applications, so that people do not need to learn s new way of working just to send mail.

Jenny Proctor, UK marketing director of AT&T Ezylink, cited the example of economists in the City of London who want to replace fax with email for sending reports to customers. This is the direct result of the improved personal computer software - "in the finance sector, mail enabled applications are a growth area," she says.

This should be good news for the telephone companies, which have the opportunity to sell services to support the increased demand for connec-tivity - "software companies such as Microsoft have simplified end-user software, and are promoting telecom activities. This is now acting as a driver for messaging services and frame relay managed data net-work services," comments Neil Lawrence, applications and information marketing man-

ager et British Telecom. The corporate email systems typically run on local area networks (lans); lans in different buildings are connected to cre-"enterprise-wide sys-

One way to achieve lan-tolan connections is to use a frame relay managed data network service - frame relay being a faster method of transmission than older packet switched data networks and more suitable for connecting lans. This segment of the market is currently small, with an estimated value of Ecusom (\$74.4m) across Europe, according to London-based market research consultancy Ovum; this is due to the fact that frame relay is a new technol-

However, sales are growing fast, and vendors such as BT and AT&T report that they are

In the past, vices: BT claims this segment of the market is growing at 300-400 per cent, per year. they buy it out of their own Ovum analyst Clare McCarthy budget - "end-users are now becoming more influential in predicts a sharp upturn in growth from 1996 onwards -"by 1998, we are looking at projected European revenues of around Ecu800m (\$992m) for frame relay services," she

Another way to connect lans is to use the public email ser-

End-users of telecom equipment now have more influence over purchasing decisions

vices offered by the telephone companies. Most email services provide a simple way to connect the popular proprietary lans such as Lotus or: Mail and Microsoft Mail. For example, on Mail users could connect to a service and send mail tween two sites without ever knowing they were not using on Mail all the way. According to Ovum, this market will grow at an everage of 53 per cent a year in Europe.

However, in order to reap the benefits of the email bonanza, the telephone companies have to become as aggressive in their marketing tactics as the software companies themselves. It represents a significant cultural shift away from traditional telephone company thinking. According to Mr Lawrence,

there has been a sea change in

work services which actively target individuals, and sell the benefits of going on-line. They are pursuing high profile marketing campaigns and are creating an awakening as to the possibilities of email. This could represent a fur-

Telecom reforms: lessons learned

Book review: 'Implementing Reforms in the Telecommunications Sector: Lessons from Experience. Edited by Bjorn Wellenius and Peter A Stem; The World Bank, 757 pages; price \$59.95

jorn Wellenius is tele-communications adviser pational and regional traits. jorn Wellenius is teleto the World Bank and a respected authority on telecoms development and restructuring. He and Peter Stern have done a great service to governments and the telecoms industry by bringing together this collection of studies on the international experience of reform in the

The lessons are of critical importance to developing and developed countries alike. Virtually everyone agrees that telecoms modernisation is a spur to economic growth, and will hecome steadily mors important as the information revolution advances.

Governments start from starkly differing positions, egions. At this summer's conference of the Asia-Pacific Telecommunity in Bangkok, a speaker hailing the advance of the superhighway in Australia was followed by another from Papau New Guinea recounting the treks faced by villagers wanting to reach a rural pay phone. There is no pretence in this hook - which includes case studies of countries at all stages from development, from Sri Lanka to France - that reform can proceed without

Nor is there any simplistic assertion that "hig-hang" change is the only viable strategy. The US belecoms industry has retained its leading edge within the confines of a law drafted in 1934 - which looks set to survive for some while yet following the collapse of this year's Congressional legislation - while the Canadian telecoms industry operates within a law adopted in 1906 which is only now being

redrafted. In the developing world, "build, operate, transfer" contracts have evolved to inject private and foreign capital without hreaching formal monopoly regimes.

Even China's ministry of posts and telecommunications looks set to devise an elaborate ruse to the same affect, following contracts signed in principle this month with Cable & Wireless, the UK group which owns a majority stake in Hongkong Telecom

Yet the hasic argument of the hook, repeatedly propounded by the editors and contributors, is simple and universal in its application: that the only effective way to counter persistent shortfalls in

> private investors. The introduction by Wellenius and Stern is about politics as much as telecoms. Discussing the slow pace of reform in sub-Saharan Africa, they note that the region could have "most to gain" from reform but that little has happened in part hecause "national security is still a politically significant issue, compounded by a

green. The systems being worn here are Philips Messenger pagers, offering tone, numeric and text facilities.

eralisation requires prior political liberalisation is hardly novel, nor is it necessarily disproved by China's experience.

In the case of telecoms, however, it is a challenge to those, notably in the US, who see telecoms development and the global information infrastructure" as a means to promote democracy and all that goes with it. The reverse is probably the reality, I shall never forget a phone interview earlier this year with a western husinessman in Rwanda's capital of Kigali, across a brilliantly clear fibre-optic international line, as he described the slaughter and mayhem taking place in the streets outside.

views, which set reform atin America is the develprogrammes within the broad oping-world model which inspires the authors. parameters of public sector constraints and the demands of Chile led the way with privatisation in 1987; in Argentina, Mexico and Venezuela subsequent privatisations were completed in less than two years (only in Mexico was much done to improve the network before privatisation); and most other countries in the region

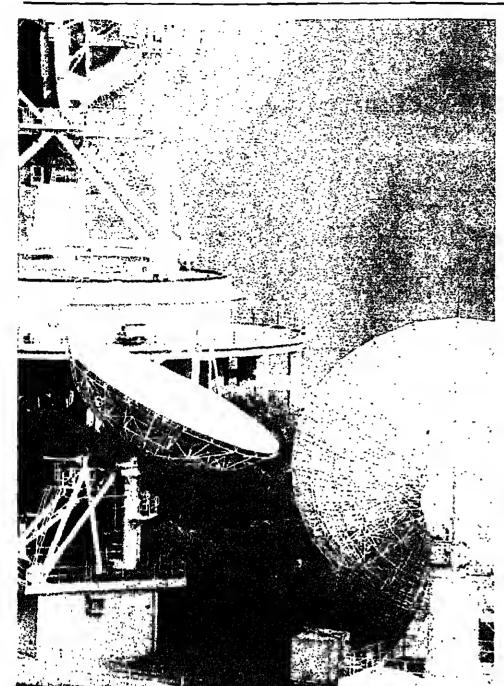

have followed suit. In his over-view, Wellenius pronounces most of the reforms broadly successful. although he notes serious regulatory issues which remain unresolved. His rule of thumb is that privatisation and liberalisation can he carried through in two or three years, but it takes a decade to sort out the regulation.

A key factor in the Mexican reform process was the opening of the cellular market to competition at an early stage of the reform process. This is also the case across Asia-Pacific and Europe, where competition in cellular networks is now widespread and is being extended to fixed-line networks.

There are three clear benefits to such an incremental strategy: it obliges governments to tackle inter-connection and regulation of the state operator before its main business is subject to competition: it forces the pace of reform in the fixed-wire sector, where political and trade union obstacles to change are greater; and it brings together consortia, often led by non-telecoms groups such as Mannesmann in Germany and Bouygues in France, which can move across to the larger fixed-wire sector as liberalisation advances.

The mobile communications sector, becoming ever more important, is strangely neglected. The absence of an index is frustrating. But the book is nonetheless a hible for those contemplating structural telecoms reform.

FINANCIAL TIMES Conferences

WORLD **TELECOMMUNICATIONS** 

### **London** – 6 & 7 **December** 1994

The Financial Times annual conference will review developments changing the shape of the telecommunications industry worldwide and provide a high level forum to exchange views on the way ahead.

### ISSUES TO BE ADDRESSED INCLUDE:

- Whither International Telecommunications Alliances?
- Creating an Informations Society in Europe
- Information Superhighways the developing US scene
- Regulating competition in Europe
- Selling telecommunications equipment in a liberalising market

### SPEAKERS INCLUDE:

- Dr Martin Bangemann Member **European Commission**
- Sir Iain Vallance Chairman
- Mr Robert B Morris III Managing Director, International Equity Research Goldman Sachs International
- Mr Donald Cruickshank Director General Office of Telecommunications (OFTEL)
- Dr Michael Nelson Special Assistant for Information Technology The Office of Science & Technology Policy, US
- The Rt Hon Lord Young of Graffham Executive Chairman Cable & Wireless plc
- Dr Edward F Staiano President and General Manager, General Systems Sector Motorola Inc
- **Dr Hans Baur** Member of the Board Siemens AG

Arranged in association with the Financial Times newsletter "FT Telecoms Markets" There are some excellent marketing opportunities attached to this conference, please contact Lynette Northey on 071 814 9770 for further details.

Evenin TO BEFFER Manuay at the ffre

The Culity of the tim

Yet for all the campus insights into derivatives trading, global markets and how to harness information technology - not to mention "softer" issues such as leadership and teamwork -management education institutions in the US and Europe are in a hesitant mood. There are tentative signs, to be sure, that demand for executive programmes has picked up and that more young managers may again be prepared to invest in their own futures by embarking on s full-or part-time Masters of Business Administration (MBA) degree. But amid the fracile homes for an early amid the fragile hopes for an early recovery, anxieties remain.

Have business schools yet done enough to dispel their old image of inward-looking io atitutions semi-detached from the real world? If so, bow do they retain the best academic values of the universities from which many were spawned while addressing the pressing short-term needs of their commercial customers? Is co-operation with competitors the only way to achieve critical mass internationally? And like the companies they advise, how do they hang on to, and manage, their own top talent?

At least schools appear to be shaking off one persistent shadow, namely the never-very-convincing argument that formal management education is a waste of time, that there is no substitute for seat-of-the-pants learning.

Few would quibble with the second part of that statement hence the rethink of MBA courses to include more project work and the growth of sbort "company specific" training programmes - but the ever-growing complexity of general management these days and the speed with which new ideas and information flow across national boundaries have also reinforced the value for executives of stepping outside their own immediate working environment from time to

That message, however, now has to be powerfully sold by business schools in a way which was almost unnecessary in the more free-spending 1980s: the marketing of courses of all kinds is an

Though there are signs of a pick-up in demand for MBA courses and executive programmes, management institutions in the US and Europe are still hesistant, writes Tim Dickson

### An image that is blurred by diversity

increasingly sophisticated, various part-time dslivsry time-consuming and expensive mechanisms, notably distance

The extra effort is partly the legacy of a recession which slashed corporate training budgets, reduced through "delayering" the pool of middle managers who traditionally fill most seats in classrooms, and left those remaining in work so preoccupied with the task of self survival that "time-outs" at business school became impractical.

The job market, moreover, became markedly more difficult for graduating MBAs - and salary premiums lsss juicy - requiring schools to invest much more energy in bslping students with their

Even If there is anecdotal evidence of recessionary pressures starting to ease, the direction, scale and sustainability of demand remains far from clear. While top European and US schools are reporting more interest in executive programmes. the extent to which this has affected so-called company specific programmes as opposed to open ones (where participants come together from different organisations) seemingly varies from institution to institution.

The MBA outlook is equally patchy. Professor George Bain, principal of London Business School, concedes that there has been an important shift in the market from full-time programmes to part-time courses which can be combined with a full-time job. LBS reduced the size of its recent full-time intake - "to preserve the quality of participants" - but Prof Bain says the school is experiencing "buoyant" demand for

its (part-time) executive MBA. Prof Leo Murray, director of Cranfield School of Management, says demand for his full-time programme has recently been "much better" - but be agrees that the market as a whole has continued to grow in the UK only because of the

To a large extent, such diversity ahould be welcomed: it makes management education accessible to a far wider range of participants, oot least managers in the public sector (or former public sector) who are much better represented on courses offered by the new universities or former polytechnics than they are in the more established business

On the other hand, the bewildering range of MBA suppliers today - the number of business schools increased fivefold in the UK in the 1980s - has altered the image of what was once a relatively uniform and internationally tradaable passport to business

bs market is no doubt the most reliable judge of quality and the American system of independent bosiness school accreditation sometimes cited as a model far from ideal; nevertheless calls for tougher standards and better consumer protection are unlikely to fade away. "It would be nice to be able to distinguish the real thing, like champagne," says Mr Ludo Van der Heyden, co-deen of

One issue which schools can no longer duck is the changing nature of their relationship with companies. As with all businesses, the customer is getting closer. To some extent this is a funding issue – Insead last year went out to corporate sponsors to build up an endowment of permanent capital - but it is also what big companies increasingly

"In the past businesses looking for a company specific programme wanted just that - a programme, explains one dean. "Now it is a mix of learning, consulting and research.

catalyst for change throughout the whole organisation and would typically be preceded by a lot of

Mr Mike Osbaldaston, chief executive of Ashridge in the UK, says that consultants and management educationalists now often work together. "The dividing line is becoming increasingly hlurred," he suggests. "Whether you are developing individual managers or organisations doesn't matter companies themselves are trying to do both".

Mr Osbaldeston believes that business schools on the whole have thrown off their "remote, academic and insufficiently practical" image, though he says the picture lingers on in some sections of the press.

Neverthelass, formidable challenges remain as schools try to make sense of today's corporate quick-sands, as much for themselves as for their clients. The need to be more international - in terms of students, faculty and course content - is one clear imperative but achieving the right balance has not been easy for institutions with mostly strong domestic roots. Hence the popularity of exchange programmes and alli-ances, a trend which is likely to lead to closer cross-border co-operation between schools.

Business school curriculums, meanwhile, require more than just an international flavour. Much soul-searching has already been devoted to translating the old vertical approach (marketing, finance, economics, etc) into a more integrated, cross-functional teaching style (better reflecting real world problems). The experimentation phase has yet some way to go.

The remaining contents of this survey - which concentrates largely on the MBA rather than company programmes as such - are an attempt to spell out some of these issues for would be participants and

### After the golden age

APPLICATIONS In retrospect, the late 1980s look to have been a golden age for European business schools: betweeo 1987 and 1990, for example, MBA student numbers grew at an estimated com-pound rate of 18 per cent per annum in the UK. Recent trends, though, have been more sobering. Recession, rising job insecurity, and industry and media criticism or the MBA's relevance have visibly checked the expansion of traditional full-time MBA pro-

The questioo now is whether the 1994-95 student intake will turn the tide. So far, the signs are mixed. In the UK Warwick says the number of applicants for its one-year full-time MBA programme increased by 5-10 per cent this year and predicts one of the best classes ever". reporting a 20 per cent increase in demand for the 50 places on its full-time course - "to levels higher than before the recession in 1990". Other schools indicats that there is an increase in the numbers actually signing on of 4 to 20 per

On the other hand, London Business School, the markst leader in the UK, accepted only full-time programme beginning in September, against 180 this time a year ago (a figure which itself was slightly down on 1992). London, which points ont that it still had more applicants than last year, explains the fall by its determination to select only top quality candi-

Insead's September intake of 235 is marginally up on last year with Ms Helen Henderson, the school's admissions director, reporting that candidates are "better prepared and more committed" than at the end of

### Our day-release MBA

### lets you practise what we teach.

At London Business School, we understand that although you may want an MBA to further your career, your commitments won't allow you to take two years off work to achieve it.

It is for this reason that we offer our Executive MBA - a 30 mooth, day-release programme beginning in January each year. The advantage of this course is that on the days you're not in the classroom, you can be back at the office -

applying everything you bave learned to your job and, of course, getting paid to do it. So not only will you be able to beoefit from the Executive MBA Programme straight away, so will your employers. Which is why such a large oumber of our students are sponsored by their organisations.

What's more, because it is a day-release as opposed to an evening course, you are learning when you are at your most alert, rather than trying to concentrate after a hard day at the office.

You will be taught to the same standard, by the same faculty and receive the same degree as the Full-time MBA Programme. And because it's from London Business School, it will rank you amongst the most highly qualified

Applications received by 15 November will be considered for the programme starting January 1995, provided there are places available.

If you would like more information please return the coupon or call the oumber below. For further information, please attach a business card or write/Fax to Mrs Gai Le Roy, MBA Information Officer, London

Street, Carrier and Children

Continued from previous page

the 1980s; IMD considered expanding its MBA class to two sections but is glad it did not: its "conversion" rate is high with only 100 offers needed to fill 83 places this

While part-time programmes have generally held up better to recession, the tentative evidence so far this year is also mixed. The Association of MBAs suggests some employers are more reluctant to sup port their employees with the payment of fees. Reliable distance learning figures are even harder to establish: Amba estimates that around 4,000 new students started programmes in the UK in 1993-94, against more than 3,100 a year before. It is too early to gauge demand for the "class" of 1994-95.

### The big issue is quality

ACCREDITATION Given the proliferation of schools and courses, quality control is now a hig issue in western management education. In the US the American Assembly of Collegiate Schools of Business (AACSB), which drastically revised its criteria a couple of years ago, accredits most institutions offering the MBA and other Masters of Management qualifications,

Europe has no single authority hut the nearest equivalent is the UK-based Association of MBAs (Amba), which administers an accreditation scheme linked to a soft loan programme for UK

Executive Development Program 37th session

Amba has accredited roughly a third of the UK's 99 husiness schools, plus a dozen of their leading continental European counterparts. Last year it accredited a distance learning course for the first time.

As university institutions, UK business schools must be accredited by the Higher Education Funding Councils, which are charged with assessing the quality of teaching and research.

However, the funding councils' approach to inspection and assessment might not be much help to applicants trying to choose a husiness school. For teaching, the funding council for England separates university departments into only three grades, one of which

has not yet been used.

Every English husiness school's teaching is either "excellent" or "satisfactory" according to the council. Had any institution been found to be "unsatisfactory", the third available ranking, there would have been serious questions over its future.

An "excellent" rating is a genuine feather in an institution's cap, but "satisfactory" is very hroad.

### Buzzwords buzz off

BUZZWORDS Business schools are bursting at the seams with huzzwords. "Internationalism", "leader-ship", and "soft skills" are three which are hard to miss on most campuses at the

Kellogg Graduate School of Management

compelling many companies to rethink their strategies. Executives are under pressure to

that many are fads - here today and gone tomorrow. Sev-enty-five per cent of all quality circles begun with enthusiasm in the US in 1982, for example. had been discontinued by 1986. The management writer Richard Pascale neatly illustrated the point in his book Managing the Edge (Simon & Schuster, 1990) with a graph showing the abbs and flows of business fads based on the frequency of citations in academic litera-

### Both sides of the case

CASE METHOD The case study method is the best-known – and now possibly the most controversial - form of teaching in husiness schools. Pioneered in the US and closely identified with Harvard, the term case refers to a written description of a business situation faced by a decision maker at soma point in time. Names, places and other details are sometimes disguised but they are almost always hased on real events and real people.

The case study method has also heen widely adopted in Europe, where the undergraduate husiness teaching approach has traditionally been instruction hased. "We agree that cases are a very good simulation for future settings, says Mr Ludo Van der Heyden, co-dean of Insead, which along with IMD at Lausanne is spearheading a drive to research and publish more cases about European companies. "We find that students remember them

and the concept they are ture of the UK market. meant to illustrate years

Nevartheless. Mr Van der Heyden feels cases should not he over-used, that they are times too long, and that they should be a vehicle for illustrating wider issues rather than reaching a specific solution. "A good case teacher will not discuss a case to death. In the middle of the class he will start generalising and moving away from the case," he sug-

Insead, which also favours the use of simulated games to provide what Mr Van der Haydan calls "a more dynamic and controlled effect," is harness-ing computer and video technology to produce what it calls "business navigation cases". In this way the school believes students can better put themselves in the dilemma of a chief executive - with access to much more information than would be provided by a conventional paper case and faced with a more "real-life like" range of variables.

Recent research by the European Foundation for Management Development - based on a survey of 86 graduate schools that provided 141 MBA or management programmes offering masters' degrees - showed that more emphasis will be put on discussion and simulations and "other methods" during 1994-95 courses, and less on the lecture approach and project work.

### Short of breadth

COMPANY MBAs These are MBAs tailored specifically for a single company and are another peculiar fea-

Very often, part of the course is taught hy company staff, for which credits are given, with

the rest done by a partner business school or university. Academics are often critical of company MBAs. Warwick Business School, for example, takes the view that "singlecompany or single occupation MBA programmes diminish not only that MBA programme but also its value to students".

Warwick argues that "the fulcrum of the MBA's value is its hreadth", hreadth which comes hoth from the way courses are designed and from having a rich mix of class grounds add to the learning experience.

Among those schools active in the company specific field is Henley, with 22 programmes running at the moment for, among others, BICC, Grand Met and Standard Chartered Bank. Lancaster runs single company MBA programmes for British Airways and VSEL.

### The club sandwich

CONSORTIUM MBA This is really a compromise The burdens and a standard full-time or part-time degree open to everyone.

The company variety (see Company MBA) can he criticised for failing to provide the sort of stimulation that comes of having participants from different organisational cultures; some standard MBAs are accused (by employers at least) of being too general and insufficiently relevant to the needs of employees.
The so-called consortium

version is where a number of

companies - often each from a different sector and therefore non-competitors - cluh together to find a programme which is structured round their needs. The husinass school which awards the degree keeps an overall eye on the academic content of the programme,

One of the pioneers of this approach was the City University Business School. More than 20 companies are involved in CUBS' so-called management MBA, including American Express, Lloyd's of London, IBM UK, Anglian Weter Services and Ford Motor Company.

Lancaster runs what it calls a multi-company modular programme for British Airways, Royal Mail, BNFL, North West Water and British Gas, among others.

Henley has recently launched e European consortium MBA administered by its assoclate in Munich. The programme's 15 participants come from three different nationalities and five different pan-European multinationals (Mercedes-Benz, Deutsche Aerospace, Continental, Union des Assurances de Paris and Credit Commercial de France).

### are heavy

The MBA can involve a large financial sacrifice. The cost of a one-year, full-time course in the UK can be well over £20,000, taking account of living costs and lost earnings opportunitles. A two-year course at a US business school could cost a total of some \$80,000.

Business school fees are continuing to rise. although

the pace of increase has slowed down recently, following sevaral years of steep increases. Last year, fees roughly rose in line with

Top US schools, such as Har-vard, MIT, Stanford and Wharton, charge fees of about \$20,000 a year. European schools, which tend to take just a single year to complete, are cheaper. However, a top school such as Insead costs FFr145,000.

Most UK business schools charge fees of around £6,000 to £8,000. But there is e large range, from £5,000 for Heriot-Watt University to £15,000 for

Manchester Business School.

Fees for part-time MBAs are
often more expensive than full-time courses, but the financial pressures on the student are reduced by continuing to

The heavy cost of taking an full-time MBA is one explanation why part-time and distance learning programmes are hecoming more popular. In 1992, more than two-thirds of MBA students remained in employment while studying.

Some of the costs of pursuing a two-year, full-time MBA can be defrayed by getting an internship in the summer vacations. Students are sometimes able to combine studying with part-time work in two-year courses when the work pressures are not too intense.

### The way of the future

DISTANCE LEARNING An almost exclusively British style of MBA delivery at the moment, many experts feel distance learning is the way of the future. For others the very idee of a correspondence course contradicts the classroom teaching and group discussion approach, which they say is the essential heart of this postgraduate qualification Students on a distance learn ing course study from home - usually on their own in the evenings or at weekends - hut they are often assigned a tutor whom they can contact with problems and attend summer schools, weekend seminars. and local support groups. Programmes typically take at least three years - sometimes con-

siderahly more - to complete. The Open Business School, whose teaching material is widely admired, is the market leader in the UK and is expanding into Europe. More than 5,500 managers are studying for its MBA (including about 800 on the Continent). It expects to be providing more than 20 per cent of all UK MBA graduates within two years.

Henley Management College is well-established and was also early into the field. It now has more than 5,000 students on its distance learning programmes, either registered directly with Hanley or through one of the school's 19 associates around the world.

Warwick's 1,000th distance learning graduate will emerge next summer. Another early pioneer, the school has over 1.500 students at various stages of its three- or four-year programme, based in more than 70 countries. Warwick is keen to stress its flexibility, pointing out that students can start on a part-time MBA within travelling distance of the City and transfer to, say, distance learn-ing if moved to another part of the UK or overseas.

Heriot-Watt claims to have attracted more than 8,000 students over the last three years, including students sponsored by multinationals such as IBM, Toshiha and General Motors. The school says its course material is entirely self-suffi-cient and that there is no requirement for tutor contact.

Kingston University, south of London, and Durham University in the north of England are among other schools offer-ing MBAs by distance learning.

the Aston MBA

### BUSINESS SCHOOLS: AN A-Z GUIDE

### for them

continue or realizable

DROP-OUTS Only a very small proportion of students drop out of full-time MRA programmes in Europe and the US. The majority of these are prohehly caused by ill-health: even at the best schools candidates who have passed the admissions test are sometimes forced to leave if they fail to perform

The canualty rate for part time courses and distance learning - particularly the lat-ter - tend for fairly obvious reasons to be higher. Combining an MBA course with a full-time job presents special challenges and the isolation inherent in studying from home proves too much for some candidates.

### ¿ Learning over there

EXCHANGE PROGRAMMES As MBA courses try to become more international, some schools are offering students the chance to spend a term overseas at schools to which they are affiliated. For example, Manchester Business School is affiliated to

40 schools including Kellogg, Chicago and Berkeley, London Business School organises exchanges with 25 business schools around the world.

The demand from students for exchanges, which typically occur in the spring term of the second year, often exceeds the availability of places.

Students generally relish the stimulation of living abroad and studying at a different school for several months. The potential disadvantages of exchanges include incurring extra living expenses and spending time away from the

### Rolls-Royce of the market

EXECUTIVE MBAS Sometimes used in the UK as an alternative title for which takes up to seven years, part-time programmes, the starts three months after the executive MBA is normally completion of the course. the "students" involved. This type of course is also generally regarded as the Rolls-Royce of the MBA market, being aimed at high-flying executives whose companies pay the fees. Particularly popular in the

It's too much US, these courses are typically held on Fridays and Saturdays and in week-long "bites" and field trips. Employers are often attracted by an approach which combines work and theory in a potentially valuable way.

The University of Chicago School of Business is using a newly launched executive MBA programme at Barcelona to spearhead its international expansion. The part-time programme – 10 modules of one to two weeks spread across 18 months – is the first one e leading US business school has offered in Europe that leads to

a degree. The bulk of the first intake which had their first class in July - are from European companies and almost all have at least 10 years of work experience.
London Business School's

next executive MBA course does not start until January hut a spokesman said that inquiries had doubled over the last year. London also belives that companies such as Bankers Trust, Mercury, Blne Circle and British Airways are using flexible options like its executive MBA as a strategy for *retaining* high flying managers. "This, of course, is only feasible in a programme where participants do not leave their jobs".

### What banks will lend

FINANCE

The most popular method of financing a MBA is through savings although bank loans also play an important part. Many countries offer students help in financing MBAs through low-interest,

long-term loans offered to students either with government backing or through private banks. In the UK, Amba administers a Business School Loan Scheme on behalf of Barclays

and National Westminster banks. For students doing a full-time course, the bank will lend a maximum of two-thirds of last salary plus tuition fee

for each year of study at a reduced rate.

Take-up of the loan scheme

is currently running well below levels at the turn of the decade, reflecting an unwillingness on the part of borrowers to take on debt and an unwillinguess on the part of

students without collateral. Students on a one-year course who are not accepted for an Amba loan may be abla to apply for a Carear Development Loan.

Repayment of the loans, which are organised by the Department of Employment with Barclays, the Clydesdale Bank and tha Co-operative Bank, begins three months after the study period is

Some students get financial support from employers, particularly those doing part-time MBAs or distance learning MBAs. Amhe estimates that 60-70 per cent of finance for these courses comes from employers.

Although some employers do contribute to fees of full-time MBAs, they are generally deterred by the likelihood that students will want to change jobs at the end of their course.

### Full-time gets shorter

**FULL-TIME MBAs** The classic model for the MBA, developed in the US, is the two-year full-time programme. While this is still the norm in North America, one year is now much more typical in

Only London Business School in the UK, for example, now offers a two-year course with IESE in Barcelona a rare continentel example.
Manchester (which now promotes its programme as a 12-month minimum, 19-month maximum, or 15-month "standard") and Erasmus-Rotterdam in the Netherlands have both reduced the length of their full-time courses in response to what they say is market demand.

Instituto de Empresa in Madrid runs a 16-month programme including four months' paid internship in a national or multinational company.

Job insecurity and the high opportunity cost obviously have much to do with the latest trend, but London is sticking to its guns. The school believes that one of the problems with a one-year MBA programme is that students are forced to start looking for a job almost from the moment they start their course. More importantly, though, it argues that two years allows time for more in depth study, notably through more project work

programmes split into a set of compulsory core courses (eg finance, marketing, operations management, followed by elective courses (see Optional Courses). Most will include a bank managers to lend to MBA | mandatory in-company project.

with companies.

### Not quite a welcome mat GMAT

Pronounced Gee-met, these letters stand for the Graduate Management Admissions Test, a requirement for most husiness schools round the world. Some institutions (notehly Harvard) have devised tests of their own, but in many cases these cover similar areas of numeracy, literacy and verbal and numerical reasoning as the GMAT.

A GMAT score, or its equivalent, is normally the starting point of any application for an MBA though a good result is not a guarantee to entry. Top schools usually demand minimum score levels of at least 550-600 (out of a maximum, though rarely achieved, 800).
MPT topped a table of US schools compiled recently by the Economist Intelligence Unit with an average score of 680 per student, while Insead headed the European list with an average of 650.

Despite its attraction as an international benchmark, the GMAT is a controversial admissions tool. A growing number of schools refuse to quote their average score on the grounds that it is misleadthat, being only available in English, it is culturally biased. Many schools allow for this when assessing non-white Americans.

Because of these and other

worries, the GMAT has

recently been revised. From this month, candidates will for the first time face two half-hour essay questions designed to test ability to analyse complex issues and argue e posi-tion, as well as the traditional multiple choice questions

divided into several sections.

The test is given four times a year in January, March, June and October in numerous centres round the world. A reg istration form and the GMAT Bulletin of Information, which lists test centres and dates of tests, as well as giving sample questions, can he ohtained from the Educational Testing Service, PO Box 6108, Princeton, New Jersey, 08541, US. In the UK there are a number of independent MBA and GMAT training and preparation cen-

### US and other influences

GRANDES ECOLES The grandes ecoles, which like so much in France can be traced back to Napoleon, are independent of the French universities, but closely associated with and partly financed by local chambers of commerce

through a compulsory payroll tax on employers. Originally set up to prepare children of wealthy industrial ists and merchants for a career in the family husiness, they evolved after the second world war into much more professional and better focused management training institutions, influenced greatly by what was

Today, there are 21 grandes ecoles of management which turn out some 8,000 graduates a year. Students typically follow a five-year general man-

going on in the US.

agement curriculum which starts immediately after the haccalaureat and which is subdivided into two years of classes preparatoires devoted to pre-business school courses, a one-year foundation course and the two-year graduate pro-

gramme proper.
The qualification they receive is generally known in France as the masters in management, and is quite distinct from the MBA. However, Paris-based HEC (through its specialist arm the Institut Superieur des Affaires) and Groupe ESC Lyon are among those which also run MBA courses.

### Information at a price GUIDES AND BOOKS

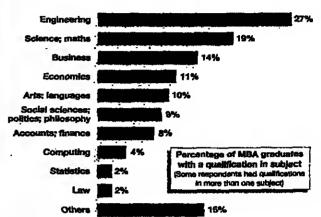

Useful guides include Which MBA?, by George Bickerstaffe, a fact-packed directory of the leading MBA programmes offered by business schools and universities around the world, The sixth edition, just published, is available from the Economist Intelligence Unit, 15 Regent Street, London SW1Y 4LR, Price £21.90.

The UK's Association of MBAs (see Organisations) publishes a Guide to Business Schools, an alphabetical directory of UK and some continental and North American schools, with a commentary by Godfrey Golzen, price £16.99. The UK's Association of

Business Schools publishes a Directory which is issued free to all inquirers. EFMD publications (see Organisations) includes a new edition of its Guide To European Business Schools and Management Centres (non-EFMD members BFr3,500), a European Manage-

ment Development Directory (details of over 350 executive courses from 37 European business schools, BFr6,000), and The Quality Assessment and Accreditation Systems for Management Education in Europe, a 30-page overview (BFr2,000 for non-members). A useful source on US

schools is "The Official Guide to MBA programs" (published by Warner Books). The MBA Career Guide Is a

twice-yearly publication (annual subscription £18.95) which reviews over 100 leading husiness schools. The Guide's publishers (46 Delancey Street, Regents Park, London NWI 7RY) provides a free clearing house service for business schools' own information packs, GMAT training and scholarship advice.

Ex-White House speechwriter Peter Robinson has written an entertaining book - Snapshots from Hell – which offers impressions of his first year studying for a Stanford Busi-ness School MBA. It is published in the UK this month by Nicholas Brealey Publishing, £9.99 in paperback.

### **Positive** contamination

HEALTH SERVICE MBAS The changing state of the health service wrought by the

government's health reforms has, not unsurprisingly, stimulated more interest in management development in the pro-

Health Service MBAs are taught at the university business schools of Canterbury, Durham and Nottingham with health management electives tending to form half of the MBA. Most interest in health ser-

vice MBAs is in part-time study undertaken over two years.

The two-year Northern Health Service MBA at Durham is nearly two years old, having started in January 1993. Average work experience prior to MBA study is much higher than at most business schools - approximately 15 years with the average age of candidates standing at 37.
The depth of work experi-

ence is a considerable advan-tage in boosting academic achievement, says Mr David Stoker, MBA director at the university.
"There is a lot of positive

contamination with the students learning from each other

as well as from the course."

Typically, health electives in an MBA include such subjects Health Information Systems; Comparative Health Care Systems end Health

Across Europe.

Duke University's Fuqua School of Business claims, as part of its weekend executive MBA programme, to be offer-ing the first US programme designed specifically to meet the needs of health care industry managers.

### CHICAGO MILAN

Fully Accredited MBA Programs Since 1846, Saint Xavier University in Chicago has been a leader in American education. Accredited in Paris, Chicago and Milan by the North Central Association of Colleges and Secondary Schools, the Graham School of Management offers MBA classes during evening hours and on weekends. All classes are taught in the English language, with an emphasis on the practical application of business knowledge. Courses and graduate credits are interchangeable among all locations.

### THREE LOCATIONS, ONE DEGREE, M.B.A.

Earn Your MBA in Less Than a Year If you have an undergraduate degree, then you may be able to complete your American MBA with only 36 semester hours. Register for two classes during each of the three semesters per year and receive your MBA in about two years. Or, join the new full time "fast track" program and have an American MBA diploma in half the time.

Learn From International Experts Faculty at the Graham School of Management have extensive "real world" experience combined with the highest level of academic credentials. In Paris and Milan, the people teaching your MBA classes actually work for multi-national corporations and organizations. Areas of study specialization include general management, finance, human resources, marketing and international business. Internships and travel-study programs are also available for MBA students.

### No need for nuts and bolts INFORMATION

TECHNOLOGY The Information Technology MBA aims to teach effective management via the use of IT and to make information systems play a role in corpo-rate strategy. The course runs at the business schools of City University in London and Huli

University. Henley also offers the IT Hybrid Manager MBA which is huilt around the consortium approach and facilitates the interaction between managers from the IT function and from elsewhere in the organisation.

The abilities that it aims to teach are competence in the selection, introduction and development of information systems to a level that will make IT an effective tool of

corporate strategy.
The IT MBA caters for both types of candidate - those ou foil with the nuts and bolts of technology and those who are not. Ms Anne Leeming, director of the IT MBA at City University Business School, where IT comprises half of the course. stresses that a technical aptitude is not essential.

"It is not a technical course. lt is focused on management

Therefore, the constant developments in IT do not invalidate a specialist MBA in the subject. Ms Leeming says that the course has hardly altered since it began in 1989.

### The fish in the pool

INTERNATIONALISM

This is one of today's big business school buzzwords, but there is still debate about what constitutes a truly inter-national approach. When judging whether a school is really international, attention should be paid to student mix. faculty mix, cross-border links (see Exchange Programmes) and course content.
Schools like IMD, London,

insead and Manchester typically attract a high proportion of international students and faculty. Manchester's full time class is roughly 25 per cent UK, 15 per cent other European Union, and 60 per cent rest of the world. IMD pays attention to the size of what it calls "the Anglo pool" - the proportion of

English is the mother tongue. Mr Kamran Kashani, the MBA programme director, says that the "pool" accounts for about 40 per cent of applications but that as a deliberate strategy IMD makes sure that only 25 per cent of its 83-strong class "is in that cluster".

insead's fresh intake last month was 65 per cent western European (of which a surprisingly high 9 per cent are German), 17 per cent from the Nafta countries, and 6 per cent eastern European. The 235 students represent 33 different nationalities.

London Business School, meanwhile, has an MBA class that is 75 per cent "overseas". much the same as last year. Many feel the key issue is

the programme content, though how this is achieved varies widely from school to school. Some add specific international options, others have tried to introduce an international dimension to the

Some European schools have daveloped programmes whereby students can spend terms at up to three different schools and still take the same degree. The link between Cranfield and Groupe SC Lyon in France is noteworthy in this

### **Positions** vanish

In recent years, many newly-qualified MBAs have found it a challenge to find a suitable job.

Companies' cost-cutting and restructuring exercises have removed many of the management positions that MBA graduates aspire to. The management consultancies and financial services companies which traditionally recruited large numbers of MBAs scaled back in the downturn. Even highly qualified candidates from top business schools have suffered lengthy periods of unemployment.
Anecdotal evidence suggests

that there has been some improvement in recruitment levels. As well as some pick-up in interest from financial services companies and consultancies, there are signs of increased interest from non-traditional recruiters, including the manufacturing sector.

However, finding a job requires more effort than it did in the last decade. At a time

Henley Management College in Henley-on-Thames, Oxfordshire, with Professor Ray Wild, its principal

large numbers of employees, some are reluctant to be seen to be actively recruiting MBA students. Although jobs are available, it has become more important to seek them through alternative routes,

such as networking.

One consequence of the difficult joh market is that it has blighted many MBA students' ambitions to change career. When employers are ahla to choose hetween numerous applicants, they tend to opt for experience.

But even when MBA graduates remain in the same career, they are often able to move up the managerial scale. This may be accompanied by a move to a smaller organisation. A survey of alumni conducted by Amba in 1992 found that, before their MBA, 43 per cent were employed in large organisations and 20 per cent in smaller organisations; after the MBA thosa proportions were

The same survey found that around 30 per cent of MBA graduates worked in consultancy and finance. Some 27 per cent of MBAs were in general management, 19 per cent in sales and marketing, 11 per cent in corporete strategy and planning and another 11 per cent in finance and control.

For those employed while studying for a MBA, 56 per cent remained with their existing employer for at least a year after graduating. Of those not employed while studying for their MBA, 40 per cent did not start a job immediately after the course's completion. On average, it took these students 5.5 months to get a job. The real difficulty facing

those contemplating a MBA, particularly a two-year MBA, is that job prospects are hard to calculate at the time they embark on the course. Anyone leaving an existing job to do a MBA is taking a gambla on the state of the job market on grad-

### JOINT DISCIPLINE MBAS

garnish

The latest edition of Which MBA (see Guides) notes that some American schools are offering opportunities to combine an MBA with another postgraduate degree such as law. These joint degrees, it notes, "are becoming increasingly popular among both recruiters and students".
In the UK, meanwhile, there is a tendency to specialism in

some schools. City University, for example, offers five one-year full-time programmes which combine a general management "core" with one of five specialisms (finance, human resources, information tachnology, international business/export and marketing). Other schools have resisted this approach and argue that a particular emphasis can be achieved in the choice of electives or

### The hilt of success

KNIGHTS Sir John Egan (BAA, formerly of Jaguar), Sir Christopher Hogg (Courtaulds and Reuters) and Sir Iain Vallance (BT) all got where they are with the help of an MBA. Sir Graham Day (formerly British Shiphuilders, Rover and PowerGen) and Sir John Harvey-Jones (former chairman of ICI) did not.

Standards are formed from its local networks which promote activities and information among employers. The networks often link with other research and passed onto the National Council for Vocational Qualifications which interested parties in a region such as Training and Enterprise Councils and sets NVQs. The role of MCI is largely opinion forming and quality setting rather than that Chambers of Commerce.

### Block release of dictating specific goals. Which NVQs managers take is for the boss

MODULAR MBAS

This is a term which can best he translated as the management equivalent of a block release course.

Warwick Business School launched such a course in January this year which involves participants being absent from work for 13 intensive one-week "modules" which are spread over about three vears.

One of the most established modular MBAs - designed especially for experienced managers - is run by Ashridge Management College in Hertfordshire.

The emphasis of the programme is on developing leadership behaviour and on helping candidates to acquire the skills that are needed to manage, across international and cultural boundaries.

Henley Management College in Oxfordshire was also early

into the field. Meanwhile, the Judge Institute of Management Studies at the University of Cambridge has introduced an innovative modular structure.

This involves extended periods of full-time study which are sandwiched between suhstantial work experience (for either one or two 12-montb periods depending on the option chosen), where what is learnt in class can be put into

NETWORKING in other words, this is what you know and whom you know. Networking can be all-important for maximising the potential of a business education.

Networking means anything from genteel inquiries in a wine bar to exchanges of CVs and job opportunities via a

graduate association.

By ite very nature, networking is not an organised activity although more structures are growing and many organisations are springing up that are more akin to a recruitment agency than the traditional word-of-mouth image of networking.
Business schools are a useful

marketplace and the largest and best-known centre for Association of MBAs (Amba). Amba membership now stands at around8,000, as it has grown rapidly in the past few

Cranfield School Management is another important source of networks. It is home to the Management Development Advisory Service. Individual schools tend to be a good avenue for networking, whether they offer a definite association or not. Schools

obviously have links with tion of a fair amount of per-business and are often sonal autonomy. They can be approached by companies for recommendations. Alumni associations, however, are also targeted by schools in their fund-raising activities.

Following the recession, networking organisations have also flourished to serve particular specialities in business and industry.

Networking is frequently used to secure work on occasional projects as well as permanent jobs. This pertains especially to technological related work.

### Practice in lieu of theory

National Vocational Qualifica tions are designed to test skills and competence in the workplace and operate in more than

80 per cent of occupations.

They emphasise practical skills within a job and seek a demonstration of understanding of that job's requirements rather than theoretical examinations.

Therefore it is difficult to equate them directly with traditional academic standards. But very roughly an NVQ level 1 is approximately similar to 4 GCSEs, grade D to G; NVQ 2 ranks alongside 5 GCSEs. grade A to C and NVQ 3 can be compared with 2 A levels. NVQs level 4 and 5 are harder to gauge as they are geared towards management compe-tence and require demonstra-

sonal autonomy. They can be approximated with education achieved at higher levels, not necessarily degree standards but beyond A level.

Much of the standards set for NVQs level 4 and 5 come from management standards laid down by the Management Charter Initiative.

The quality of NVQs, which are tested in the workplace and operate on a fairly flexible basis with requirements varying among different occupations, is monitored by the National Council for Vocational Qualifications. The council, which is responsible to the government, approves and accredits the qualification.

Accreditation lasts for five years, after which it must be

NVQs, particularly the lower levels, have been subject to some criticism with the suspi-cion in academic and industrial circles that they cannot be a substitute for traditional

methods of testing knowledge.
The advantages and disadvantages of NVQs versus a more traditional qualification such as the MBA boil down to relevance. Managers may want more practical expertise in addition to straightforward academic knowledge or in some circumstances they may need people-based abilities and utilitarian aptitude in preference to theoretical achieve-

### Amba and acronyms

**ORGANISATIONS** The Association of MBAs (15 Duncan Terrace, London N1 8BZ, Tel: 071-837-8375). Founded in 1967 by a group of British graduates recently returned from leading US business schools, Amba's original aims were to promote management education in the UK and to develop an information and social network for business school alumni.

Today Amba also performs a quality controlling role for UK and continental institutions (see Accreditation), runs an annual reception for business schools and potential recruits,

RFMD - a European forum for information, research and best practice in management development - has in the past discussed the idea of common European standards for accreditation. The consensus now is that Europe is not e single model and that national norms

and mutual recognition are the

Most business schools run

part-time MBA courses; indeed

### A hands-on way ahead. alternative PROJECT APPROACH In their third term, MBA

students often become mini-consultants, dealing with a company's marketing challenges, expansion opportunities, management dilemmas. Alternatively, part-time students may undertake a specific task for their company which will be appraised as part of their MBA. This is the project epproach which forms the practical application of MBAs at almost all business schools. The project approach, which deals with real situations, has prospered in UK business schools.

counterparts. Many managers,

though, find it hard to set aside time to study at the same

time as holding down a chal-

lenging job - hence the appeal

of the modular approach.

It contrasts with the case study approach, championed especially by Harvard busin school Case study methods tend to require a response to theoretical situations; project approaches are the hands-on

alternative. Both are meant to test the student's ability to synthesise the various aspects of the course. They will need to exercise ability in most of the

each one in the given situation | South Bank and Strathclyde)

and act accordingly.
Business schools often invite smaller companies to take up consultancy services from stu-dents undertaking their third term project. For the company it can prove a very cost-effective method of receiving such services from people who are not that far from going into such roles on a permanent

Cranfield School of Manage-ment is unusual in not making the project an obligatory part of the MBA. A full-term project can be undertaken but the school finds that students prefer to take more electives. Cranfield is the only business school to offer an academic year of four teaching terms and according to Mr Colin Gor-don, director of the full-time MBA, students are drawn to the centre because they can maximise their theoretical learning.

"Many have a number of years' experience in work and feel that they benefit more from the various electives. They do some project work that lasts three to four weeks and often feel that this is enough." The proportion of students who do choose to take the full-term project option is

### To manage the state

PUBLIC SECTOR MBAS Aston, Henley, Birmingham and Exeter in the UK offer MBA programmes in public Several others (eg Bradford,

**Employment changes after MBA** 

lay on specialist modules in this area. Cranfield runs a course for the Ministry of Defence which combines the

general core of its full-time MBA with a number of specialist electives.

### Emphasis on experience

QUALIFICATIONS The qualifications required for MBA students have changed over the past few years. More emphasis is placed on experi-ence of work than was the case a few years ago when it was e reasonable rule of thumb among business schools that an MBA was usually bolted

straight on to a first degree. The average age for candidates heginning a full-time MBA is 28; for those on a part-time course it is 30-32 and for those distance learning it is considerably more. Qualification requirements

tend to be a first degree and about three years' experience in work. In exceptional cases candidates with work experience but no degree are accepted by business schools although they only make up about 2-3 per cent of MBA can-

And Mr Roger McCormick, director-general of the Associa-tion of MBAs, issues a general note of caution against business schools willing to accept candidates without work expe-

Changed employer within 12 months 11%

Changed employer within 6 months 28%

rience. "In spite of their ebility, those without relevant experience will probably find that their peers are critical of them." he says.

A GMAT is not a necessity for all business schools. If a candidate does elect to take the GMAT in preparation for an MBA then it is worth remembering that a business school will expect a good result, or a good reason why a high figure has not been attained.

The MBA is a multidisciplinary generalist degree that should not require epecialist knowledge to study for. How-ever, in practice the modern MBA programme is heavily quantitative: anyone with limited skills in mathematics will

struggle,
As for the value of an MBA once thot qualification is obtained. Mr McCormick believes it is a solid foundation

This 6-page guide was written by Tim Dickson, Christine Buckley, Vanessa Houlder and John Authers. Design: Robin Coles. Editorial production: **Gabriel Bowman** 

which will facilitate advances later. "An MBA is generalist which has its use in the long term. It is not intended to provide an immediate springboard but to prepare someone for a role in senior management later on."

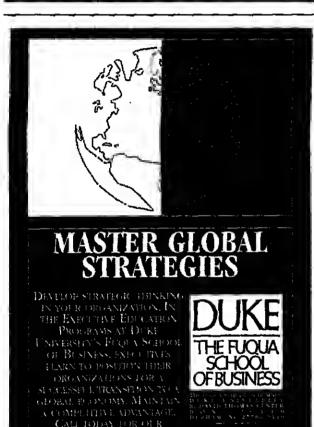

MBAs are not graded. A candidato achieves a pass or a fail; there are no classes as with a first degree. It is difficult to rank MBAs

and Mr McCormick flinches at the thought, although of course business schools have varying reputations and that may have e bearing on employers' considerations.

Specialist MBAs are just

that, an industry or sector-tai-lored qualification. They are not considered of greater value than a traditional MBA. In fact, Mr McCormick warns of the danger of MBAs which are too hybrid, as opposed to a core MBA with speciality components tacked on.

"There is a bit of a trend to tart up specialist MScs as MBAs," he says.

### OK for those at the top

RANKINGS Published rankings have been common in the US for some years - the Business Week survey is the most widely quoted and probably the most reputa-ble - but European business schools have traditionally shied away from league tables. That said, there is a strong view that proper rankings would make a contribution to a more efficient and well-informed market place if the right methodology could be

Most of the attempts so far are superficial, either because they concentrate only on one aspect of a business school portfolio (eg research reputa-tion, MBAs, executive programmes) or because the method of assessment is flawed. Even schools which publicly "knock" tha idea of rankings will use them in their promotional material if they are shown in a good light.

### Rewards diminish SALARIES

The years when MBAs could be sure of a large rise in salary as a result of gaining their qualification have gone. The premium attracted by the qualification has declined, perbaps reflecting both recession and a changing balance in the supply and demand of MBAs. Some students experienced unemployment and pay cuts as a result of taking the MBA.

management consulting and the financial services industry. which was traditionally considered a route to a top salary, cut back sharply on recruitment in recent years. Many graduates have turned to small and medium-sized companies, where salaries are generally lower than those

than in large organisations.

The financial case for the qualification has lessened over the past decade. In the first half of the 1980s, students could expect an average increase in salary of 40 per cent as a result of taking a MBA, according to an Amba survey. By 1991, the figure had fallen to 16.5 per cent.

A later survey, in June 1992, showed that 30 per cent of MBAs earned between £30,000 and £40,000 a year. Seven per cent reported salaries of less than £20,000 and, at the other end of the scale, 8 per cent had salaries over £70,000 and 3 per cent earned more than £100,000. The majority of MBAs were eligible for pension, a company car, private medical performance-related boous.

### Apply early if in need

**SCHOLARSHIPS** BURSARIES SPONSORSHIP

A limited number of scholar-ships and bursaries is offered by business schools. These are usually targeted at people with special merit or need. It is important to apply early for awards, which are often listed

in the school's brochure. Some students are sponsored by their employers to do a MBA. But it may be difficult to persuade an employee to pay the fees for a full-time course, not least because most students contemplate a career have even change at the end of the unemployment course. Sponsorship is generally limited to part-time, distance learning and company One of the difficulties facing programmes in which the stu-MBA graduates is that dent remains in employment.

extending relief for individuals paying their own vocational training bills to graduate and postgraduate courses consistent with level five of the National Vocational Qualifications system - became effective in April

unclear. The concession -

The issue is obviously an important one for business schools at a time of flagging demand for full-time MBA courses. It was also highlighted by an All-Party House of Commons Trade and Industry Committee report which expressed the view that it was "unfair and damaging that individuals paying for training are treated less favourably for tax purposes than companies doing

An Inland Revenue spokesman told the FT earlier this month: "It is up to the training organisation to say whether it (the MBA) could lead to an NVQ." Asked whether claiming relief was worth a try. he replied: "Yes".

### Influx to act as stimulus

UNDERGRADUATE COURSES There is more to business schools than MBA courses.

Covernment statistics show that business studies is the fastest-growing undergraduate degree course. Youngsters, many with vocational business qualifications, are keen to take courses in management and business rather than economics, where numbers are drop

Courses at undergraduate level are still far less popular than MBAs. Last year business studies accounted for 17 per cent of all higher degrees awarded at "old" universities excluding those upgraded from polytechnics in the last two years - hut only 4 per cent of first degrees, according to the Universities Statistical Record.

But the number of business studies undergraduates rose by 9.9 per cent last year, to 17,200, while most "new" universities are offering business degrees. often in combination with other subjects. Universities hope that the

influx of undergraduates will act as a stimulus to improve the teaching of business. However, a business studies degree is unlikely ever to be regarded as a stepping stone for an MBA. Instead, business degrees, particularly from new universities, are intended to provide well-qualified middle

Business schools are also diversifying into providing shorter courses for middle managers later in their careers, often belped by gov-ernment funding for training. For example, Warwick Univer-sity's Centre for Small and its application still remains | Medium Sized Enterprises

operates the "Host Initiative". This takes redundant senior executives from large companies in the area, such as Rolls-Royce and Rover, gives them a training course for a few months to update them on management theory, and then sends them to placements with small companies.

The scheme recently found permanent employment for its 100th executive. This benefits the local economy as smaller companies attempt to fill the gap left by the contracting car builders, and the government will encourage similar schemes elsewhere.

### Entrepreneurs in the making

VENTURE CAPITAL A type of finance which has been of keen interest to MBAs and other business school graduates (though latterly the recession may have dented their enthusiasm). Surveys show that more than 90 per cent of MBA applicants cite career change as a motivation for going to business school and that 5 per cent end up being self-employed after their studies.

Entrepreneurship has been a notably popular optional course (or elective) in recent

### Childbearing disadvantage

WOMEN Many business schools are concerned about the low percentage of women they attract, which is generally less than 25 per cent.

There are some exceptions The schools which recruit the highest percentage of women students are Ashridge at 50 per cent, Monaco at 47 per cent and Toronto at 46 per cent, according to the Which MBA?

Students or prospective stu-dents should be very wary of Before 1976, women were vir tually unrepresented among the UK which are not validated MBA graduates, according to by a university. Amba Grantates, according to Amba Over the next 13 years, the proportion of women tak-ing MBAs grew steadily until it reached about 20 per cent; Regular MBA employers have a good idea which programmes are respectable since 1989, it has plateaued. Explanations for the low proworld which award MBAs on

portion of women vary. Some schools believe it is in line, or even above, the number of women expecting to reach senior management positions. "While women still represent a minority of MBAs, the proportion is relatively large compared with the overall management positions occupied by women," says Amba.

likely to he.

not necessarily follow.

ship of the Chapitre des

Grandes Ecoles though Insead.

one of the best known interna-

tional schools, is outside the

Another explanation is that women in their late 20s - a common age to take a MBA are often considering a break in their career to start a fam-ily. Some schools are trying to promote the idea that women who take career breaks to hring up a family might find an MBA a way back into the job market.

Forty per cent of women managers who responded to a survey conducted by City Univarsity Business School felt that schools could do more to promote the benefits of an MBA to employers. The authors agreed that

schools need to reassure women that an MBA adds value to their careers, and that the difficulties of attendance facing many women at the tra-ditional age of 29-32 should be acknowledged. "Promoting an MBA as something a woman may consider during a career break or moving towards a modnlar system whereby an MBA can be taken over a lon-

ger period are strong options for the future", they concluded.

### WO as new product lines confirm fastest growing company in sector Specialix

Specialix International, Europe's largest I/O systems manufacturer, Is the fastest growing company in its market and will be confirming its position with the launch of two new product lines this nuture.

The new producta are designed to meet demand in new and developing markets where there is little or no competition. First to be launched is Specialix MultiGrafix, a high power multi-user graphics package that will, for the first time, bring Windows and other colour graphical interfaces to the Unix market. There is also a multi-user version for the NT Server market that incorporates Prologue's new WINTlancs software.

The second line of new products, the IHC 5000 and ITA 1000, are directed at the emerging ISDN market. The modular units can be combioed either to make a fully featured ISDN link between LAN servers and workstations, or to provide high speed links between two Novell servers over ISDN. The package will also convert any serial I/O port to the ISDN standard.

Since its formation in 1986, the company's market share has grown more than any single competitor. Specialix is number one in Asia set well as Europe and number two in the world. The Specialix product range now encompasses Intelligent I/O controllers, ISDN and network terminal servers, high power multi-user graphics systems and network printer servers. The fast progression from start up in 1986 to its current strong position is based on the company's commanding competitive advantage which in turn its gained from its innovative approach its innovative approach m its innovative approach solving connectivity prob-**Product Strengths** 

Specialix SI was the crucial development which first differentiated Specially from its competitors. The launch of SI brought the introduction of modular products that allow users to upgrade their installations without discarding their existing equipment. Launched in 1988, SI still has the largest installed base in

More recent innovations have included the advanced intelligent I/O controller system, Speciallx RIO. RIO is undoubtedly the leading technology in this market, uniquely employing transputer technology to create a solution with data transfer rates more than five times faster than that of the competition. The recent introduction of long distance capability over thousands of miles, has further elevated this product's leading position in its market.

market.

Market Share

The world-wide market for connectivity products has increasingly become divided between the two dominant suppliers: DigiBaard of the

US and Specialix. Since its formation, Specialix has continued to outperform the market, taking market share from all competitors. With such a record of growth and innovation, the company has a robust view of the future. Specialix say that they will

maintain progress by constantly developing existing product ranges to stay ahead of the competition and by repeating past success with entirely new products for the company's core businesa connectivity solutions for the server market.

### o-opetition' is the key

of sophistication. Signification. Signification. Signification. Signification. Signification. Signification advertise-coents from Hewlett Packard, which is by common consent the most open of computer suppliers, stress this theme: 'We don't care if your system is made up of HP, IBM, Microsoft, Novell or whatever. We'll make it work'.

By transforming itself from the most technology the industry has positioned itself within the wider world of telecommunications, electronic publishing, education and cateritainment which form the main components of the information Superhighway. All of these other industries understand and practice the 1990s phenomenon of 'co-opetition', or co-operating with one's competitions, and the computer industry has had no choice but to follow sult. on, X/Open has achieved its fundamental objective, ownership of the Unix brand. Unix brand. Unix brand through a succession of ownerships, from AT&T (where it began) to Unix System Laboratories and, most recently Novell, with a large number of skirmishes and occasionni full scale wars along the way. Now, hopefully, with the publication of just over a thousand standard interface specifications, it will be possible to define and develop an industry standard Unix, with subsequent reductions in porting costs for software and applications providers. Turning back to our car analogy, it is just possible that the battle between imperial and metric screw threads is finally over. UniForum UK is trying to go one stage further in the encouragement of standardlation and harmony. As it happens, UniForum UK is a not-for-profit organiantion which consists of a representative board of suppliers and users and users and has approximately 1,200 members. During the past year its three main thrusts have been affillation with other standards for the benefit of both suppliers and purchasers. UniForum UK is already affiliated to a world-wide network of UniForum organisations, and has in the past year aligned itself much more closely with the Commuting Services.

The roots for fulls revised business approach go back over len years to the foundation of the Open Systems movement. Robb Wilmot, who was at the time Chief Executive of ICL PLC, rallied a number of primarily hardware suppliers who wished to break the stranglehold of IBM's proprietary grip on the Industry with the war cry: "Dare to be the same". It became a clarion call for vendents and, in particular, the Unix operating system, which until then had been seen as being primarily of academic significance.

X/Open was established to shift the emphasis on standards from academic to practical conformance and, in particular, to empliasise the importance of portability, or the ability to move applications from une matchine to practice the control of the

Education takes the form of information through a nunthly inagazine. Open Forum, sentings for consultants and the sponsorahip of a brand new exhibition and conferious candidates.

cnce, Enterprise IS, which is being organized by Blenhelm Online at Earls Court 2 from 18th to 20th October. This is designed specifically to show businessmen what is practically available with modern information technology to make companies more competitive in the marketplace.

The third area, the establishment of Trading Standards for suppliers and purchasers of IT, is the most ambitious project of all. It has been achieved with the invaluable help of the government's CCTA division of the Treasury, a number of commercial hardware and sone key users, who have altempted to define a 'balance of fairness' between vendor and purchaser in areas such as a code of practice, mentoranda of understanding, compliance

understanding, compliance and complaints procedures and specimen terms and conditions.

This process, the balance of fairness between vendors and purchasers of IT, is an ongoing one. It is the broader commercial covironment in which technical standards and conformance to specification operate and only if purchasers and vendors are aware of what IT systems can and cannot be expected to deliver will it be possible for systems to be purchased and implemented safely and effectively. Ignorance of customer requirements and system capabilities, coupled with lowest price purchase without regard to system suitability, are primary causes of the computer horror stories which are still all too connonly happening.

A vital management process today is to empower every employee to bring their skills, talents and efforts to bear on the issues that critically affect the success of the organisation.

To achieve this re-engineering, a growing number of major organisations, such as National Westminster Bank, Barcilays de Zoete Wedd, British Telecom, the Department for National Savings, and Welsh Water, use performance or objective management EIS from INPHASE Software Limited. Empowerment means giving every employce the information aeeded to make declsions, as well as the responsibility to implement them, making EIS Everyone's Information System, rather than just an executive information system. In this new world it is vital to ensure that all individuals in course that all individuals are aligned with the organisation's direction. Key performance measures need to cascade down from the corporate vision at the highest level to cover each key process and each individual's efforts.

A range of critical business factors must be defined. Often these are derived from the organisation statements. These critical business factors must be defined. Often these are derived from the organisation statements. These critical business factors must cover a broad range of measures, which is sometimes referred to as the Balanced Business Scorecard. These measures with the organisation, sharcholders, customers, employees and managers. Inevitably, the range of performance measures will be diverse. They will include the obvious financial measures,

Performance Measurement

such as revenue, profit, return on investment, and capital value, but also non-financial measures like customer sails-faction, product quality and service quality, staff compe-tencies, training and retention

The breadth and volume of data required to produce the end measures can become garganitusar. The benefits of using an EIS Immediately become abundantly clear.

An INPHASE EIS offers intultive access to high quality graphical and tabular presentation of all of the measures. The functionality, data access rights and sophistication or simplicity of the user interface can be configured appropriately for each user's specific needs. The presentation of the information can be whatever is most uscful, from maps and trend graphs to lext reports or even video clips.

A utomatic multi-level exception alerting which INPHASE has christened being causal links within the available data, help reduce the screen overload which users otherwise face. One of the stumbling blocks that have dogged the successful implementation of this technology is the rate of change that is must meeded in the EIS to accommodate changes in the key issues of the organisation and like objectives that it must meeded in the EIS to accommodate changes in the key issues of the organisation and like objectives that it must meet. Fast development and low maintenance are provided by employing object-oriented by employing object-oriented by employing object-oriented by employing object-oriented by incuston in a permanent cyntutiunary stage. But cycn this is unly half of the story.

Signalards, whether industry de facto, like Microsoft's de facto, like Microsoft's Windows environment or de jure such as Unix and SQL, make the job casier and faster than having to work with proprietary protocols or ASCII file formats.

Many organisations are reengineering their business
processes and migrating
mainframe applications and
old PC DOS applications into
the Open Unix and PC clientserver, Lan and Wan environments, right-sizing for cost
benefits and improving the
'interoperability' of applications at the same time. This
invariably makes EIS implementations easier and faster
and therefore more likely to
succeed.
Inevitably,
INPHASE/EIS has to accommodate applications which
are currently, and perhaps
always will be, within proprielary environnemis. But even
here, the availability of 'gateways' between OpenStandards and proprietary
data storage file systems and
the adoption of open communications standards, such as
IBM's offering of Open
DataBasec Connectlyity
(ODBC) for its toasinframe
DB2 database, is demonstrating the benefit of Open
Standards to business.

by Peter Marshall, European Technical Support Manager Candle Sarvice Limited

## The Benefits of an Open Approach

The other fundamental requirement for success is availability of the data required for the performance measures to be calculated, and subsequently 'dolled down' into for further analysis. With a requirement for access to virtually any and every computer application for provision of data into an EIS, speed and case of coping with different data sources and changes in those data sources can contribute substantially to reducing the cost of implementing long term successful EIS.

### Banyan integrates Stock Exchange ondon

The London Stock Exchange has chosen Banyan's Enterprise Networking Services (ENS) to provide the computing infrastructure to link its departments. The decision, based on a review of the functional and technical criteria required for the busicess, considered several computer networking afterware solution was computer with Microsoft's Windows NT and Novell's Netware 4.0, the latest in enterprise computing solutions.

As part of this twelve month implementation, the Stock Exchange aims to deliver a core set of services for users and improve communication between different departments. To be successful, the Exchange demands IT infrastructure services that are secure, Acthange has chosen Banyan's Enterprise Vetworking Services (ENS) provide the computing afrastructure to link its partments. The decision, sed on a review of the control o easy to maintain and well proven in the market place.

Alan Healey, a partner at Andersen Consulting, who is managing the project, commented: "Our objective in selecting the Banyan software was to get complete user buy-it. We didn't want any teams to fragment, what we needed was all the users to commit to a single system."

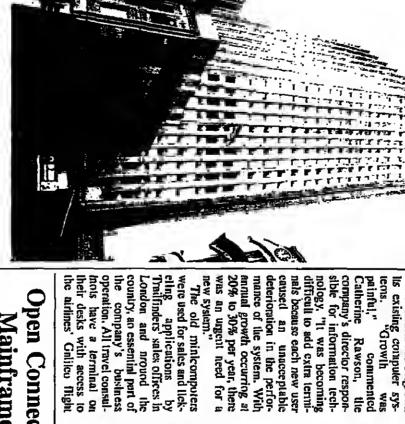

weni on to applain: "In the initial stages of the decision process we considered all the allematives. We found that the other productions of the control of

Bluepoint, the

market, Banyan's enterprise solutions have been around for years, through the

ENS

system."
The Exchange has installed 20 servers and has 715 desk-top computers all running un a new fibre optic backbonc. Banyan's ENS for Netware is running over Novell's Netware 3.12.

Addressing the challenge of Open Systems Management for years, through the VINES product range. Setting a lead in the toarket in 1993, Banyan launched ENS, delivering software to co-ordinate large disparate organisations, independent of tardware und operating

works.

Drawing on its expertise Drawing on its expertise in optimising the performance of IBM mainfrances which it pioneered in the mid 70's with its OMEGA-MON solutions - Candle Corporation has tomsferred its technology in the UNIX world to allow urganisalook after themselves - it can be argued that the shock of discovering the unexpected has created an unnecessarily strong reaction. The ideal way forward is to find a way of marrying the experience of traditional computing with the freedom of open systems, using new management tochoologies and feechnology framefail.

Based on Candle Technologies - an object oriented framework - products have been developed to address the most commonly-expressed networked systems management prohlems: huge programming expense, high network overhead and central points of failure. Among these

The increased flexibility of an open systems environment inevitably has its trade-offs. The advent of large clicnt/server configurations has generated complex systems management issues, primarily centred on costs. As a result, some enterprises are examining whether to return to opainfrant-style centralised computing for certain ioission-critical applications.

Because systems manage.

ability and costs of their ability and costs of their computing and network resources properly for the first time. The Availability Command Center concept provides a map for key business applications and a plan for restoring them to active service when they for Unix, supporting the AIX, HP-UX and SunOS platfonos, and OMEGA-MON for Windows NT.

Matching the investment which global urganisatious are making in open systems with the appropriate with the appropriate enabling and support technologies to optimise those systems is the next hurdle to be jumped in realising the promised benefits of distributed economics. promised benefits of distributed computing. Those IT strategists who fullow this track will deliver an edge to their organisations which others will be hard-pressed to follow.

### Blazing Open Systems 8 trail with

When a company's computer system is bursting at the seams, not many people would suggest replacing it with something smaller. But this is the approach adopted by Trailfinders, the UK's leading flight specialist, when if replaced three mini-Intel-based computer running SCO Unix.
Thailfinders had outgrown its existing computer systems. "Growth was commented Trailfinders needed to run the same applications and also be able to add new terminals to meet the demands of the business growth. It also had to be introduced with the minimum of distractions of the business and ruption to the business - and it had to be up and running before its next busy season which was only a few

painful," Commented Catherine Rawson, the company's director responsible for information technology, "It was becoming difficult to add extra termi-

"The whole thing that drove the decision," said Rawson, "was the porting of the software and the data. All we've really changed is the engine. That was another advantage of using Unix. By using the same terminals we reduced the cost of the new system."

The minicomputers were replaced with a multiprocessor Intel-based CPU to anufactured by Corollary and running the SCO Unix operating system. This handles all 300 terroinals in the Tmitfinders' sales offices as well as providing capacity for the predicted growth. The new system has increased the speed of response of all terminals resulting in inoproved productivity and customer service.

### Windsor and Maidenhead **Open Connectivity solves** Mainframe access at **Royal Borough of**

transparent access to DB2 data but without the restrictions of only DB2 connectivity. Mike Kirby, Head of Computing, commented: The Royal Borough of Windsor and Maidenhead wunled to achieve universal universal to DB2

Information Builders and DB2 Gateway from Micro Decisionware inc. Both met the borough's original criteria, as Mike Kirby further comments: "We wanted to be able to say to our users, 'Here are your familiar OPC tools and here's transparent access to mainframe data - now make use of it."

The trial, managed by Xper'ice, one of the Borough's Direct Services Organisations, brought the issue of product to the fore, as Simon Walker, Xper'ice. Compuling, commented:
"IT strategies continually evolve and looking further alread, we decided it was imperative that the Borough did not restrict itself to DB2 connectivity - we had to make way for a more 'cipen' approach"

The two products put forward for trial were EDA/SQL from conuments: "We were new to middleware and needed to call on holl suppliers for support during the trial. We found Information Builders for support during the trial. We found Information Builders particularly forthcooning in taking ownership of problems: they were just as proactive in sorting out our problems on the PC side as on the Mainframe side."

Mike Kirby concludes: "White we were able to train more technically-minded users to master QMF, we were not nuceting our prinoary objective: to provide all users with fransparent access to DB2 duta. Further to this, we found an additional drawback with the QMF was the drain on mainframe resources: we wanted to be able achieve universal user access without significant impact on mainframe power. "EDA/SQL's existing multi platforio capability, coupled with the company's proven commitment to the highest levels of customer support, satisfied us that information Builthers would

erful and competent operating system. It is capable of being totally customised to manage the system's specific resources, providing personalised functionality to its many users, enabling each of their ju multi-task.

It would be simplicity itself to produce a course which 'blinds its delegates with selence' and which leaves them terrified to go anywhere near Unix. CTEC's aim is to acknowledge the power at the disposal of Unix users and system udioiniatrators, and ...by CTEC, one of the UK's largest suppliers of IT training for end-users of DOS, UNIX and Windows applications guide them to make logical, mitonal and safe decisions when working in the Unix environment.

At its must basic level.
Unix has a lot of work to do when it is satisfying even the most fundamental of the demands of its muny users. If it someone has bought the bare minimum configuration in order just to satisfy their basic needs, then the likelihood is that they will not have bought a machine with the necessary puwer und performance with which to pro-

Those who know Unix respect it for its power and its performance. Those who have heard of Unix know that sconer or later they will need it. And those who have bought Unix know that they really do need to understand it better.

CTEC's training onakes the understanding of Unix more easily attainable. That understanding enables each Unix user to achieve much more of the potential of their Unix systems.

Unix is an extremely pow-

vide any degree of frieudiness or resilience.

Unix users wurking with this configuration will need to be particularly cureful, since Unix will the exactly when they tell it to do! On the uther hand, Unix cun be just as fciently as any other software product. Technology can be applied to catter for resilience, redundancy und survivability, in which case it is easy for users and administrators to become complaced for the continued main-

lenance of their skill levels and then be caught seriously short when even the most trivind of problems arises.

Large organisations may typically have an Information Systems Section or Computer Section which provides technical and system support to the users. Medium to small companies tend to cimploy existing stall in a dual role. They may be part-time fulfiling their operational committing the office, the warehouse or the production line - and part-time imanaging the departmental system. It is likely to depend to some degree on the sustained availability of the Unix systems admitoistrators must be trained to be commeted in

demand service support or
maintain fault reporting

trained to be competent in their duties.

Properly installed Unix-based applicutions should be traosparently available to their users, it shouldn't be necessary for those users to receive specific Unix Iratining. On the uther hand, in order to ecotomise on the effort used in managing a Unix-based system, and he able to use the minimum of resources, it is necessary for at least a nucleus of staff to have fundamental skills.

These skills will include processes.
On more sophisticated systems, there toay be a need for data cummunications skills, network manugement skills, database management skills, office system management skills and/or programming skills. The key issues which CTEC uddresses through each of its Unix courses are safety, scentity and surely-whility. CTEC's Unix courses are which to build each of these inter-dependent aspects of a properly managed vital resource. In today's competitive market place, you can't afford to be without your system for too long.
